The Hygiene of Sorrow.

In a recent issue of a New York newspaper an article by Dr. Louise Fiske Bryson formulates some distinctly modern views upon the effects of grief. The attempt to act as if nothing had happened after the advent of some misfortune, and to conduct life exactly as before, is one of the greatest possible mistakes. It is an outrage on nature, which she resents sharply in the end. Pay day comes sooner or later; and the overthrow caused by blinding catastrophe arrives, even if deferred.

The nervous system requires complete rest after blows caused by sorrow. Recent medical observations (Fere, Bassi, Schule, Zenker) show that the physical results of depressing emotions are similar to those caused by bodily accidents, fatigue, chill, partial starvation, and loss of blood. Birds, moles, and dogs which apparently died in consequence of capture, and from conditions that correspond in human beings to acute nostalgia and "broken heart," were examined after death as to the condition of their internal organs. Nutrition of the tissues had been interfered with, and the substance proper of various vital organs had undergone the same kind of degeneration as that brought about by phosphorus or the germs of infectious disease. The poison of grief is more than a name. To urge work, study, travel, the vain search for amusement, is both useless and dangerous. For a time the whole organism is overthrown, and temporary seclusion is imperative for proper readjustment. After some bereavement the custom of wearing mourning bas a distinct moral value. But its period of use must be brief: a few weeks, months, perhaps a year; otherwise deuse black draperies become a burden, an æsthetic blunder, and a source of depression in themselves. For a time they have a place, securing consideration from strangers and silence from mere acquaintance, since sorrow is one of the touches of nature that makes the whole

Where there is nearness of relationship to vature, rambles in the open air, days alone with the sea, alone in the forest, console as nothing else can. Quiet, silent drives, or even short journeys by rail, will reveal a new heaven and a new earth to one fatigued and worn by sorrow. Music, when it can be borne, has a soothing power beyond words. Books, too, have their place, those gentle companions without speech whose calm society helps annihilate time and space, and who always receive us with the same The familiar faces of newspapers and journals bring a stray comfort that even the tenderest heart is powerless to bestow. The care and companionship of children is another source of strength. Children are not watching to see how the afflicted are bearing up under sorrow, nor are they where aiting for some expression of sentiment named the overthrow of self-control. A sild is always the best comforter,

Was tering no word of sympathy yet and interest in life because its not can it be cheered up, It must be accepted, and allowed to wear itself away Readjustment comes slowly. Sorrow grief, and all great misfortunes should be regarded as conditions similar to acute infectious diseases, which they resemble in result; and later, as convalescence from such diseases. Seclusion, rest, sleep, appropriate food, largely in the unfortunate work fresh air, sunshine, interests that tax neither mind nor body, these are suffered since the Western plains have requirements in this class of illness, The care of the condition following depressing emotion calls for the same treatment in greater or less degree .-Medical Record.

How to be a Bad Farmer.

Sleep in the morning just as late as possible. Sleep until mother or wife or sister have gotte n up, made the fires, drawn the water, cooked the breakfast. Devour as much as possible of the unrelished breakfast, and grumble all the time because it is unrelished.

If the morning is damp, or the work isn't pushing, or you don't feel like pushing it, just flop yourself down with a pushing it, just flop yourself down with a newspaper and enjoy the news in the freshness of the morning while your wet they had not been the standard and thirty-three end three-fourth wet they had not been the standard and thirty-three end three-fourth wet they had not been the standard and thirty-three end three-fourth gilled as well and a well and read, saunter off to a neighbor's house and steal as much of his time as you can, talking about 'hard times." By all means, idle away the snowy months of winter. Do not think of repairing fences, clearing new ground, making compost, etc., etc., until you are ready to use them and the crop is all in a push. Then hire hands to do this work, and pay them in each that should be used to improve the farm. Do not think of such a thing

as keeping a set of farm books. Bookkeeping is for town folks, who work for success. Never calculate, never count the cost, never look ahead. "Sufficient unto the day." is your motto. Mustn't broaden your ideas on Bible doctrine, but clinch them down narrow with hide-bound, old-time, 'Hardshell' principles.

Be sure to leave your plows, tools, harness, etc., where you last used them, to take all the sunshine and fresh air. and next year you'll be surprised to know that what ain't rasted and rotted is stolen, and you are left to console yourself with a bran new outfit, on a credit.

