

They appear to us in about as good taste as a few strains of fiddling would between each para-graph of a prayer. If interlodes must be played, why this continually playing away on the tail end of a tane-why not serve each strain alike and play first one and then another? If there was not a deathless existence to "Dundee" and "Pleyel's Hynn," the sound of their last strain would make us sick at heart.

Manchester Mirror.

BURNS AND SCALDS .- The following observa-tions on burns and scalds, are from the New York Medical Gazette, edited by D. M. Reese, A. M. M. D.

Now, it ought to be promulgated to the pro-fession and for humanity's sake be known to the whole people, that in any case of burn or scald, however extensive, all the acute sufferings of the patient may be at once and permanently relieved, and that in a moment of time, by sprinkling over the injured surface a thick layer of wheat flour by the hand, or what is better, by a dredging box. Every vestage of pain produced by such injuries is instantly removed, and the sufferer not only escapes the shock to the nervous system accompanying such torture but will generally fall into a quiet sleep the moment the atmospheric temperature is thus excluded from the wounds.

In the New York Bellevue hospitals this mode of treating burns has been long in use; till recently as we learn, the same object has been effected at the former institution by the analagous method of covering the injured parts with a mucilage of gum arabic, so as to protect the denuded surface from the atmosphere, and which the surgeons there prefer to the flour in some cases where the weight of the flour becomes an inconvenience.

NOT ALL GONE .- There is likely to be a good deal of hyperbole now-a-days. A New Orleans paper says :

"We may carry ourselves as a nation as lofty as we choose, but we cannot purchase another Daniel Webser. That's a thing impossible. The earth might be searched from the Orient to the Occident without finding any one at all approximating his intellectual statue."

Nature never dies. It may be difficult to fill up just exactly Mr. Webster's mould; but let us have need for exactly such a man, and he will doubtless be produced. We should not like to believe that our stern mother Earth has exhausted herself, and that what she had done may not at any time be done again.

Gray's Elegy, which Mr. Webster quoted in his lasy moments, says:

"Full many a gem of purest ray serene The dark unfathomed caves of ocean bear:

Full many a flower is born to blush unseen, And waste its sweetness on the desert air.'

And that is no doubt quite true; and many a man with the power of a Webster lies in the "dark unfathomed caves" of very humble life, because there are no circumstances just exactly fitted to drag him to the surface. Let us deplore the loss of our great man, but not with the despairing thought that in him all that was great has disapared from the world forever .- Mobile Tribune, - -------

A. J. Benson the projector of the Guano, ty Ation, has applied to Congress for indemnisum of \$2,5000,000.

met ed a. estadechmidt, (Jenny Lind,) has purchas-+here. ear Dresd n, and purposes residing that general attention which it merits I rue, many are devoting all their tune and energy. to the rai-ing of fruit, and realize large profits from their orchards; but every farm should be well supplied with the various kinds of fruit trees, and each farmer have the pleasure of eating the fruit of his own cultivating.

In setting out an orchard, select a spot of ground, say two acres, (it makes no particular difference on what part of the farm, provided it suits the convenience of the farmer,) that is under good cultivation; make the ground mellow, by plonghing, sub-soiling and harrowing; then furrow it out, each way, with the plow, making the forrows thirty or thirty-four feet apart. After the ground is prepared in this way, dig the holes (of course where the fur rows cross) large, say six feet in diameter, and eighteen inches deep, so that in setting the trees, the roots can be placed in their natural position.

In transplanting, it is necessarry to have many persons, one to hold the tree steadily in in its proper place, while the other places the soil around it; this soil should be from the compost heap, or that taken from the hole may be used, if thoroughly mixed with well-rotted manure. The tree should be set about as deep as it stood in the nursery.

In selecting fruit-trees, especially the apple, care should be taken to procure the varieties that produce best in the section where they are to be transplanted, for while some kinds yield well in one region, they are nearly worthless in another. The trees should be two or three years old, from the bud or graft, when set in the orchard. The usual time for transplanting is in the spring and fall, the former we recommend, yet soms prefer the latter.

It is a well-known fact that the apple tree does not arrive at perfecton in one or two seasons, but that it requires years to attain its growth ; therefore, after the orchard has been set out with labor and pains, the farmer must not think his work finished, and that the trees will hereafter take care of themselves, and in due time produce a bountiful harvest; but year after year he must not only stir the ground, and keep it loose, but also feed it well with manure. Besides, there are those vile creatures the caterpillar and horer, who not only inhabit, but are ever endeavoring to destroy the orchard; they must be routed from their pleasant abodes and slain without mercy.

When necessary the trees should be carefully and judiciously pruned with the saw, and not with the axe. Fruit intended for market, or winter use, should always be gathered with. out bruising, as this is essential for its preservation .-- Cor. Dollar Newspaper.

NEW CURE FOR FRVER AND AGUE.-The Huntsville (Texas) Item, says:

"We had a call this week from Mr. DeBerry, of Grimes county, who we understand is about to publish a paper in Anderson. From among other interesting items of imformation we glean. ed from him, perhaps the following remedy for chills is worth printing: Take a raw egg, break in a tumbler, cover with vinegar, and drink altogether an hour or two before the chill's time of calling. Mr. D. says he has seen it tried for years, and never yet saw a failure. It may seem a hard dose, but it is not half so had as that villainous French invention, quinine."
