

WHAT IS OUR NATYONAL SIN?
Some Time in the Future This Country Must Appear at the Bar.

Through the prospective of history each nation is but a larger man. It has its bith, its childhood, its manhood and old age, its characteristic virtues, and, alas, its predominating vices and favorite $\sin$. On the old nations, whose records we can view without prejudice or favor, and give judgment with judicial fairness,
we have no more difficulty in rendering a verdict than on a prisoner in the dock.

And just so in the future the United States must appear at the bar. Some Gibbon or Carlyle,
with spectacles on his nose, will sit in judgment on the deeds we are now doing in the flesh, the chronicles of the day will present a brief and the evidence for the
prosecution, and Irving and Bancroft and others who have loved us, not so wisely, perhaps as well, will appear for the defense.
The finding of that court we cannot forecast as yet, but at our chief $\sin$, that we may shun it and reform if possible. And
that sin, marking our whole people with a brand as plain as that of Cain, is waste. The south wastes annually enough to pay the interest on our national debt the waste of the nation could pay
the principal in two years- wnste of food, waste of clother, waste of this category we count nothing as pleasure or health or rest. Money spent for theso pays large dividends, and yet this is what most of us call waste.
Malthus teaches that the time must come when the earth can not support its thronging millions, and therefore he calls war a ne cessity and wholesale death our earthly benefactor. And he is right if we must live as we do now or if our present mode of
life is necessary to our healthy existence.

But here are a few figures to controvert both the theory and foundation upon which it is based: Two thousand one hundred and twenty-five acres near Paris pro duce all the vegetables necessary
for the $2,000,000$ inhabitants of

That city and furnish a surplus low as gold, and by his process no apphances more costly than a the silver the same specific grav few frames for seeding, half an ity as gold. He has simply pack acre produces c:ops that sell for ed the silver closer by beating \$1,000.
Besides, it is now certain that not even soil is necessary for the perfection of plant life. The German, Professor Nobbe, grew in heavily fruited merely by introducing the chemical food of the plant-principally nitrogen-into the water. Nearly all these con. d to it and may be used again

And yet wo are already talking

Dr. Emmens Makes Gold and Sells It To Government.
Dr. Stephen H. Emmens of New York, a chemist of some rdputation, has been telling Di rector Preston of the United States mint about his industry of turning silver into gold. This scheme was made public some time ago, but now Mr. Emmens ells the mint director that the United States government itself since Aug. 13 has taken $\$ 2,000$ worth of his manufactured gold the mint price, and a Wash ington correspondent of the Chicago Inter-Ocean declares that Mr.Preston has found from the records of the assay office that this is true. But it may have been original and not manufactured rold-in a word, is Prof. Emmens salting his laboratory mine! To this he simply answers that he is
satisfied if the government is, that he has no secret to sell and oinvention to be bought up, and all he asks is to be let alone in the prosecution of his industry By next year he expects to be able to turn 50,000 ounces of his manufactured gold each month nto the United States mint During October he will have office, he says, The correspondent who tells of the meeting of the che $m$ ist and Director Preston on Friday goes on to quote the former directly and indirectly: have gone," said Dr. Emmens, "I am led to believe that ordinary
silver consists of groups of par. ticles having varying degrees of molecular stability. Some of inese groups are capable of dis the form of argentarum, and in this Intter appears to be altorether unstable. At the leas provocation, so to speak, it ie
verts into silver or advances into gold. This seems to explain why he chemical analysis of gold ound in nature invariably shows the pr
gold."
Dr. Emmens said it is agreed among chemists that the differ ence between gold and silver is difference of specific gravily t is not color, for Corey Lea o Philadelphia some time ago
trea ted silver in a way to give it a yellow color so that it looked like gold. Chemists called this "allotropic silver," but, call i what they would, it was as yel UNG TROUBLES AND CONAn Eminent New York Chemist and Scientist Makes a Free
