Rorn.—The following article has remarkable illustrations of the value of careful marshalling and analysis of facts in presenting a subsect to the public.

LEVELERS. The Mission of Whicky, Tob

The Creator made all things, we be-If so, He must have made these We know what He made food and water for, and air and sunshine, but why Whisky, Tobacco and Coffee? .

They are here sure enough and each performing its work. There must be some great plan behind it all; the thoughtful man seeks to understand something of that plan

and thereby to judge these articles for their true worth.

Let us not say "bad" or "good" without taking testimony. There are times and conditions when it certainly seems to the casual observer that these stimulant narcotics are

real blessings. Right there is the ambush that conceals a "killing" cnemy. One can slip into the habit of either

whisky, tobacco or coffee easy enough, but to "untangle" is often a fearful struggle. It seems plain that there are circumstances when the narcotic effect of

these poisons is for the moment beneficial, but the fearful argument against them is that seldom ever does one find a steady user of either whisky, coffee or tobacco free from disease of some kind.

Certainly powerful elements in their effect on the human race.

It is a matter of daily history testifled to by literally millions of people, that Whisky, Tobacco and Coffee are smiling, promising, beguiling friends on the start, but always false as hell stelf in the end. Once they get firm hold enough to show their strength, they insist upon governing and drive the victim steadily towards ill health In some form; if permitted to continue to rule, they will not let up until physical and mental ruin sets in.

A man under that spell (and "under the spell" is correct), of any one of these drugs, frequently assures himself and his friends, "Why, I can leave off any time I want to. I did quit for a week just to show I could." It is a sure mark of the slave when one gets to that stage. He wiggled through a week fighting every day to break the spell, was finally whipped, and began his slavery all over again.

The slave (Coffee slave as well as Tobacco and Whisky) daily reviews his condition, sees perfectly plain the steady encroachments of disease, how the nerves get weaker day by day and demand the drug that seems to smile and offer relief for a few minutes and then leave the diseased condition plainer to view than ever and growing worse. Many times the Coffee slave realizes that he is between two fires. He feels bad if he leaves off. and a little worse if he drinks and allows the effect to wear off.

So it goes on from day to day. Every night the struggling victim promises himself that he will break the habit and next day when he feels a little bad (as he is quite sure to), breaks, not the habit, but his own resolution. It is nearly always a tough fight, with disaster ahead sure if the habit wins.

There have been hundreds of thousands of people driven to their graves through disease brought on by coffee drinking alone, and it is quite certain that more human misery is caused by ffee and tobacco than by whisky. the two first are more widely used, and more hidden and insidious in the effect on nerves, heart and other vital organs, and are thus unsuspected until much of the dangerous work is

Now, Reader, what is your opinion as to the real use the Creator has for these things? Take a look at the question from this point of view.

There is a law of Nature and of Nature's God that things slowly evolve from lower planes to higher, a sturdy steady and dignified advance toward more perfect things in both the Physical and Spiritual world. The ponderous tread of evolutionary development is fixed by the Infinite and will not be quickened out of natural law by any of man's methods.

Therefore we see many ilustrations showing how nature checks too rapid advance. Illinois raises phenomenal crops of corn for two or three years. If she continued to do so every year her farmers would advance in wealth far beyond those of other sections or countries. So Nature interposes a bar every three or four years and brings on a "bad year."

Here we see the leveling influence at work.

A man is prosperous in his business for a number of years and grows rich. Then Nature sets the "leveling influence" at work on him. Some of his investments lose, he becomes luxurious and lazy. Perhaps it is whisky, tobacco, coffee, women, gambling, or some other form. The intent and purpose is to level him. Keep him from evolving too far shead of the masses-

A nation becomes prosperous and great like ancient Rome. If no leveling influence set in she would dominate the world perhaps for all time. But Dame Nature sets her army of "levelers" at work. Luxury, over eating and drinking, licentiousness, waste and extravagance, indulgences of all kinds, then comes the wreck. Sure, Sure, Sure.

