

Free Round Trip to Charleston The Retail Merchants Pay Your Fare.

Out-of-town shoppers may come to Charleston, stay from one to five days, attend the theatres, visit the island resorts, etc., do buying and have their railroad fare paid for the round trip. The only conditions to be complied with are: First, that your combined purchases amount to \$25 or more. Second, that you come from a point twenty-five miles or more distant. Third, that your fare must not exceed 5 per cent. of your total purchases.

The merchants of Charleston carry large and well assorted stocks. The matter of selection is easy; you have a variety to choose from. Their stocks are kept fresh by being re-stocked often. Prices are very reasonable, considering quality.

The following merchants are members of this refund plan and will be very glad to serve you.

Fourth—That you must buy a round trip ticket or get a receipt from your railroad agent at your home station, showing that you purchased a ticket.

If you cannot find what you want in your home town, remember you can always get it in Charleston.

NORTH IS BOOMING

Progress On All Sides—Local Affairs of Interest.

North, the progressive town of the northwestern part of Orangeburg county, is enjoying a boom—the noise of the hammer and saw can be heard on all sides. Among the many new buildings going up is the brick store of Mr. W. A. Johnson. This store when completed will be one hundred feet long and a credit to the town.

The brick stores being built by Mrs. L. E. Harley will be completed about July 15th, and will make quite an addition to the business portion of the city.

Dr. T. A. Jones will soon commence work on his two-story brick building. The foundation has been completed and the brick has been hauled to the lot. The Masons will make use of the second story while the lower floor will be used by Dr. Jones for his office and drug store. This will be North's second drug store.

Brick are being hauled to the lot of E. C. Johnson, where he will build a large store. It is understood that this will be three stories. The first floor will be occupied by the People's Bank and the postoffice. The second and third floors will be used for a hotel. This will be a very fine building when completed and one that any town could boast of.

The residence of J. H. Woodbury will soon be completed and will add much to Livingston Heights—one of the prettiest residential sections of the city.

Mr. J. C. Price is having his residence remodeled and will have made several improvements when it is completed.

Mr. Paul Argo is building a cottage in the southeastern portion of the city.

Mr. J. D. Dougherty is having several front rooms built on to his cottage, which will give it a very pretty appearance.

The Woman's Missionary Society Baptist Church held their monthly meeting Tuesday afternoon at the church. The following delegates were appointed to attend Missionary rally at Orangeburg next

Friday and Thursday of next week. Mrs. H. S. Pickling, Mrs. J. S. Craft, Mrs. J. H. Edwards, and Mrs. J. L. Reeves.

Miss Isabelle Wannamaker has returned to Orangeburg after spending some time with her relatives, Mr. and Mrs. J. M. Knotts.

Miss Julia Robinson is visiting relatives in Charleston.

Miss Eleanor Edwards of Winthrop is home for the summer vacation.

Miss Vastine Caryell is home for the summer vacation after a year of very hard work at G. M. I. C. Milledgeville, Ga.

Miss Ethel Jones is home from Winthrop to spend her vacation.

Miss Mable McCormick has returned from Spartanburg and brought her friend, Miss Nellie Cash, whom she has been visiting.

Miss Norma Davis has returned home from Spartanburg after a pleasant visit to her friends. It will be remembered that Miss Davis is a recent graduate of Columbia College.

Dr. S. F. Williams, of Cordelle, Ga., and his son, Grandin, of Macon, Ga., is on a visit to friends and relatives. The Doctor is formerly of this place but moved from here about ten years ago. This is his first visit back here and he has been very busy renewing old acquaintances.

The local telephone system has extended a party line to Woodford, with the following subscribers: Dr. Nelson, Rev. T. L. Belvin, A. Z. Stroman, W. E. Ulmer, D. D. Grant, Dr. J. G. Salley, store and residence, J. W. Bair, B. K. Robinson and Willie Senn. This is a big improvement to the system and gives the exchange about sixty-five phones. It is believed before the present year is past we will have an exchange of one hundred phones.

Notice for Special Tax Election.

A petition having been filed as required by law, an election is hereby ordered to be held in the graded school building at Holly Hill, district No. 8, Orangeburg county, South Carolina, on Thursday, June 29, 1911, for the purpose of voting on the question of an additional special tax of 4 mills to be used for school purposes in said district. Said election to be conducted according to section 1208 of the school law.

Dr. J. L. B. Gilmore,
J. Francis Folk,
L. F. Bunch,
Trustees.

