do of Fre The engineer for the Seine and Mathe departments in France reports that trials of a mixture of oil and loum as a dust preventive have ees unsuccessful. In the summer of 1902 a coating of tar was tried on seven different lengths of road. Afte careful investigation during a period of twelve months, it was found that dust and mud had wholly disappear ed and the cost of maintenance had been reduced. The tar forms an elas tic skin, which deadens the sound of traffic and reduces the resistance. It appears that the tarring method incives no greater outlay than that for coating with oil.

Long Confined as Lever.

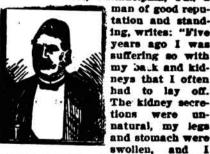

A remarkable story which has lately attracted great sympathy in Cape Colony, is that of a man named Aproskie, who, after having been confined on Robben Island for eight years as a person suspected of having leprosy. was recently allowed to return to his family as non-afflicted. He was for merly a shipwrecked sailor who took a farm at the Cape, married and prospered exceedingly. Mosquito bites were mistaken for leprosy by a fieldcornet, who sent him to Robben Island. He returned home broken in spirit and financially ruined, his property having been sold for the upkeep of his children.

Cat Nurses Squirrels. A Joplin (Mo.) dispatch to the Chicago Inter-Ocean states:

William Williams, a farmer living south of Avilla, near this city, has a cat that nurses a litter of squirrels. Four young fox squirrels were taken to the house recently from the nest where they were found, although the family cat had a litter of kittens, she exhibits motherly fondness for the squirrels, and makes regular trips back and forth from the house to the barn, and licks and nurses the squirdels as tenderly as she does her kit-

Bugs Pressed Into Cakes. That questionable epicurean tidbit; the snail, has a rival in Merico in a species of bugs known popularly as "water boatmen." These aquatic insects are gathered in large numbers on the large lakes near the city of Mexico, and when dried are much prized as an article of diet by the natives. The immense numbers in which they are found on these lakes is indicated by the fact that they are

THE TALE OF POLLY WOGG. Oh, a pollywog lived in a little glass tank, With a goldlish or two and a snail; And his body was fat and covered with of the bottle.

spots, But he sported a monstrous long tail. He wriggled and twisted the livelong day, And grew, this fat pollywog; But never once did it enter his head That he was akin to a frog.

Along in his sides, down next to his tail, He had a bad feeling one day, And before the next morning two legs had appeared, To help him along on his way.

With his gills disappearing, he couldn't breathe well, And two more funny legs came to light; He stretched them all out and wiggled his And tried to make believe 'twas all right.

Four legs and a tail for one pollywog

Seemed so funny he wanted to laugh; And then one night he happened to see That his tail was shorter by half. And it faded away-a little each day-Till hardly a bit could he see; Then it all disappeared, and pollywog

A gay little froggy was he!

Then somebody put him in a little tin pail And carried him down to the brook; And all that I've told you you may see for yourself If you'll just take the trouble to look. . --Clara E. Atwood, in Youth's Companion.

A ROBIN'S NEST.

Here on the farm, nests, birds and eggs are very plentiful. You may hear the birds' sweet little voices about all whole. day long, especially after a thunder First, bend the head forward until

shower, when they seem glad to hop the chin rests on the breast; then balall about, singing and chirping away One cannot help but enjoy it as they

go about their work or play. Birds easier than it looks.

COUNTRY LIFE: Why Newspanies of Small Towns Are S. Looplet

A British visitor to this country not long since was quoted as saying that he estimated the character and quality of the people largely by the newspapers. A fairly accurate estimate may be made in this way, no doubt, but could not come from inspection of the papers which in all probability fell into the hands of this Englishman. He would naturally see the prominent metropolitan papers, and at furthest only the leading ones of the smaller cities. From the character of these he could draw certain correct inferences as to the people for whom they were printed. He would know, first, and most distinctly, that these people were full of enterprise and energy, and were ready for any commercial undertaking. however vast; he would learn that they were generous in a large way, somewhat boastful, rather careless, individually, of their public obligations, but on the whole having rather a high standard by which to measure public men. These and numerous other conclusions he could draw from the papers that would in all likelihood fall into his hands, but unless he made a study of the country press he would miss a view of these same people quite necessary to a proper understanding and estimate of them.

The metropolitan papers deal with affairs of general interest-foreign and national events, politics, matters relating to public men, news that concerns many classes of readers, etc.; the papers of small towns and villages deal with matters of another sort; they are in close touch with their readers and treat of local and personal affairs. Politics and outside news may have place in their columns, too, but merely in an incidental way. It is the local record that gives them interest and character and makes them valuable and delightful.