The law of the unit is the law of the mass. Man goes through the same Weakness (in childhood). gradual growth of strength, energy, thrift, probity, prosperity, wealth, comfort, ease, relaxation, self-indulgence, luxury, idleness, waste, debanchery, disease, and the wreck follows. The "levelers" are in the bushes along the pathway of every successful man and woman and they bag the ma-

Only now and then can a man stand out against these "levelers" and hold his fortune, fame and health to the

So the Creator has use for Whisky. Tobacco and Coffee to level down the successful ones and those who show signs of being successful, and keep them back in the race, so that the great "field" (the masses) may not be left

And yet we must admit that same all

wise Creater his placed it in the jour-er of man to stand spright, clathed in the armor of a clean set, steady mind and say tinto himself, "I decline to ex-change my birthright for a mean of

potage. en my grip on affairs and keep myself cheep, common and behind in fortune and fame by drugging with whisky, tobacco or coffee; life is too short. It is hard enough to win the good things, without any sort of handicap, so a man is certainly a "fool trader" when he trades strength, health, money, and the good things that come with power, for the half-asleep condition of the "drugger' with the certainty of sickness and disease ahead."

It is a matter each individual must decide for himself. He can be a leader and semi-god if he will, or he can go along through life a drugged clown, a cheap "hewer of wood or carrier of water.

Certain it is that while the Great Father of us all does not seem to "mind" if some of His children are foolish and stupid. He seems to select others (perhaps those He intends for some special work) and allows them to be threshed and castigated most fear-

fully by these "levelers." If a man tries flirting with these levelers awhile, and gets a few slaps as a hint, he had better take the hint or a good solid blow will follow.

When a man tries to live upright, cleau, thrifty, sober, and undrugged, manifesting as near as he knows what the Creator intends he should, happiness, health and peace seem to come to him. Does it pay?

This article was written to set people thinking, to rouse the "God within," for every highly organized man and woman has times when they feel a something calling from within for them to press 'o the front and "be about the Father's business;" don't mistake it; the spark of the Infinite is there and it pays in every way, health, happiness, peace, and even worldly prosperity, to break off the habits and strip clean for the work cut out for us.

It has been the business of the writer to provide a practical and easy way for people to break away from the coffee habit and be assured of a return to health and all of the good things that brings, provided the abuse bas not gone too far, and even then the cases where the body has been rebuilt on a basis of strength and health run into the thousands.

It is an easy and comfortable step to stop coffee instantly by having wellmade Postum Food Coffee served rich and hot with good cream, for the color and flavor is there, but none of the caffeine or other nerve destroying elements of ordinary coffee.

On the contrary, the most powerful rebuilding elements furnished by Nature are in Postum and they quickly set about repairing the damage. Seldom is it more than two days after the change is made before the old stomach or bowel troubles or complaints of kidneys, heart, head or nerves show unmistakable evidence of getting better and ten days' time changes things wonderfully.

Literally millions of brain working Americans to-day use Postum, having found the value and common sense in

> C. W. POST. THE PERFECT WOMAN.

A Japanese Folk Tale That Gives the Native Ideal.

In a current magazine Madame Calla J. Harrison relates the following e as illustrating th native ideal of perfect womanhood:

Kesa filled the eighteen requirements of a beautiful woman. Moreover, she was peerless in character as well. . Before her and her loverhusband, Wataru, life seemingly had stretched a long, happy road. Unfortunately, they fell in debt to Morito, a neighboring samural, whose evil eye fell upon Kesa, and he coveted her with all his soul. He wished Kesa for his wife, but while Wataru lived this could not be with honor. But an enemy's life was but a small hindrance—one stroke of the keen samural sword and Kesa could be free. So, Morito reasoned and pressed this plan upon Kesa's old mother, who in turn pleaded with her daughter, till Kesa found herself between two fires, filial versus conjugal love

and duty. At last, after bitter weeping, she consented and plans were laid. On a certain night Wataru would return from a journey and after his bath would lie down on his own pallet among the sleeping ones in the family hall. Morito could easily find him, for his hair would be wet from the bath.

On the appointed night Morito crept through the hall, lit only by the andon's dim light. He found Waturu's place; his hair was wet and his face muffled in the covering. Hastily he spread down a napkin by the pillow, then with one sharp, swift stroke of his sword severed the sleeper's head. Gathering it up in the napkin, he fied. There was no pursuit, and when he had gained his own room in safety he sat down to gloat over his prize. As he turned the head to get a good view the sight froze him with horror, for it was the sweet, piteous face of Kesa. She had sent her husband from harm, cut off her hair and prepared it to imitate his and meekly lay down to die that she might be true to both ties-dying, she fulfilled her duties as a filial daughter, and a faithful wife. In those stern and cruel times, many women had done excellently, but Kesa outshone them

amount of dry roughness.

L. J. C., Gainesville, Fla.-Please give me the relative value of corn and cotton seed meal for fattening cattle. and also that of cotton seed and cotton seed meal.

