EFFECTUALLY TO PREVENT CROWS AND OTHER BIRDS FROM PULLING UP YOUNG CORN.

The following remedy we believe once before appeared in our columns, but knowing its value we repeat it.

Put your corn in warm water and let it stand at least 12 hours; then pour off the water and add more, of blood heat or a little warmer; pour in tar, at the rate of one pint to the bush of corn. Stir well to make the tar mix fully with the water and corn, then pour off the water and mix in dry sand to prevent the grains from adhering...

Cotton and Silk Culture.—According to the estimate of Mr. Chauncey Stone of Burlington, N. J. based upon his own experience (See his letter in this paper of March 13) the number of worms necessary to make 100 lb. of reeled silk require to be attended during the first week by one hand; during the second week, by one hand and a boy or girl; and afterwards by only one additional hand...

Mr. Stone's estimate is correct, and we shall soon see that it is not too high; the culture of silk is manifestly much preferable to that of cotton, even supposing that only one set, or generation of worms could be reared in a season...

Estimate. Expenses of every kind.

Table with 3 columns: Item description, Quantity, and Price/Value. Includes 225 standard mulberry trees at 1.25, 450 dwarf-trees on the borders at 80, etc.

Not an inconsiderable part of the plantations which are embraced in this estimate, are of trees three, four, and five years old; and one-third of the trees, at least, have not been stripped this year, particularly a young copse of 15000 dwarf-mulberry trees, grafted not long since...

The hectare is not quite 2 1/2 English or American acres—therefore the whole price of land was about 7 1/2 acres, and the part in mulberry trees, 1 1/2 acres.—Ed. F. R.

It should be borne in mind, that it is of the white mulberry that Mr. Carrier speaks; nor leaves of which are not plucked for feeding, nor cannot be, with safety to the trees, until after the trees are five years old.—Ed. F. R.
