THE CLASSIC QUESTION.

Principal W. G. Blake of the Spartanburg Graded Schools.

Imitation is a sort of second nature with men, and when it crystalizes into custom or habit, there is created a wonderful potential energy for good or for evil. In China the fashionable woman hobbles about on what has a remote resemblance to feet, because her ancestors have set her the example of pedal deformity. In Europe and America for several hundred years two languages monopolized the curicular of our institutions of learning, and education meant mainly proficiency in Latin and Greek. It would seem now that custom is to the study of Latin and Greek, at most reason has quenched his sleepy lamp; have lieve that no sane freason has ever been given why Anglo-Saxon, French and German, if taught with the same care that is devoted mythological allusion has no to the study of Latin and Greek, earthly connection with that expect the has quenched his sleepy lamp; have lieve that my own appropriate that guages monopolized the curicular mainly responsible for this "linked

forly long drawn out." We would do our Chinese matron an injustice if we supposed she was conscious that it was custom alone that caused her to main her feet. She has reasons valid enough to her own mind for thus doing, however absurd these reasons might be to an unbiased critic. So with this classic fetish. There is no end of argument in favor of a classic requirement for the granting of the A. B. degree in our colleges. In many respects, however, these arguments are but little removed in validity from those of our Chinese friend in favor of her shoe. For example: The Mongolian argues that she must wear her shoes because they keep her feet warm. We say to her, wear larger shoes; the same result is secured, and your feet are saved from deformity. The classicist claims that he must study the dead languages in order to discipline his mind. The answer comes, study with a like diligence the living languages; the same end is attained, and you secure besides most useful tools for practical life work.

It is an easy matter for the classicist to claim surpassing excellence for his Latin and Greek as to their educational value, and he offers an imposing array of facts which seem to substantiate his claim; but when the crucial question is asked, wherein lies the intrinsic superiority of these languages, no satisfactory answer is forthcoming. If the classicist demands that Greek and Latin be placed on an equal footing one in a kundred who, studying acquirement of language, with other studies in the thore them as taught in our colleges, never develop any real enthus as must be a classic course leading obtains any true idea of the richaess and beauty of their literatures from that study. A gramular turns from that study are studied to the same turns from the sam ing on the sand, and no argument can make tenable his position.

In support of the claim that Latin and Greek are superior to anything else as a means of mental discipline, the classicist argues that the most astute scholars, literary or scientific, are those whose minds have been thoroughly schooled in the classic gymnasium. This claim may be true. I am not prepared to confute it. But I am not surprised. I should be amazed if it were otherwise; and yet it does not detract one iota from our argument. We must remember that pure mental discipline in the past, leaving out the mathematics, has been almost wholly confined to the study of the classics; and since mental training is essential to scholastic attainment in any field, to be sure we find the majority of eminent thinkers in the ranks of the classicists. But does that argue that in all the range of human learning nothing not to be acquired by memorizing could be successfully substituted for the dead languages? Take a grammatical rules, by grubbing honest confession here is at least parallel case: Would it be sur- for Latin and Greek roots, or by prising if, in examining the lists of our foot-ball players, we should find that the most eminent athletes in the number had taken the physical gymnasium course while in college? But would the prove that dumb bells, Indian clubs, horizontal bars, etc., are the only possible means by which this physical training may be acquired? Can we not imagine a college department where, instead of the ordinary gymnasium equipment, there are established a variety of machines, which would, when put in operation by muscular power, accomplish some useful work, at the same time giving cles, the brilliant, though unexercises to every muscle in the scrupulous genius of an Alcibody? Surely it would not be a biades, the inordinate ambition of question for a moment as to the an Alexander, I recall my reading superiority of that gymnasium of "Plutarch's Lives"—not in the which, while developing the mus- original Greek-but in the Engcles, would at the same time uti- lish translation. cles, would at the same time utilish translation.
