Wa will be glad to complete this list, and respectfully invite the Clergymen of various denomiations to send in their appointments, and they will be inserted with pleasure among the above.

What the Sunday School Does. TRAINING OF TAS SAS 1. It employes the best men and women in

bors of her "Turnip Townsend," than from all the glory of her Marltoroughs, Nelsons Wellingtons. If the turnip cop is so valu ble to England, how much more so may it be in the Southern States, where they do not have to be pulled or housed? Here are the natural sheep pastures of the world, and with the Buta. Baga and other tunings, to help out the feed, the Southern States can surpass Eugland in the production of wool, as much as they do row in cotton.

To have early garden turnips, the seed should come from a more Northern latitude. Early Dutch Turnips may be sown in January and February, and in August and September for fall crops. Plant in drill, twelve or fourteen inches apart, and thin out to six inches for field culture. Sow, common Tarnips in Au-gust, September and October? The Ruta Baga should be planted in drills, two feet apart, and thinned out to twelve or fourteen inches. The Ruta Baga is destined soon to work a great change in Southern agriculture. They are as easily managed as the common Turnip, are more nutritive, keep much longer, and afford greens equal to collards, if not superior. Stock of all kinds are fond of them, and from their rich golden color, sweet and delicate flavor, are unsurpassed for the table. Farmers, try the Ruta Baga, and learn how it saves the corn-crib! The Ruta Baga is not inclined to seed in this climate; but this is a benefit rather than an objection, as thereby the root keeps sound much longer. Save the seed of other kinds of turnips, transplant them and cut the tap-root off. Seed thus saved, will hold its original qualities for years, but it is the inter-est of every planter and gardener to change seed occasionally.' Seed from Old or New England, Tennesses or North Carolina, is pre-ferable for a change. The turnip delights in a rich sandy soil, but they will grow in almost any soil that is rich enough. Land fresh from the woods suits them best; a piece trod by sheep or cattle yields enormously in turning, and is one of the most profitable of the farm.

Southern Cultivator. Ruta Bagas kept with us this year fit for the able until May .- ED. So. CULT.

TOMATOES .- This belongs to the potato family, and like the potatoe, is found wild in South America. It is of quite recent introduction to the kitchen garden, and now ranks highest among the culinary vegetables. To-matoseed may be planted from about the middle of March through the month of April. They are as tender as beans, and those who would have them early must protect them from frost They may be sown broadcast or in drills, and after danger of frost is over, may be transplanted as safely as cabbages. It is found to improve the quantity and quality of the fruit; to stick the vines, and -train them up on bushes, like the English Pea. The fruit ripens earlier, is not much inclined to rot, and is much better flavored, than fruits that ripen on the ground. To save seed, select the earliest and ripest, mash them with the hand, and wash the phip from the secd, spread the secd in shallow dishes, and dry in the shade ; when thoroughly dry put away in paper bags for future use. The large smooth red tomato is the best for cooking, and the pear and cherry shaped, for

hews. apl 6 pickling .- Communicated by Dr. Camak from Transactions of the Southern Central Agricultural Society. I have and here which little

the community for teachers. 2. It furnishes a circulating library; so that every pupil can have fifty books to read

such year, 8. It gives newspapers to the pupils, with many excellent little stories.

4. It teaches the young to sing, and furnish es singing books to those who need them; B. It gives once a year a delightful pic-nic, or excursion, or celebration, to Sunday school

scholars. (1117.) cessions, bands of music, with eloquent speeches or lectures, and fills the largest churches with flowors, songs and happiness. 7. Children who cannot read, it teaches to read. "S. It offers prizes in the shape of Bibles,

Testaments, and other good books, medals or

D.If the pupils are sick, the good Sunday school teacher or superintendents visit them. 10. It gives fifty lessons a year in that book of books, the Bible.

11. It trains the children in the practice of benevolence, love, obedience to parents, truthfulness, kindness to one another and purity of language. 12. It seeks to lead them to love Jesus and to walk in the path of wisdom. 13. It teaches them the golden rule-to de unto others as they would have others do unto them, the namial merer in the second

AGRICULTURAL, &C.

tan't gloser off very linnips, The Turnip has been cultivated as a garden escalent for centuries, and has been cultivated in field culture in England for the last century, to the great benefit of the English soil, and in the increased production of beef, mutton and fine wool. To such a state of perioction have the English brought the culture of turnips, that they have revolutionized the agriculture of the Kingdom, and the turnip crop of England is annually worth more than the dotton crop of the United States. Lord Townsend was among the first to introduce the field culfure of turnings into England, and with so much assiduity did he combat the strong prejudices of his countrymen, that in derision they called him Tur-

RAISING COLTS .- Never expect to have a good horse if you cram your colt; it cannot be lone .- The old adage in Vermont, "A ragged colt makes the best horse," means everything, Your colt, then, should run with its dam until has reached that condition of the stomach which will enable it to digest solid food. Then take your colt and let it have abundance of free, old air to begin with, and in addition to that, avoid the feeding of grain until it is three years old, as you would avoid feeding brandy and water to your children when they are little. It is astonishing how many nice colts are ruined by the excessive use of stimulating grain food in their infancy, so to speak. I liet your colt mature slowly, its bones grow properly, its digestive functions be properly organ-ized, its flesh in the proper condition-nover fat, horse fat is the poorest fat in the worldkeep it upon the best hay in Winter, and good, sweet pasture in Summer, and you will make the best possible horse of that colt .- Dr. Loring.

SMALL FARMS AND FRUIT - A New York farmer makes the following suggestions in regard to small farms: In many cases where large farms are divided, there is no orchard; But the enterprising beginner may do well by raising small fruits, while his orchard is growing. A neighbor is making more off the Doolittle raspberries, by selling fruits and

plants--both grown on the same land-from a few acres than most men make on one hundred acres by common farming. These and other small fruits may be grown between the rows of apple trees in a young orchard. The grower of small fruits may do better growing strawberries, raspherries and blackberries, so as to have a succession all through the season; thus requiring less help at any time, while business can be better managed and controlled.

a pipel of allowing or instants the state of POTATO YDAST .- Boil one pint of hops in two pints of water, strain the water from the hops, grate five good sized potatoes, put in a kettle, add one cup of sugar, one tablespoonful of salt, one of ginger, boll ten minutes, add more water if too thick. Strain through a colander, cool, add yeast to rise, bottle. It will nip Townsend. England is now reaping more keep, a number of weeks. American Agricul-substantial benefit from the philanthropic, las turalist.