If the day should be rainy, don't pretend to work; it might give you and the hands cold. Though the stables and cow-stalis need cleaning badly and the crib is all in a muss, just leave them for a sunshiny day, when you are needed in the field-to feel you are needed spurs

you up and makes you work better. Never economize time; you might be a success if you did but growl at your "old woman" every time she wants a new dress or a pair of shoes, or craves a ham or has a biscuit left over. And always wear a long face .- Bessie LACKET STAPLETON in The Southern Cultivator and Divic Farmer.

Inventions Needed at the South.

The common field pea, whether the

BY JUDGE WALTER CLARK.

ow pea, clay pea, the Unknown pea, or other variety, is the clover of the South. It will grow when clover will not. It will furnish more forage than clover and will improve the land more rapidly. It can be sown when desired, in a crop of corn, and thus improve land vithout losing a year's use of it for cultivation. At the North the pea is coming into wider use in lieu of clover for forage and as a land improver. This will furnish a growing market for our peas as they will not mature seed there. The great drawback in the raising of peas for seed is the great cost of harvesting and beating them out. At the North where beans are largely raised they have satisfactory bean harvesters and threshers. Southern inventive genius has always been equal to the demands upon it. If some one will invent a satisfactory pea harvester and a good pea thresher, he will not only make a fortune for hixself, but he will bring back fertility to the South. It will in crease ten fold the growing of field peas, besides making a new crop for us to ship to the North. These inventions will stimulate the growing of field peas, just as the invention of the cotton gin stimulated the increased crop of cotton.

Then, too, a good peanut thresher is badly needed for the peanut crop. Picking off by hand is slow and expensive, and none of the peanut threshers invented so far are as sisfactory. They break and shatter too many peanuts.

The price of cotton does not bid fair

to go up. The new area added every year in Texas will continually overbalance the world's increased consumption. Then there is the steadily increasing production in India, Egypt and Brazil: Shoals road, In Mexico the cotton plant lives eight Israel Creek. years and produces two crops a year. Production there has heretofore been small, owing to lack of railroads and reliable labor. This is being remedied. To compete with a country which can produce sixteen crops of cotton from one planting is using a muzzle loader against a sixteen shooter. Besides all countries south of us, irrespective of fertility, and no matter how rich we shall make our lands, have the advantage of us in the length of the season. We can not overcome the disadvantage of our short seasons for cotton. In North Carolina it is doomed, sooner or later, to disappear as a market crop. We can substitute many things. Grass is very profitable if the land is made rich enough, because it takes so little labor. Two weeks out of the fifty-two -one week in June to mow and one week later to bale up, is enough-while cotton or tobacco require the year round. The field pea offers the advantage of abundant forage, a steady improver of our lands, a good fatteuer for cattle and hogs, and a crop to ship North. The drawback in the great expense of harvesting and preparing for market should be overcome. The Sould man where does not have all that lot of lend correcting four and thresher that will enable us to increase ten fold this crop. harvesting and preparing for market ten fold this crop.
Raleigh, N. C.

The Last of the Buffaloes

Hunters know that buffaloes will never unless forced cross the iron of a Porter and T. J Jones, thence S. 651, E. railroad tract, and this fact figured 5.93 up the railr ad to the beginning. extermination which these animals have been spanned by railroads. The greatest blow dealt the bison

berds of the Northwest was the completion of the Northern Pacific track west from Bismarck to the Rocky Mountains. The road practically divided the herds, and those to the south were soon swallowed up in the general slaughter waged by Indians, pot, hide and tongue hunters, foreign sportsmen and others who were out to kill anything they saw on sight.

This was during the winter of 1882-83. The buffaloes to the north were in many scattered bands, but there was one great herd of not less than 75,000 head which had found a either red or white hunters. But they were as surely doomed as though already killed, for the railroad iron cut them off from the southern range, and the Indians of the Canadian northwest, as well as those of our country, barred their retreat into the far North, and so they were hemmed in between the two, with no possibility of escape in either direction. This last herd was completely wiped out of existence in less than four months. and before the close of the year there were but a few singles and pairs left as fugitives in that vast country where but a year or two before they could have been counted almost by the hundreds of thousands. At the end of that season of J. T. Hill & Co., Paintiff, 800,000 buffalo hides were shipped east from Glendive, on the Yellowstone River. - Scientific American.

FRISCO'S POPULIST MAYOR. Elected Over Five Other Candidates by

Strong Plurality. SAN FRANCISCO, November 10 .-- Com plete returns from all precincts of San Francisco give Adolph Sutro, populist, candidate for mayor, a plurality of 18,000, in a total vote of sixty thousand. Opposed to him were five other candidates and he has polled a clear majority of 2,000 over his opponents.