In a community where everybody knows everybody else there is a natural and perfectly proper interest in knowing that Uncle Jake Snyder is having his barn painted, that Sam Sweeney is having troub'e with his eyes, that Farmer Johnson has raised the biggest tomatoes ever seen in the region, that John Jones visited his "best girl" on Sunday night, and so on, and so on, and so on. It is not love of trivial detail or petty gossip, but an outgrowth of neighborly and kindly feelings that calls for a recital of these things. To an outsider the personal comments may at times seem overly familiar, but with the free give-andtake of a small community they are not so considered by the persons concerned, but are regarded rather as family pleasantries. It is through these papers, indeed, that glimpses are to be had of the best family life of the country, the dinners, the picnics, the reunions, the gayeties, as well as the more serious phases. The relations of the people to each other are discernible. One who reads between the lines of these records of local happenings and doings can see the simplicity, the open-hearted hospitality, the kindliness of the men and women who are mentioned from time to time; their pursuits, their ambitions, and, alas, also, their sorrows are made clear.

Many a man long resident of a city takes regularly the little paper published in his old home and reads it eagerly, thus keeping in touch with his former associates; but even the stranger of sympathetic mind and a degree of insight finds a charm in such papers that more pretentious sheets the deer, he traveled on that. He saw cannot possess. They bring him into but very few dead deer-five to seven close relations with the people who, being the largest number in a long dis-

The percolation of a liquid through a porous solid is much affected by the temperature. It has been found that the internal friction is reduced as the temperature rises.

In India the power given off by a motor is sometimes expressed in elcphant equivalents, a twenty-two-horse motor, says Motoring Illustrated, being described as a three-elephant vehicle.

A German chemist removes the nicotine from tobacco by steeping the leaves in a solution of tannic acid. The tobacco is then treated with a decoction of marjoram to improve its flavor.

An international exhibition of small motors and also of machine tools for various industries was held at Ghent. with the object of showing how means of production may be improved with the aid of motive power, especially electricity.

Two new ideas in street-car construction detail originating in Philadelphia are substitutes for the grab handles on the side posts of open cars, consisting of brackets which inclose the space between the back of the seats and the posts, and an entrance guard which slides upon the inside of the posts, and which when not in use is held under the curtain guards by gravity catches.

The new British torpedo boat destroyer Waveney belongs to the new class of torpedo boat destroyers, and has been built with a displacement of 550 tons and equipped with one 12pounder and five 6-pounder quick-tiring guns and two 18-inch torpedo tubes. The Waveney has been fitted with engines of 7000 horse-power, supplied with steam from modified Yarrow water-tube boilers, propelling her at a speed of 251/2 knots an hour.

THE ADIRONDACK ELK.

Bellef That the Deer is Fast Becoming Extinct Not True. Deer signs are about as numerous a usual. The talk about the deer stary ing in great numbers last winter is certainly not true in this section. Today I had a talk with our courteous and efficient game protector for Hamil ton County, Mr. Robert O. Nichols, of

Indian Lake, and he told me that he traveled his territory last winter on snowshoes a great deal, and later, when the snow crust would bear up

How It Gat He Name.

Back in Clinton County, in a seetion which is rapidly becoming known through the development of its oil wells, is a village called Seventy-siz. In the midst of the village is a waterfall, which greeted the eye of the first frontiersman who went to that part of this State when it was still a part of Virginia. He measured the depth of the fall and found it to be seventy-six feet. The accuracy of the measurement has never been called into question, and the inhabitants of the town to this day have their mails addressed to "Seventy-siz, Ky." The fall is of little volume during the summer months, but it is of great beauty at all times. In the winter it is a roaring cataract, and Indian Creek frequently goes upon a rampage. The section was a favorite hunting ground of the Indians in the early days, and the creek derived its name from the number of spearheads and spikes which are found in the fields around .- Louisville (Ky.) Courter-Journal.

Mall Carried by Re'ndeer Team. The capacity of the reindeer for team work is remarkable. His hoofs are very broad and do not penetrate the snow crusts. His average weight is about 400 pounds. He will swiftly draw a sled carrying 600 pounds, and with this load can cover thirty, fifty and even ninety miles a day. Tho reindeer teams now carry the mails from Kotzebue to Point Barrow, a distance of 650 miles-the most northorly post route in the world. No food is carried for the deer. At the end of his journey, or at any stopping place, he is turned loose, and at once breaks through the snow to the white moss, which serves as food. It costs nothing to feed him As the white cettlements increase in the mineral bearing parts of Alaska, and in many places remote from railway and steamboat transportation, the rein-

The letter of Miss Merkley, whose picture is printed above, proves beyond question that thousands of cases of inflammation of the ovaries and womb are annually cured by the use of Lydia E. Pinkham's Vegetable Compound.

