WHAT IS SELF-RISING FLOUR?

This is a question often asked by women—just what is self-rising flour? From what is it made and what are the advantages in using it?

Well, first of all, self-rising flour is a soft wheat flour to which the miller adds pure monocalcium phosphate and bicarbonate of soda, which is really baking powder, and salt for seasoning. So it is after all a ready prepared or pre-leavened flour.

Using self-rising flour in the home three times each day has many advantages. The greatest thing about it is its dependability. In fact, self-rising flour gives the only source of a uniform biscuit 365 times a year. Do not add baking soda or baking powder to it.

When a woman mixes soda and buttermilk, she has no way to tell accurately about the acidity of the buttermilk without taking it to a laboratory, and if she wants to have a first-class biscuit, the soda and buttermilk must neutralize each other. In the self-rising flour the leavening is accurately proportioned by weight and on a basis of a minimum, whereas, the other way is usually a maximum and guess work at that.

Self-rising flour is economical for all baking purposes. In addition to the saving in the purchase of baking powder, soda and salt, it also saves eggs. The leavening is so generally distributed that it does not require so many eggs. In the original recipe for the standard 1-2-3-4 butter cake, four eggs are required if using plain flour. Substituting self-rising flour in the same formula requires only two eggs. Use one egg to every one and a half cups of self-rising flour.

You can take any of your own favorite cake recipes and change it into a self-rising flour recipe. Use one whole egg or two egg whites to each one and a half cups of flour, and add one tablespoonful of liquid for each egg omitted from the original recipe. Omit all baking powder and soda. Do no unnecessary beating. Do not let batter stand after mixing. Bake at the correct temperature.

The most common mistake in baking cakes is in having too hot an oven. Keep the oven at 350 degrees F.

MASTERS SALE

Under an order of sale for foreclosure issued June 4th, 1930 on complaint made April 22nd, 1930 by W. B. King vs. James Purdie McNeill, et al., Judgment Roll No. 7739 Court of Common Pleas for Horry County, S. C., The Master will sell at public vendue before the Courthouse door at Conway, at 11 o'clock a. m., on Sales day, July 7th, 1930, the lands hereinafter described on the following terms: The highest bidder, before his bid is accepted, will deposit with the Master on his bid in Cash or Certified Check, the sum of \$200.00. The proceeds of sale will be applied to the costs allowed, and to debts found due amounting to \$4,101.21, plus interest and costs hereafter to accrue; and to the payment of the owners in distribution. Purchasers will pay for papers and stamps. The terms of payment are: CASH.

The lands so to be sold are situated in Horry County, South Carolina, are sold as the lands of James Purdie McNeill, and are described as follows: All and singular that certain of and part of land, situate in the Town of Conway, County of Horry, State of South Carolina, containing one-half (1-2) acre, more or less, known and marked on the plot of the said Town as Lot No. 269, bounded Northwardly by Seventh Avenue; Eastwardly by Elmwood Street; Southwardly by Lot No. 255 known as the Galbraith property; and Westwardly by Lot No. 270; being the same premises conveyed to me by George F. Nissen by his deed of date the 1st day of September 1917.

J. O. NORTON,
Master.

W. KENNETH SUGGS,
Plaintiff's Attorney.
619-8th.

She Caught Him.
The young lady confronted him with flashing eyes.
"What did you mean," she demanded, "by kissing me as I lay asleep in the hammock this morning?"
"But," protested the youth, "I took only one."
"You did not. I counted at least seven before I awoke."

Naturally.
Father—You want to get married on fifteen dollars a week! What are you thinking of?
Son—The girl.

Makes Life Sweeter

Too much to eat—too rich a diet—or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalize the acid. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check all acidity; or neutralize nicotine. Remember this for your own comfort; for the sake of those around you. Endorsed by physicians, but they always say Phillips. Don't buy something else and expect the same results!

Second Drunk: "I'll shay so; I thot I'd split when she trow de axe at me."

Electric Refrigeration Helps Dairyman

<p>MORE WORK—BUT LESS PAY! IMPROPER COOLING RESULTS IN LOWER MILK PRICES</p>	<p>LESS WORK AND MORE PAY! LOW BACTERIA COUNT BRINGS "GRADE A" PRICES</p>
---	--

Mechanical refrigeration of milk is increasing profits and decreasing the work of dairymen throughout the country. By retarding the growth of bacteria, this form of milk cooling is enabling the dairy farm operator to obtain Grade A prices for his produce and by eliminating the muss and extra labor that goes with both ice and running water cooling, electrical refrigeration is providing the dairy farmer more time for other chores and leisure.

In a statement advising dairymen to adopt modern means of producing a higher quality milk, which brings better prices and meets the demand of boards of health, William M. Nulton, Jr., field secretary for the New Jersey Guernsey Breeders' Association, stated that dairymen dealing with one milk distributor alone collected \$300,000 in premiums in one year for furnishing milk of very low bacteria count.

The low temperatures produced by the mechanical refrigerator result in a rapid cooling of the milk and consequently a prompt check to bacterial development, according to the Guernsey authority. With the possible temperature of 50 degrees Fahrenheit, or less, it has been found possible to keep milk for long periods without spoilage, he said.

Many dairymen have retired their investment in automatic milk cooling equipment with the premiums they obtained from the Grade A milk that the new coolers made possible, according to officials of Frigidaire Corporation, manufacturers of the refrigeration equipment with which milk coolers are equipped.
