

## AUTO GLUBS WANT GOOD ROADS

Laurens, S. C., Feb. 26 (Special)—At the first formal meeting Saturday night of the good roads association recently formed here a communication was received from representative citizens of Clinton asking that Laurens co-operate with them in working for a permanent highway between Laurens and Clinton, the permanent work on this road to be augmented as time passes so that all the main roads of the county would be materially improved. The communication from Clinton was favorably received by the members of the association and immediately a get-together meeting was arranged to be held last night. The advertiser had already gone to press when this meeting adjourned, but early remarks of the meeting showed a

unanimous sentiment in favor of beginning a permanent system of roads immediately. Mr. J. F. Jacobs was to have been the chief spokesman for the Clinton delegation. He was not able to attend the meeting, but sent an outline of his intended speech. He did not dwell extensively on the benefits of good roads in general, stating that the advantage of good roads were already generally agreed upon. He dwelt more particularly upon the road question in Laurens county, saying that the time had come when the county should take an advanced step along this line. To secure permanent roads, he said, a beginning must be had somewhere and he said this should be on the road carrying the most traffic and that other roads should be built according to the traffic they bear. The road between Laurens and Clinton, he said, was one of the most traveled roads in the state and should be improved first in this county. Clinton, he said, was particularly interested in

this road because its citizens wished to be in closer touch with the county seat and desired and were willing to help pay for a good road which could be traveled at all times. He pointed out that the national government would allow a yearly appropriation of about \$20,000 for permanent roads in this county, but the appropriation would not be available unless the roads were of permanent construction and for this reason he advocated a beginning if it was only a beginning, on permanent roads and that the system of permanent roads be added to yearly so long as the government allowed this appropriation. Mr. E. H. Wilkes is president of the Laurens association and Mr. R. A. Babb is secretary. The association is now constituted has about fifty members, but it is hoped to greatly increase this number in the near future. The association's membership is not limited to the city of Laurens, but anyone in the county is eligible and invited to join.

## RUPTURE EXPERT HERE

Seely, Famous in this Specialty, called to Greenwood  
F. H. Seely of Chicago and Philadelphia, the noted truss expert, will personally be at the Oregon Hotel and will remain in Greenwood Wednesday only, March 5th. Mr. Seely says: "The Spermatic Shield will not only retain any case of rupture perfectly, but contracts the opening in 10 days on the average case. This instrument received the only award in England and in Spain producing results without surgery, injections, medical treatment or prescriptions. Mr. Seely has documents from the United States Government, Washington, D. C., for inspection. All charity cases without charge, or if any interested call, he will be glad to show same without charge or fit them if desired. Business demands prevent stopping at any other place in this section. P. S.—Every statement in this notice has been verified before the Federal and State Courts.—F. H. Seely.

## SPRAYING AWAY THE BUGS.

### Control Measures For Orchard And Garden.

Clemson College.—Within the next month the orchard trees will probably be in the proper stage for the spring sprayings to control worms. Arsenate of Lead should be purchased as soon as possible and should not be put off until the day the spraying should be done. Everyone who expects to have fruit without worms this summer should consider the purchasing of spray materials for the spring and summer sprayings as an obligation not to be neglected. The first spraying of peaches for worms should be done when the petals have fallen and most of the shucks slipped, which is about ten days after full bloom. The spraying of apples should be immediately after all petals have fallen and before the calyx closes.

In a mixed orchard where there are various types and ages of apple trees, two sprayings will be necessary, as all the trees will not be blooming at the same time. Spray part of the trees when enough of the petals have fallen, and the rest within a week or ten days.

**What is Needed for Spring Sprayings.**  
For each fifty-gallon barrel of spray solution, one pound of arsenate of lead powder or two pounds of arsenate of lead paste and two pounds of unslaked lime. In estimating the materials needed, the following schedule of amount of spray required on trees should be used:

- 60 very young peach or apple trees per barrel.
- 35 peach trees in full bearing per barrel.
- 35 apple trees in full bearing per barrel.
- 20 large old-fashioned apple trees per barrel.

Write for Circular Number 25 for directions for the spring and summer sprayings.

**Apple Lice:** Apple trees when the leaves begin to grow are very frequently attacked by lice or aphids. The young leaves curl and the tree's growth is checked by the lice sucking the plant juices. The fruit yield is reduced and the fruit will be deformed and poorly developed.—and this also assists in spreading diseases. For Control: Begin just as soon as the lice are noticed on the tender young leaves and when the leaves begin to curl and turn yellow. Spray with nicotine sulfate (also known as Black Leaf 40), diluted at the rate of about 1 teaspoonful to 1 gallon of water, or about 1/2 coffee-cup full to 50 gallons of water. The nicotine can be mixed with the arsenate of lead spray and be put on at the same time. Write for bulletins on the Apple Lice.

**Garden Insects for March and April.**  
Among the spring garden insects which usually require attention during March and April are the potato beetle or bug, the cabbage worm, and the cabbage lice. Very little trouble should be experienced in controlling these pests. The main point in the control is to watch the plants closely, and on the first appearance of these pests, start controlling them.