" DEAR MRS. PINEBAM : -- Gradual loss of strength and nerve force told me something was radically wrong with me. I had severe shooting pains through the polvic organs, cramps and extreme irritation compelled me to eek medical advice. The doctor said that I had ovarian trouble and ulceration, and advised an operation. strongly objected to this and decided to try Lydia E. Pinkham's Vegetable Compound. I soon found that my judgment was correct, and that all good things said about this medicine were true, and day by day I felt less pain and increased appetite. The ulceration soon healed, and the other complications disappeared, and in eleven weeks I was once more strong and vigorous and perfectly well.

" My heartlest thanks are sent to you for the great good you have done - Sincerely yours, Miss MARGARET MERKLEY, 275 Third St., Milwaukee, Wis. - \$5000 forfeit if original of above letter are so tame here that a pair of robins Bend the knees gently, coming to the have gone to work and boldly built foor on one knee. The High-Falutin' Style.

The high-falutin' style may be fashlouable, says London Truth, but it is few years ago, when their value was not always informing. Miss Eva Powall, lecturing before a ladies' class upon vocalism, declared: "If you really want to sing, just open your mouth and let the radi, ting sluging sout writproduce a 370 pound sturgeon as it 'n you hurl itself forth," adding: "If does to produce a six foot saw log, and | you sing of a dewdrop you must see the time is approaching when the big mentally the glistenia; beads of the meadow; if of a skylark, imagine yourself a bird." At this point an inquiring damsel caused the lecture to collapse by innocently asking about the "Honeysuckle and the Bee." Was she to imagine herself a flower or an in-Sect?

"The Wolf's" Philosophy.

"Temptation is temptation, whether the man yield or overcome. Fire is fanned by the wind until it leaps up flercely. Sop is desire like fire. It is fanned, as by a wind, by sight of the thing desired, or by a new and luring description or comprehension of the thing desired. There lies the templation. It is the wind that fans the desire until it leaps up to mastery. That's temptation. It may not fan sufficiently to make the desire overmastering. but in so far as it fans at all, that far is it temptation. And, as you say, it may tempt for good as well as for

wintered well as a rule. However, he said he could not speak from personal knowledge of the Moose River region. nor of the country around Long Lake west. From both these sections came reports of many deer dead from starvation. If these be true, they merely indicate a greater abundance of deer in those parts. The elk seem to be thriving hereabouts. Recently a band of seven were seen in a cow pasture, feeding among

the cattle. Some of the residents have a mistaken notion that the elk are driving out the deer. This cannot be, for the elk are too newly introduced and are as yet too few in numbers to drive out the deer, either by fighting or consuming their food. But another cause has undoubtedly operated against the deer. This place is practically surrounded by lumber camps, nest of which are now in operation their third season. Leaving out of account whatever deer arc cate : in these camps, the tendency is for the deer to retire to less disturbed portions of the forest, while the elk, introduced from semi-domesticated herds on private preserves, are less shy of man. This, I think, explains for this section the less than usual observance of deer where that condition exists.

Present indications are that the seaon will be lighter than usual for the hotels, but the region maintains its unsurpassed loveliness. - Correspondcace in Forest and Stream.

If Our Eyes Were in Tune.

Suppose that our eyes were attuied to the vibrations revealed to us by the polemetre. Instead of seeing the stars that we now see we should perceive those whose light has long been exlinguished, whose existence the metho is of modern physics have enabled us to prove. The sun would appear surrounded by its corona, changing in form and position every instant, and we should no longer be obliged to wait or total celipses to study this phenomnon. Currents of hot air would beone visible like snow squalls and the selence of heat would have no more secreis.

New Crease to the Trousers.

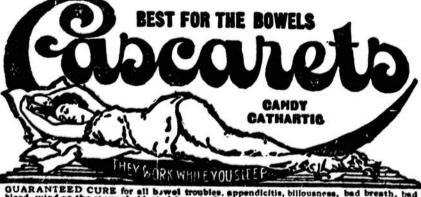

A feature of siyle said to have been incroduced by the King is to have the creases in the trousers at the side and leg seam instead of back and front. Already a few West End dandies have adopted this plan, but as the effect of this innovation is to prdouce a thicker appearance to the leg, we do ot anticipate any general adoption of his fashion.-Tailor and Cutter.

To Play Without Scenery.

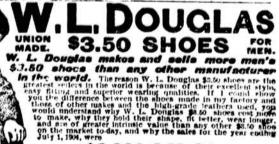

There is a society in England which as as one of its chief objects to strip se modern stage of its elaborate scenry and to return to the day: when the Diay was the thing, and not its setting.