In experiments made on the Tennessee station farm for several years past a fation consisting of two-thirds of cotton seed meal and one-third of corn meal has been fed with great success to beef cattle after the following method:

In the early stages of fattening beef eattle it is desirable to obtain as much growth as possible, therefore the grain ration consisted largely of cotton seed meal, a food stuff rich in protein, or muscle building elements, tending to a satisfactory reason for this peculiarproduce rapid growth. As the feeding period advances the amount of cotton seed meal fed was gradually reduced, and at the end of three months the cattle were receiving two-thirds of corn meal and one-third of cotton seed meal. This ration was continued for the next sixty days and the cattle made uniform gains throughout the period

of five months. The cattle receiving this meal ration made about 2.4 pounds gain per day for the whole period, which is a very satisfactory gain. When cotton seed meal alone was fed the cattle only made a gain of 2.15 pounds per head per day. It is evident, therefore, that the addition of corn to the ration in the finishing period was a great advantage. Cotton seed meal fed by itself to beef cattle does not make as satisfactory a ration as when combined with a small amount of corn, for the reason that it is too one-sided a food, and therefore the cattle do not fatten as rapidly as is desirable. Of course, when cotton seed meal is cheap, say \$20 a ton, and corn fifty to sixty cents a bushel, it is better policy to feed a larger amount of cotton seed meal, even though some waste results, than to purchase high-

Cotton seed meal cannot be fed with satisfaction to beef cattle for long periods where large amounts are usedsay as much as eight to twelve pounds per head per day-unless it is combined with silage or roots or some other succulent food.

priced corn to go with it.

If hulls are fed to cattle, the meal and hulls should be mixed in the proportion of about one to five, and the cattle should not receive more than six to eight pounds of cotton seed meal when on full feed. Where succulent roughness is used, from eight to twelve pounds can be fed with safety.

A ration containing cotton seed meal as the only concentrate should be increased very gradually, or else the digestive system of the cattle is likely to be deranged and they will be thrown off feed

Cotton seed does not make a very sat isfactory ration for beef cattle; it contains too much oil, and therefore is too laxative. If you can buy the cotton seed at from \$8 to \$10 a ton you can probably afford to feed them to beef cattle even with the disadvantage mentioned, provided some other form of dry roughness is used. If you can obtain as much as \$15 a ton for cotton seed and buy cotton seed meal for \$20 to \$25, it is better to sell the seed to the oil mills and buy the meal.

When corn can be purchased for forty cents a bushel it will be profitable to feed a considerable quantity of it with cotton seed meal. It is impossible to give directions for some time in advance, because the crop season influences the prices of various concentrates, and one in order to be successful in feeding beef cattle must study local conditions very carefully and utilize the food stuff that is cheapest and best suited to his purpose .-- Professor

Silage as a Companion Food One of the best ways to feed alfalfa hay is with silage, unless in a region to put the sorghum down ev ry four where alfalfa is very cheap, a contingency that is not likely to arise in the Southeastern States, because the crop will hardly grow with the luxuriance characteristic of it in the West. Alfalfa bay in the Southeastern as the sorghum and not later, as the States, by reason of its higher price, is a foodstuff that must be utilized more shadow the cowpeas and prevent their carefully than in the West, where it can be fed in the most wasteful fash- have never been able to get a large ion and still give profitable returns. It is a great advantage to feed alfalfa or sorghum for silage purposes. Fifteen any other of the leguminous crops that per cent. is the largest amount ever may be substituted for a portion of obtained and the average has been bethe concentrates in a ration of the dairy cow with some such succulent corn and sorghum thinner and in widand palatable food as silage. By chopping the alfalfa up, as practiced in our experiments, and sprinkling it over the sliage with the meal the small amount of peas obtained unfed, the whole ration was readily consumed. If the alfalfa hay was fed by itself, even in larger quantity, it would not be so completely consumed, and the waste would be much greater and its effectiveness in the ration reduced to that extent. In our judgment the gratifying results following the substitution of alfalfa and cowpea purposes.

Sharps and Flats.

An Austrian genius has made the discovery that celluloid, prepared in a ers can be made. These hats are not only beautiful in themselves and can not be told from those made of the usual material, but will stand the most evere shower and look even better after than before. They are used to some extent in Germany, especially in Vienna.

The labors of the Irish 'Anti-Emigration Society, an organization formed last year, do not appear to have been attended with much success. The emigration from the south and west of Ireland, from which the outflow chiefly takes place, has shown no sign of diminishing.
