POPULAR SCIENCE.

The Attoch bridge, in Brit'sh India, when completed will have five spans, two of 508 feet cach and three of 257 feet. It will be entirely of iron. The conjunction of two heavenly bodies in eclipses of the sun and their opposition in eclipses of the moon have io induence, M. P. Denza states on the magnetic elements of the earth.

For a period of forty-four years none of the men employed in a Ger-man ultra-marine had been observed to saffer from consumption. The immunity of the employes is attributed to the constant production of sulphurous acid by the burning of sulphur in the course of the making of the ultra-

mar ne. Brohme's experiments seem to show that in the plant there are two operations taking place-making sugar from carbonic acid and the conversion of the same sugar into starch. This is not a very new fact, however. It is well, though, to be reminded of it now and again, if only for the sake of refreshing the memory.

The number of eggs varies greatly in different animals, as it is in proportion to the risks during development. Thus, the eggs of aquatic tribes, being unprotected by the parent, and being largely consumed by many animals, are multiplied to prevent extinction. The spawn of a single cod contains millions of eggs; that of the oyster 6.000.000. A queen bee, during the five years of her existence, lays about 1,000,000 eggs.

Take a slim glass tube, eight or ten inches in length, closed at one end, and as large as your finger, or, as one might say, a gliss tube a little larger than the usual style, put in an ounce or two of oil, paste a pie e of paper on the outside of the glass so that its lower edge will be even with the top of the oil: add to the contents of the tube two or three times as much soft water-as the suspected sample, and shake the whole well up for several minutes. When the mixture has settled, which will take an hour or wo, the contents of the glass will be divided into three parts. Below the oil will show, above will be the oil, and above that again the water with the alcohol absorted from the oils.

TOM THUMB.

Additional Incidents in t' e L'itt'e Man's Life His Two Visita to Queen Victoria.

It was in November, 1812, that the great showman, P. T. Barnum, first heard of the general. Tom Thumb was then fourteen years old, two feet high, weight less than sixteen pounds, and was considered the smallest child for his age in the world. He was perfectly formed, bright-eyed, had light golden hair and ruddy cheeks. He was very bashful, but, with a little coaxing, would talk with any one. When Barnum first engaged him he agreed to give him \$3 a week and traveling and hotel expenses. His first public appearance was in New York on Thanksgiving day, December 8. 1842, at the American Museum. At the expiration of the first engagement Barnum made another contract with the general for one year at \$7 per week and expenses for himself and mother, but before the expiration of the contract he had become such a great favorite that Barnum increasel his salary to \$20 and afterward to \$50 per week. He was taken to Europe in 1844, where he appeared before all the crowned heads, and from them he received valuable tokens of regard and esteem. At this time he was fourteen years old, but was advertised by Barnum as twenty-one years old. All Europe, from the nobility to the peasant, seemed to have a perfect The craze to see him, and Barnum, in his "Life," speaking of the success of Tom Thumb's first visit to Europe. says : "The word of approval was, in-deed, so passed around in high circles that uninvited parties drove to my door in crested carriages and were not. admitted." When first presented to' Queen Victoria the general exclaimed, 'Good-evening, ladies and gentlemen." A burst of laughter followed the salutation, in which the queen heartily joined. When asked by her majesty how he liked the royal paintings, he replied that they were "first rate." It is customary in leaving the royal presence to back out, and the general and Barnum were both given lessons in' the art by the lord-in-waiting before they were admitted to the palace. Barnum, in speaking of the way in which. they left the queen, says :

"The lord in waiting was perhaps: mollified toward me when he saw me following his illustrious example in retiring from the royal presence. He was accustomed to the process, and therefore was enabled to keep somewhat ahead (or rather aback) of me, but even I stepped rather fast for the other member of the retiring party. We had a considerable distance to travel in that long gallery before reaching, the door, and whenever the general found he was losing ground, he turned around and ran a few steps, then resumed the position of 'backing out.' then turned around and ran, and so continued to alternate h's methods of getting to the door, until the gallery fairly rang with the merriment of the royal spectators. It was really one of the richest scene: I ever saw. Running, under the circumstances, was an offense sufficiently heinous to excite the indignation of the queen's favorite poodle dog, and he vented his displeasure by barking so sharply as to startle the general from his propriety. He, however, recovered immediately, and with his little cane commenced an attack on the poodle, and a funny fight ensued, which renewed and increased the merriment of the royal party."