**To Control the Potato Bug or Beetle:**—The most convenient and efficient method is to dust the plants with arsenate of lead powder or calarsenate. Of course the plants can be sprayed with a solution of these poisons with the same results. But the dusting method is cheaper and more easily done. Mix the poison thoroughly with air-slaked lime in the proportion of about half and half. A small flour sack or a muslin or cheese-cloth bag can be used to advantage to shake the poison on the plants. Do this in early morning when the dew is on the plants for best results. Do not let the bag become wet by touching the wet plants.

**To Control the Cabbage Worm:**—Use the same control measures for the cabbage worm as for the potato beetle. The prejudice that some have against poisoning cabbage is an unfounded one. Experiments show that a person would have to eat 28 cabbages at one time, if dusted in the ordinary way, to receive any poisoning effects. Begin to dust the cabbage with either of the two poisons mentioned for the control of the potato bug, when the worm holes are first noticed, and continue this as long as necessary.

**Cabbage Lice:**—A small grayish, or greenish louse, which causes the plant to wilt and die by sucking.

The cabbage louse gives birth to living young throughout the summer months, by the millions. During the fall there is a generation of female lice which lay eggs. The winter is passed in the egg stage.

**Control:** 1. Spray with nicotine sulfate or Black Leaf 40—1 pint to 100 gallons water, or 1 tablespoon to 6 gallons water.

2. Spray with soap solution: 1 lb. of ordinary laundry soap in 2 gallons of hot water. Shave the soap in thin pieces before heating. Dilute the 2 gallons of hot mixture to 4 gallons by adding 2 gallons of cold water.

If Black Leaf 40 cannot be obtained from local dealers, the nearest market is The Kentucky Tobacco Products Co., Louisville, Ky. Price of material, \$1.25 per 1 pint.

Fall plowing or spading in the garden will kill many insects and bugs that would otherwise pester you next season.

## MILITARY UNIT AT THE COLLEGE

Dr. D. M. Douglas, president of the college, has received notice from the War Department that his application to establish a Reserved Officers' Training Corps in the Presbyterian College of South Carolina, has been favorably acted upon, and that the unit will be established at once.

Maj. Frederick J. Derohan has been detailed by the War Department as Professor of Military Science and Tactics. Dr. Douglas was in Washington a short while ago and impressed upon the officer in charge, that the college is under the control of the Church, and asked that an officer be sent who would be in sympathy with the work and try to co-operate with the president in carrying out the aims of the institution. Maj. Derohan was recommended as a young man of remarkable military ability, attractive personality and high moral character.

The college was unusually fortunate in the officer sent by the government to take charge of the S. A. T. C. Lieutenant MacFarland is a young man of high Christian character and marked military ability. He easily won the confidence of the faculty and the respect of the students. The college would have been delighted to retain him as the officer in charge of the R. O. T. C., but since the war is over, Lieutenant MacFarland prefers returning to his home in Ohio to continue his business.

### Dr. Reavis Here Sunday

Dr. J. O. Reavis of Columbia Seminary, will preach at the First Presbyterian Church next Sunday morning and at the Thornwell Memorial in the afternoon at four o'clock.

Maj. B. A. Tolbert of the Department of Education, Washington, D. C., has been visiting in the city as the guest of his sister, Mrs. A. J. Milling.

The following people were here for Mrs. Hillian Blakely's funeral: Mr. Walter Blakely of Aiken; Mrs. Campbell of Sumter, Rev. and Mrs. Sam Bass of Roubuck, Mrs. Emma Blakeley of Spartanburg.

# Homes are needed in Clinton Today more than ever before.

## Own your own Home--Stop Paying Rent.

# Series "J" of Citizens Building & Loan Association is now open to prospective investors and home-seekers.

## We now offer to subscribers One Thousand Shares with maturity value of \$100,000.

All Stock payable \$1.00 per month for each share and as soon as the value of a share is \$100.00, the amount is returned in cash to the stockholders.

Any stockholder desiring a loan can borrow \$100 for each share owned, the said loan to be secured by real estate.

Series "I" is about matured and \$29,600 will be paid to the stockholders by March 15, 1919, which will make a total of \$95,400.00 paid to our stockholders.

## Subscribe for a block of stock now. Help Clinton Grow Greater.

Send in your subscription to,

## Life Was a Misery

Mrs. F. M. Jones, of Palmer, Okla., writes: "From the time I entered into womanhood . . . I looked with dread from one month to the next. I suffered with my back and bearing-down pain, until life to me was a misery. I would think I could not endure the pain any longer, and I gradually got worse. . . Nothing seemed to help me until, one day, . . . I decided to

TAKE

# CARDUI

The Woman's Tonic

"I took four bottles,"

Mrs. Jones goes on to say, "and was not only greatly relieved, but can truthfully say that I have not a pain. . . ."

"It has now been two years since I took Cardui, and I am still in good health. . . . I would advise any woman or girl to use Cardui who is a sufferer from any female trouble."

If you suffer pain caused from womanly trouble, or if you feel the need of a good strengthening tonic to build up your run-down system, take the advice of Mrs. Jones. Try Cardui. It helped her. We believe it will help you.