Notice of Final Discharge.

Notice is hereby given that I will file my final account as guardian of Gladys U. Millican, a minor, with the Judge of Probate for Orangeburg County, on the first day of July, A. D. 1911, and will, on that day, ask for letters of discharge as such guardian, the said minor being now of age.

M. E. Zeigler,
Guardian of Gladys U. Millican.
Dated: May 30, 1911.

Notice of Discharge.

On the 12th day of July, 1911, I will file my final account as Guardian of John P. Simmons, with the Judge of Probate for Orangeburg County, and will thereupon ask for my final discharge.

Ada V. Simmons, Guardian.
June 13, 1911.

Falls Twenty-Eight Stories.

The financial district of New York witnessed a gruesome accident at its business hour Friday afternoon when Wm. Anderson, a stone cutter, fell from the twenty-eighth floor of the Bankers' Trust company building. The body which was horribly mangled, lay in front of the Wall street entrance of the stock exchange.

FACTS ABOUT MALARIA.

How Mosquitoes Breed the Disease and Its Prevention.

The Department of Agriculture is continually getting out bulletins for the farmer, concerning various topics of interest. Among the recent bulletins was one prepared on the subject, "Facts About Malaria." The disease, known as malaria, is caused by parasites that enter the blood, and feed on the red cells. Warm climates are peculiarly conducive to malaria, and it is chiefly in such climates that malaria is worse. These parasites multiply very rapidly and in a short time millions of them are in the body. It may happen that after having been treated a person thinks he is free from the disease, and has killed out all but one of the parasites, but this one may multiply and give him fever again. The fever itself is not so dangerous as is the fact that it weakens the body, leaving it an easy prey should death approach in another disease.

The way these parasites are carried about is chiefly by the anopheles mosquito. This mosquito having fed upon a person already infected with the malarial parasite, gives this parasite to every other person he bites. This mosquito seldom bites before sundown and there are two ways of distinguishing him; by the way he holds himself upon the wall, usually the body of a mosquito is parallel to the wall upon which he is standing but this mosquito's body leans away from the wall at an angle; then the wing of this special mosquito is spotted.

These mosquitoes seldom travel more than half a mile from their breeding place, and that is why some regions are said to be malarious.

There are three different ways to fight this malaria. First, by mechanically protecting yourself from the mosquito by screens, nets, etc. In Italy, where the disease was especially prevalent several years ago, it became a rule that persons had to wear veils and gloves in some districts. By this means of mechanical protection the malaria rate was reduced from 65 or 70 per cent down to 14, but here it remained. The second method is that of exterminating the mosquito. Take care that all cans of water, pools of stagnant water, and even the backwater of a running stream, be watched and guarded. There are many ways of killing the mosquitoes, two simple ways being to pour oil or throw lime on the waters where they are breeding. The third method of fighting malaria is that of systematically treating the malarious infected district, usually with quinine. In Italy, free quinine was distributed by the government, usually prepared in some chocolate or other sweet confectionery. By this method the malaria rate was reduced to 4 per cent. Dr. Ronald Ross, the discoverer of the relation of malaria with the mosquito, advises that an adult patient take five grains of sulphate of quinine every day for four months, together with whatever details of treatment the attending physician should direct.

Dr. Ronald Ross, the discoverer of the relation of malaria with the mosquito, advises that an adult patient take five grains of sulphate of quinine every day for four months, together with whatever details of treatment the attending physician should direct.

There are three different ways to fight this malaria. First, by mechanically protecting yourself from the mosquito by screens, nets, etc. In Italy, where the disease was especially prevalent several years ago, it became a rule that persons had to wear veils and gloves in some districts. By this means of mechanical protection the malaria rate was reduced from 65 or 70 per cent down to 14, but here it remained. The second method is that of exterminating the mosquito. Take care that all cans of water, pools of stagnant water, and even the backwater of a running stream, be watched and guarded. There are many ways of killing the mosquitoes, two simple ways being to pour oil or throw lime on the waters where they are breeding. The third method of fighting malaria is that of systematically treating the malarious infected district, usually with quinine. In Italy, free quinine was distributed by the government, usually prepared in some chocolate or other sweet confectionery. By this method the malaria rate was reduced to 4 per cent. Dr. Ronald Ross, the discoverer of the relation of malaria with the mosquito, advises that an adult patient take five grains of sulphate of quinine every day for four months, together with whatever details of treatment the attending physician should direct.