At the second visit of the general to lutely avoided. The Good Old Times.

The more you find out about the much vaunted "good old times," says an English paper, the better pleased you are not to have lived in them. The people did not only live like dogs but they fed like hogs. A pauper in a workhouse would kick now at the meal which a noble used to devour then. The roast beef of old England was unheard of : beef was only eaten salted and boiled, and bread was a great luxury, not in common use even by the nobles. The records of the Percy family, in the time of Henry VII., show the extreme coarseness of the mode of living, and an extract or two from the household book of that famous family will give a good idea of the manner in which the most famous noble of the time lived. The permanent household numbered 166 persons and the average of guests was fifty, and the whole of the washing for these 216 persons was for one year 40s., a sum probably equal to \$2 in the present day, most of which was for the chapel

linen.

From midsummer to Michaelmas was the only time they indulged in fresh meat, and the instructions say: "My lord has on his table, for breakfast, at 7 in the morning, a quart of beer and wine, two pieces of salt fish, six red herrings, four white ones; and on flesh days, half a chine of beef or mutton boiled." At dinner, men ranking as knights had a table cloth, which fore sowing time harrow it thoroughly. was washed once a month; and as A dressing of finely rotted manure they had no napkin; and the fingers were extensively used in feeding, this portion at least of their linen must have been in a sad condition. Until the thirteenth century, straw was the bed of kings, and before that date the throw a coverlid over the sleeper; then | should be covere | with a brush drag. another was used, and the persons undressed, their linen being substituted "lief sleep in a woolen," which shows that such a thing was done even in Shakespeare's time. The use of nothing but coarse dirty woolen next the skin, seldom changed, and the heavy, exciting nature of highly-salted food, on which all lived, of course tended to produce those diseases for which hospita's were founded all over England, hospitals for leprosy in particular abounding.

Victims of Temerity.

The suicidal recklessness with which Captain Webb threw away his life recalls the words of Shakespeare: "- ha die 1

As one that had been studied l'o throw away the dearest thing he owned As 't were a careless trifle." The earliest records contain illustrations of the same temerity. There is Milo, who, to show his strength, attempts to rive an oak by sheer muscle. but is caught in the tree and is devoured by wolves. In later days there is Green, the aeronaut, who attempts a descent from a balloon by the use of a parachute and is picked up a corpse. There is Sam Patch, of Genesee Falls notoriety, who was possessed with a mania for dangerous leaps, his compensation being fame and a collection taken up in the crowd. Like Webb, he became the victim of his own folly. During my boyhood Sam Patch was rather a distinguished character. I was then living at Sandlake, and well remember that Isanc B. Fox (who was then a leading business man) returned from a Western tour and mentioned that he saw Sam Patch take his list leap. He stood on a plank projected over the falls, and a breathle's multitude saw him take his farewell to life, dying as the fool dieth. No one has since then essaved the

The cow does not eat as much, than they used to be. It is no longer for one thing; and another is, part of what she does eat goes to repair the meet low down, but it is good form to waste of her system in withstanding tie them back so that one may look out Her owner, wishing to leave the place. the effects of the storm and that keeps a per cent. out of the milk pail, until she has recovered from the effects of such exposure. It is also true that a cow, affected by short feed or painful exposure, not only loses in the quantity of her yield of milk, but in the amount of fatty matter it contains. In a word of whom the record of travelers in the nature has so organized the cow that dark continent gives rather a picturshe revenges herself on her owner's esque glimpse than a complete and pocket, for cruel neglect and short satisfying description.
