Senator McLaurin has been announced as a probability for a cabinet portfolio. Having been announced for so many other positions, we shall not give much credit to the rumor till the appointment is made, if ever.

In Tuesday's paper we announced on the strength of the reports in the dailies that Clayton had been appointed to succeed Webster. This was a little premature, and it now seems that it will neither be Blalock nor Clayton.

Judge Gage's decision in the case of the State department states that Helen Stone, the missionary, is still alive.

It is quite likely that other judges will have decided upon the question in a few days. Wouldn't it be a wise thing on the part of the legislature to give more attention to getting the laws passed in a proper shape rather than to spend so much of its time on local legislation?

A year ago when the college rolls of the State revealed a decidedly higher enrollment than at any time for several years past, the increase on every hand was attributed to the rise in the price of cotton. When the still greater college enrollment at the beginning of the present session, when the country was on a great financial strain on account of the lowness of price and the lateness of its staple crop, this "cotton" theory went to pieces and the true cause of the increase was revealed in the increased interest in the State in educational matters. This interest, of course, is due to the realization of the increased demand for educated men and women—a realization that has been met by increased facilities for supplying the demand. There is deep significance in the fact that when a younger brother to-day enters his name upon a college roll he becomes one of a society, if the college students of the State may be so designated, that is about three times as large as the one his older brother joined not more than fifteen years ago. The number of those completing their college course has probably multiplied as much, and a very large portion of this growing body of college graduates has entered the school room. As a result the teaching profession has been greatly strengthened and a general educational revival has been awakened. Better teaching has had more to do with the increased college attendance than better prices for cotton. And upon the class of teaching to be had in the next ten years will depend the college enrollments of the ten years to follow. Whatever is done, therefore, for the betterment of the teachers will contribute to the betterment of all educational work. State, denominational, and private institutions are doing a great work in the preparation of teachers. What the teachers do themselves to build on this foundation will count for as much in the forwarding of the cause of education.