Coxey Received Fight Thousand Votes. EAST LIVERPOOL, O., November 12 .-The official count for the 18th district complete gives Taylor, republican, 20, 835; Raff, democrat, 10,000; Coxey, populist, 8,018. Coxey's voto exceeds the estimate of republican and democratic

The Fire at Abbeville.

ABBLUILE, S. C., November 12.—The house in which Mr. William F. Pell resides was burned vesterday a 1 o'clock. The fire was accidental. The house was insured for \$1,500. Most of the Master Office, Nov. 10th, 1891.

and the same to th For sty P. F. Posty and The Union LOVE'S WAY.

They say it's an old, old story, That the soul of nature came Of old, in an hour of glory, As a loving heart of flame;

With tenderest human feeling, For the proud, the hardened slave Of lust, for the outcast, reeling Through shame to a nameless grave.

And that still this old, old story Is only a mystic dream; That creation's brightest glory Is science and law and steam

But love has its science, older Than the oldest worlds of time; And its laws and forces, bolder Than the heroes called divine. It loves, and dies, and comes again:

Rejected, it flies away; but conquers life through joy or pain, Is god of each night and day. —W. H. Thorne in Philadelphia Times

Scientific Paradoxes.

These scientific paradoxes are grouped ogether in Blackwood's Magazine: The water which drowns us, a fluent stream, can be walked upon as ice. The bullet which, when fired from a musket, carries death, will be harmless if ground to dust before being fired. The crystallized part of the oil of roses, so graceful in its fragrance, a solid at ordinary temperatures, though really volatile, is a compound substance containing exactly the same elements, and in exactly the same proportions, as the gas with which we light our streets. The tea which we daily drink with benefit and pleasure produces palpitations, nervous tremblings, and even paralysis, if taken in excess; yet the peculiar organic agent called theine, to which tea owes its qualities, may be taken by itself (as theine, not as tea) without any appreciable effect.

The water which will allay our burn-

ing thirst augments it when congealed into snow, so that it is stated by explorers of the Arctic regions that the natives "prefer enduring the utmost extremity of thirst rather than attempt to remove it by eating snow." Yet if the snow be melted it becomes drinkable water. Nevertheless, although if melted before entering the mouth it assuages thirst like other water, when melted in the mouth it has the opposite effect. To render this paradox more striking, we have only to remember that ice, which melts more slowly in the mouth, is very efficient in allaying thirst.

The Wells of Tripoli.

The Friday market in Tripoli, Barbary, held in the oasis, a little distance from the town, is picturesque in the extreme. On all sides the exasperating grating of well pulleys produces a motif too Wagnerian for uneducated ears, in a pastoral symphony played by a full orchestra of buzzing insects, grasshoppers whirring shrilly, and the sun scorched palms crackling their dry branches. In each garden rise the two arms of a well, between which an enormous leathern bag mounts and descends on a rude wooden pulley, the chief instrument of the above mentioned music, discharging at each trip a flood of water.

The negro laborer uses a camel, an ox, sometimes his wife, to give the motion to the machine by going up and down an incline plane. The movement does not stop day or night during the nine months of the dry senson and it is thanks to that water, which thanks to constant care, that the verdure of a semi-tropical vegetation blooms gayly in the sand.

Under the protection of pomegranate, fig, orange, lemon and banana trees, through whose heavy foliage the sun percolates, flourish maize and wheat, vegetables and flowers of all sorts. Above it all the stately palms balance their heads in the superheated atmosphere -Scribner's Magazine.

Water and Dyspepsia. Another hydriatic method, which acts by removing the cause of disturbance, is the sipping of hot water an hour before meals, in dyspepsia, writes Dr. S. Baruch, in Times and Register. The hot water craze, which now has taken a firm hold upon the lay public, is but the legitimate outcome of a valuable therapeutic application of water, whose simplicity commends it at once to the judgment of the intelligent physician. Brought into prominence by Dr. Salisbury, who committed the error of most enthusiasts of regarding it as a panacea for most diseases, it has now been adopted by the profession as a most valuable agent in many gastric troubles. By removing the process of fermentation, by cleansing the mucous membrane of mucous, it restores tone and vigor to the gastric lining, and enables the natural forces to come into play. It is important to observe strict compliance with the rule laid down by

the originator, viz.: that the water should be sipped as hot as possible, and that an hour should clapse before a meal is taken. Examples of failure due to neglect of this rule are numerous in the experience of all medical men.
