Your crop will be fargely made or marred in the month June. If you get is started off growing nicely in these a could preparation you sland a very much better chance good crop and your ctop will stand adverse couldinous on and average and August.

If a pig gets stunted in its early youth, it is almost make a good sousing hog out of it later. If your cetton if it gets sore shin or any of the other aliments to which

ble, it has to recover from this before it can take on its na ble, it has to recover from this before it can take on its hand and it never does as well as it would if it had not suffere ples. Side dressing, by supplying plant food, makes this ous and healthy and strong and it grows off from the break your arm and set it, and get i properly set and pro together, it is never as strong as before it was broken a broken wing never soars so high again."

And so it is with your cotton. Early attention and e tion is more than half of the battle. There is no que dressing paying. You notice what top dressing did for spring; as soon as the top dressing was administered, the out of the kinks, and if you administer side dressing to so will come out of the kinks. The preparation for a crunusually fine this spring, and where the preparation is fi

ing is good and side dressing is bound to pay. Some farmers have found side dressing unprofitable; the it was applied too tate; it should be applied early, as soon it was applied too tate; it should be applied early, as soon a your colton to a stand, because you do not care to suit of that you are going to car out; and as soon as you get the a your colton, because you do not care to suit, these grass; care of itself in a crop if let alone. As soonly this is done side dressing should be applied and you are not going to much of it. Up to a few years ago France user, men fer the whole United States of America and they did not use it either. The French farmers, make very time crops. In a few years people will wonder why we use so lift now in making crops. Joel Key fold the writer of a Mr. Ro in Florence County who side dressed his cotton every in vated it, and whon he wound up cultivating his crop.

about 1800 pounds of fertilizer to the acress and when he gathering his crop, he had gathered 680 pounds of that con-acres not seed cotton—lint cotton, two pates weighing st each to the acre. Now, if this is not profitable, the most better quit farming. Side dressing your cotton prevents disease to which cotton because it is stronger and better able to withistand these from is stronger because it is better fed. As well fed pig or a well can resist disease better than a little stusted child or pig. Then, when a main's cotton crop grows off well, when its and greasy and growing, it makes him feel better, it encours the work if better and he will have mode corp better, it encours

teels his onts a little more with a good crop than he does on it gives him better credit and it gives him better stan his community having a good crop of green, greasy ing cotton, than having a little yellow, rusty, hamble bee cotton. The time is past when a man han his respectability and grow jumple has cotton.

complain that they cannot get their hands to slife dress cite Ar: Rogens had no trouble of that sort. He is like the spoken of in the Good Book; when he tells man to do THE REAL PROPERTY AND A RE

If you apply all your fectilizer when you plant you spring rains get a part of its the grazs gets a part; the colline cut out in reducing your crop to a stand has taken a part, and hig crop gets probably not more than half of what you p Now, suppose you use 400 poinds to the acre of 102-You will have 128 ounces of annonia; half of this has been by the rains, the grass and colton you have taken out, so y have about 04 bunces of amnonia and you have 14.75b col-to fertilize with this 64 onnees of amnonia. The wonder little fertilizer will make such a difference in the crop. The this difference by comparing a field fertilized, with a field that is not fertilized. Won will come to, he conclusion they men are giving, you good goods or to little would not und interacted. differences

differences As your cetton grown, your tertilises is absorbed and use along in daily and August your cotton is putting on its fer when this is going on the strain on the cottor plant is greatest pist at the tope when the strain is greatest, the supply of plant which is already reduced, is weakening, so just as the strain ing by the additional front that the stoke takes on, just at the by your might say for vittles, as the bar, plant it after the wate the supply is reduced and is decreasing and your crop these class the food and then they do not hold their ower; sup-did not increase their food when you increased their work; you expect them to shed too?

ou expect them to shed too?

In every contest for corn or cotton that has been years past, the one who got the prize side dressed by than once. There is no accident about this, it is consumer does not stand a ghost of a chance of getting the pri-

contest who does not side dress. In 1911 this county made the biggest cotton crop it has a
