SHERLOCK HOLMES, JR. **COMING TO ANDERSON**

He Will Be Guest of The Intelligencer **Writing Daily Stories**

\$25.00 Reward Offered

Anyone Identifying Him Will Receive Reward for Catching the Sleuth

Look out for the Man of Mystery!

Look out for the Man of Mystery!

The cunning, ingenious Mr. Holmes, the dare-devil gentleman who has created a furore of interest over half of the United States, and who has had more imitators than perhaps any other human being, will shortly make his appearance in Anderson, and it is a safe prediction that his visit will cause no end of fun and excitement.

Manager Talks.

A gentleman now in the city arranging for the appearance of Mr. Holmes, says: "I do not want the public to get Sherlock Holmes, Jr., the Man of Mystery, confused with any of his numerous imitators. Mr. Holmes has received many flattering offers from publishers and others too numerous to mention, to all of whom he has turned a deaf car, preferring his present occupation to anything else, or, as he aptly says: "He is best pleased who pleases himself—and that's me."

"All in all, Mr. Holmes is a wonderfully interecting personality and for the next two cr three days I will have something each day to tell you about Sherlock Holmes, Jr., through the columns of this paper; what he is geing to do in Anderson and best of all, how the first man, woman or child who makes known his identity will receive \$25 cash from the Intelligence for their trouble."

EXPERT GIVES ADVICE TO ANDERSON FARMERS

CATERPILLAR

YESTERDAY HERE

the Planters Here

made by J. W. Rothrock, farm demonstrator for Anderson county, the assistant entomologist from Clemson College came to Anderson yesterday and spent he day here, inspecting a number of the farms in the county where the cotton caterpillar has been found. Prof. W. A. Thomas, who is assistant to Prof. A. F. Conradi, was sent to Anderson and fie gave the farmers many valuable suggestions as to low to stamp out the caterpillar.

farmers many valuable suggestions as to how to stamp out the caterpilar.

Accompanied by Mr. Rothrock, Prof. Thomas visited a number of farms yesterday, among these being the plantations of Bert McCulley, J. J. Martin, John T. Bolt and Fred F. Martin. On his visit to the first two farms named, Prof. Thomas found but few of the caterpillars but at the leaf

J. Martin, John T. Bolt and Fred F. Martin. On his visit to the first two farms named, Prof. Thomas found but few of the caterpillars but at the last two he found that the situation was serious.

Mr. Rothrock said that from what he can see, the caterpillars are sticking to the rain belt or that section of the county where rain has fallen the most during the last few weeks. So far as he knows the caterpillars have not touched the sections where it has been hot and dry.

So interested are the people of Anderson in this question that yesterday dozens of telephone calls were received in this city from farmers in all sections of the county, wanting to know what the expert from Clemson College had advised in the way of treatment. Prof. Thompson, in any swer to this question, said nat Prof. Conraid devised a splendid system and he gave it to a reporter for The Intelligencer in the shape of questions and answers. The method follows:

1. What is the cotton caterpillar? An insect having four life history stages (a) eggs laid on the food plants; (b) caterpillars resembling corn ear worms, which hatch from these eggs; (c) pupa; when the cat.

this suggests the name

Cotton is the normal food plant and nothing else will be molested if an abundant supply of tender cotton can

be obtained.
4. Is serious damage over large

army worm. In sections where para-sites are very abundant, they should control any outbreak of the cotton army worm.

5. When first seen, what should be

Kill the worms as far as practicable

ton can they be prevented from

spreading?
Yes. You can plow a deep furrow around the field and when the worms pile up in the furrow, drag a log through it. Polson the adjoining margins of the cotton fields. If a road or drive-way separates the infasted from the threatened crop use drag in killing caterpillars when crossing.

What are the poisons?
 Arsenate of lead, paris green and London purple are the best in order

About two pounds. Less for very coung cotton and two and one-half to hree pounds for cotton more than 2

poison in a day?

With the apparatus for poisoning two rows at a time, carried on horse-back (as explained in question No. 16) one man can poison 20 acres per day.

18. Is there any danger of poisoning two rows at least, some "belled bursard" of song and story or, at least, some "belled bursard" was seen last week at Story day.

Mountain, Ga., acording to Walter J. Smith, who lives near there, He also here are the results of the story of the place of the story of the s says he saw the bird on his place, showing no especial signs of age or debility and with appetite unimpaired and that the bell tinkled merrily and

MAKING A MOUNTAIN OUT OF A MOLE HILL.

MOLE HILL.

The alarming stories which had been circulated relative to the alleged injurious ingressionts of coes cola received, their death knell when the U.S. Covernment made its searching investigation of the popular sods fountain drink. At a cost estimated in the neighborhood of 100,000,00 the government brought seather the most distinguished array of medical socientific and legal experts that ever investigated a food product. Professors of chemistry from the big universities, lecturers from the leading medical colleges of America, experts in analytical chemistry and pharmacology, acientists of national and international reputation and Government arrests from the Bureau of Chemistry in that Depagiment of Agriculture, Sebored with the brightest legal minds of America to find something wrong with Coca-Cola. 22. Using the stitch and bag method, how do I know when I am using the right amount?

By weighing pole and sack before and after dusting a known area. Uses good judgment. A small variation is immaterial.

23. When is the best time to dust? In the morning when the dow is on and no heavy wind.

24. May the sacks touch the foliage when dusting?

No. It interferes with the amount passing out of the sack. When the leaves are moist it will clog the sack. 25. How can I regulate the amount of jarring of the pole.

By judiciously varying the amount of jarring of the pole.

25. Is it important that the poison be dusted uniformly?

Yes, it s very important.

26. Is it important that the poison for its important that the poison duster distribution in the court found that Coca-Cola.

27. Is it necessary to repeat the dusting immediately after a heavy rain?

It is rarely necessary with araginate of lend, but Paris green and London purple wash off easily. These poisons must be dusted after rain.

28. When an army worm or cate; pillar is not irreatening the croil.
