Fertilizer Facts No. 20 Second and Third Applications

J. L. MEAD CYCLE COMPANY, CHICAGO, ILL

Growing crops want what they want when they want it.

Like a growing child,-a growing plant has many wants. Nor does it want them all at one time—it wants to be fed and to be fed often.

The next sixty days your crop will want additional plant food, and whether it secures this plant food, when it wants it and as it wants it, will decide whether your crop will be a success or a failure.

Feed your growing crops now, with the plant food which they want.

Give them a second application of fertilizer.

Then a third application of fertilizer.

DO NOT WAFF but write un

The danger of the plant food leaching out and becoming lost is lessened by making light and frequent applications of fertilizers to the growing crops, and in this way almost every pound of plant food is saved.

A crop which had a late start can be helped to crop success by second and third applications of fertilizer.

Write for Bulletin No. 4, on "SECOND AND THIRD AP-PLICATION OF FERTILIZERS" prepared by Dr. R. J. H. DeLoach, Director of the Georgia Experiment Station, which is a full and complete study on this subject. Free on request.

SOIL IMPROVEMENT COMMITTEE Southern Fertilizer Association Atlanta, Ga., U. S. A.

CONTRACT AWARDED

DECISION WAS MADE LATE YESTERDAY AFTERNOON TO LOCAL MAN.

BEGINS WORK SOON

Material Is Arriving Daily and Paving Will Be Started In Few Days.

The contract for the paving between street car tracks in Anderson wa let yesterday afternoon by the South ern Public Utilities company to Mr

W. W. Johnson of this city.

This matter has been undecided for the past several days and many peo ple have been awaiting this decision There were several bids submitted one of them being the Southern Payone of them being the Southern rav-ing company, which has the contract to do the paving for the city. The contractor is only to do the work, the material being furnished by the

street car company.

The Southern Public Utilities company will work in connection with the Southern Paving Construction com-pany in that they will try to work on the streets along with them so that when one is finished all will be

Although the matter of awarding the contract has been delayed for several days, this has not interfered with ma-terial being delivered and it was stated last night that work would begin within a few days since everything is about ready.

Training of Child Is Most Important By MARY E. WYNNE, Boston, Mass.

mind and the body of the child is one of society's most important works and that to do this well the home must co-operate with the school. would seem most apparent facts. But a very large proportion of the fathers are so engrossed in

That the training of the

getting enough dollars to keep body and soul together that they leave the care of the children wholly in the hands of the mothers. The crowded tenements afford little opportunity for real home life.

Home means merely a place in which to cat and to sleep.

There are hundreds of women like the workingmen's wife who said: "I just dreaded Saturdays because the children drove me nearly crazy, but now that a movie picture house has come into our neighborhood I pack the whole five kids off every Saturday and the house is as quiet as on a

In other words, she paid 50 cents a week out of her husband's meager wage to get rid of the sight and sound of her children. Her idea of responsibility to them is t cook for them, to buy their clothes, and when sick to take them to the infirmary.

She represents a large number of parents who think that the chief business of the school is to take the children off their hands for the larger part of the day and to provide a safe place for them to be off the street, but these parents never trouble themselves to know what their children may be learning, nor what habits and ideas they may be forming at school. With multitudes the struggle for mere existence is so stronuous that they have neither the intelligence nor the time for any thought beyond that struggle. Hence poverty is one cause of parents' indifference to the school.

But a far more reprehensible indifference is often found in parents who have had greater opportunities and whose income gives them a chance to think beyond the everlasting demands of the butcher, the baker andworst of all-the landlord. The other day one of these well-to-do mothers said, "If I had time I should visit Jack's class while Miss teaching, for Jack, who has always liked school, this year hates it. But I'm so busy I can't find time."

Then she settled down to embroider her initials on bath towels! So busy she could not get time to find out what influences were being exerted on her boy that were show ug themselves in an entirely changed attitude towards his school life.

Near the end of the ve. r she received notice by mail from the teacher that Jack's work, which had steadily grown worse throughout the year, would prevent his promotion. Jack would have to take two years to do one year's work. The irate mother now found time immediately to visit the teacher, and expressed vehemently her surprise and indignation that her boy, who had always been considered "smart" by his other teachers, should have done so poorly with her.

When the teacher could get a word in edgewise the mother learned that this year Jack had chosen for his intimate associates a group of idle, cigarette-smoking boys whose influence had been most baneful.

"Surely you know your boy's playmates and have seen his himonthly reports, for here they are, bearing your signature." Then the poor mother knew that her boy had lied to her when he said his teacher did not send home reports, and had, moreover, forged her signature. Had she or the father taken pains to visit the school early in the year all this might have been averted.

An intelligent interest in the child's welfare would lead the mother to visit in a friendly way each teacher under whose influence her child comes. Since so little of this is done, one must conclude that another large proportion of parents are stupidly indifferent to the importance of the school upon the lives of their children.

Value of Games to School Children By W. K. SCHULTZE, Cleveland, Ohio

Do teachers and parents sufficiently realize the great and good influence of contests on young people: Every form of game brings the youthful contestants into

learn to act with dignity, to think and speak on their feet. This publicity begets confidence. Contestants are not afraid to hear their own voices nor to see their own shadows.

In after life everything worth while has to be contested for, and the trained contestants win life's prizes. The medal winners graduate into pathfinders, leaders of men and women. Raseball, football, harness racing, cards, chess, dancing, running, boxing, skating, acting, sailing, rowing, swimming, debating, reciting, music, art work, singing, shooting, fencing, tennis, billiards, lacrosse, all develop manhood and womanhood enormously, if sanely enjoyed.

The bestowal of the laurel wreath upon one's brow or the pinning of the medal on one's chest is an experience which is ennobling and encouraging. Pity those who never experience this ecstasy.

Games develop valuable youthful faculties as nothing else doesmemory, the nerves, cw.ion, endurance, bravery, strength, sportsmanlike fairness, sportsmanlike courtesies and application.

Sports inculcate a desire for nice apparel and a handsome bearing The contestant is never a quitter.

The chest which is adorned with trophies is not liable to belong to a thief, backbiter or weakling of any class. No one realizes what it is to win a hard-fought contest in either of the great fields until he finds himself face to face with the test, with a sea of faces looking on.

The moving picture machine will prove of far greater benefit to humanity than a simple amusement and recreation.

I believe that in a few years motion picture exhibi-

tions will be a part of every school curriculum. A moving picture machine is not an expensive article, and in schools where expensive laboratories are impossible the most delicate experiments in chemistry and physics, as well as more intricate sciences, can be shown with as good results as though the professor were to stand before the class and give them an actual

The possibilities of the camera are almost limitless, and in recent years pictures of bacteria have been produced with ease. By the use of the motion pictures experiments with the rarest substances and germs shown only in the largest colleges can be brought to the humillest school and displayed, enabling the students to get a training equal to that of a course in a much better equipped college and at less expense.

Lectures can accompany the films and be read during the progress of the picture, to add to its interest and instructiveness

I am told that the plan has already been tried with great success in some western schools, and I do not doubt fliat in a few years it will be quite the usual thing.
