WEIGHING AN ELEPHANT.

About 200 years ago there lived a whose name was Shahjee. Princes are numerous in India, but this particular prince was long remembered on account of his beneficence and great wisdom He seems to have been the most learned

ters. Many stories are told of his in genious settlement of difficulties, and some of them are certainly curious. Once a very high official in the cour of Prince Shahjee made a vow that if he succeeded in a certain enterprise, he would distribute to the poor of his district "the weight of his own elephant in silver." Elephants were highly prized by these princes, and each kept the largest and finest for his own use. The official's vow, if hasty, was generous, and

prince of the time, and his advice and

help were always sought in critical mat-

perhaps the success of his undertaking was worth the price. The undertaking succeeded; but the official, willing to keep his oath, was met by an unexpected difficulty. There was no possible way of finding the elephant's correct weight. No scales in the country were constructed of sufficient power to weigh such enormous Elephants were not sold by the pound, and no need had before arisen for scales to weigh them. All the learned and clover men of the court tried in vain to construct a machine of sufficient power to weigh the enormous beast. It did seem probable that the poor of Hindostan would have to get along without that silver. It is possible that the efficial had thought of this objection when he made the vow. Indians are crafty, and this one might have been curning enough to leave himself a loophole of

But if any such notion had occurred to him, he was doomed to disappointment in the matter. The question was referred to Shahjee, as all such verations questions were. And it did not Like him long to find a very simple solution. That is always the way with true genius. you know. The solution it finds is so simple that every one cries out in

"Why, of course! Why didn't some body speak of that before? be conducted along a platform into a flat bottomed boat which lay by the water side. When the animal was

safely aboard, he desired the attendants to mark upon the boat's side the exact the elephant was taken out and stones substituted, until enough were loaded into the boat to bring it to the same water line as when the elephant was the

passenger.
Then the stones were weighed. If the scales could not hold all at once, part could be taken at a time, you see, and the elephant's weight was correctly the poor of Hindostan finally got the silver. A prince so wise must have also been just. Whether the official who paid the money was quite satisfied, hisfor his charity's sake, he was, and as a full grown elephant weighs several tons, the amount distributed among the poor of the district must have been very large.-Harper's Young People.
