The Famous Brands of LARD, HAMS and CANNED MEATS are packed by

Cudahy Packing Co.

SOUTH OMAHA. KANSAS CITY. SIOUX CITY.

These goods have stood the test for years and are guaranteed to give satisfaction. Your grocer can supply your wants in these lines.

B. F. SHOCKLEY, Wholesale Grocer, of Spartanburg, carries a full line of these goods.

Spartanburg Water Supply.

In Purity and Plentifulness No Community Could Be Better Supplied.

One of the prime factors in the permanent growth and development of a city, is the water supply. Indeed it is second in importance only to pure air. In this respect Spartanburg has been abundantly blessed. Not only is the supply practically unlimited and capable of furnishing a city many times as large as Spartanburg can hope to grow in many generations, but it is absolutely pure, wholesome and palatable.

The Home Water Company, of which John B. Cleveland is president and the largest stockholder, bought the

entire system has been overhauled, enlarged, extended and improved methods of filtering instituted. The main source of supply is from Chinquepin creek, a swift flowing mountain stream, the watershed of which is protected by ownership and control of the water company. This water, which for years was used satisfactorily without filtration, is now subject to the most careful treatment, with the result of as sparkling a product as ever issued from a mountain crag. The water is collected in a large basin for settling. This res-

ervoir holds a two days' supply, about 2,000,000 gallons. From this it is emptied into a coagulating basin, where with brass walls and further settling all sediment is precipitated and the water is ready for the filter. The Jackson system is used. Three large filters filled with four feet of pure white sand strain and polish the water. These filters are thoroughly cleansed twice in twenty-four hours. For this purpose a centrifugal pump with 1,000 gallons per minute is run for 15 minutes, reversing the course of the water during filtration, and with numerous agitators at work in the sand, every particle of foreign matter is quickly removed and the

These engines are supplied by two boilers, 80 and 60 horse-power.

In addition to this and as a further protection against low water or other catastrophes, a pumping station has been erected on Shoaly creek, two miles from the station, which has a 1,000,000 capacity. The necessity for using this has not arisen this year, but in the course of time and when the demand grows, this station may be operated and if the city should ever outgrow the supply of these copious creeks, the Shoaly pipes, which run under Lawson's Fork, can be tapped in a few hours and enough water had to supply New York city; so Spartanburg has very little likelihood of having to face a water famine for several hundred years at least.

ONE OF THE DAMS.

plant of the Spartanburg Waterworks Company built in 1889 and the entire system has been overhauled, enlarged, extended and improved methods of filtering instituted. The main source of supply is from Chinquepin creek, a swift flowing mountain stream, the watershed of which is protected by ownership and control of the water company. This water, which for years was used satisfactorily without filtration, is now subject to the most careful treatment, with the result of as sparkling a product as ever issued from a mountain crag. The water is collected in a large basin for settling. This res-

ENGINEER JEFFRIES.

R. A. Jeffries, a veritable genius in engineering, who won fame in Spartanburg in the early days as the only man who could make the "dummy" engine run, before the days of the electric railway, is in charge of the pumping station. His assistant is J. S. Moore and fireman, F. B. Green. Mr. Jeffries has instituted a number of devices for the safety and efficiency of the system.

The engine room is equipped with two Dean engines of 120 horse-power capacity. Only one is regularly used, the other being kept ready for use in one minute's time, in case of

THE FILTRATION ROOM.

CLEAR WATER BASIN.

The city is supplied with about 20 miles of mains, reaching all the business and residence sections. There are 137 public hydrants and many private hydrants for fire protection. There are 1,000 services and 7 public drinking fountains.

C. W. HARTY.

C. W. Harty has been connected with the water works for about 18 years. He is an invaluable superintendent and the present high state of efficiency is due largely to his thorough understanding of the business and his careful regard for the needs and wants of the community. J. P. Belue has been in the employ of the company for 13 years and has been faithful and efficient.

A visit to the pumping station is a revelation to the uninitiated as to what can be done towards purifying and cleansing water. In the basin which holds the filtered water, with cement sides and bottom, the water is so clear that the date on a silver quarter can easily be read through ten feet of it, and an ordinary newspaper lying on the bottom can be read easily. This basin contains 750,000 gallons. This reserve engine has been used only once, when during a fire at the Wofford Fitting School a plug on Pine street was blown out, and as 1,000,000 gallons daily is the supply of the city at present, this basin is more than emptied every day. The water from the filters empties in the extreme end of

THE STANDPIPE.

the basin and is taken out for the pumps at the opposite end, so that there is no possibility of getting stagnant water. Indeed in pouring over the dam that water is thoroughly aerated and from that time on it is never dormant a moment, but is constantly in motion.

The standpipe, erected on North Church street is 92 feet high and has a capacity of 2,160,000 gallons. The water pressure at the office of the company on South Church street is 60 pounds, which can be instantly increased to 90. This is sufficient for fire protection allowing a stream of water to be thrown over the tallest building in the city in all but the most elevated sections. The fire engine is rarely ever needed to reach the fires, the hose team in ninety out of a hundred cases doing the work effectively, by direct connection with the hydrants.

RESERVOIR.

FE-NO-PEP-ZONE

CURES

HEADACHES AND NEURALGIA

By removing the cause, steadies Shaky Nerves, and relieves any case of Sour Stomach. It is the best remedy for Headache on the market. Acts quickly and certainly, and is very pleasant to the most delicate taste.

READ WHAT ONE WHO IS CAPABLE OF JUDGING SAYS:

From Rev. Dr. L. M. Roper, the pastor of the First Baptist Church, of Spartanburg, S. C.

"I have been looking for several years for a headache remedy that relieves the pain and at the same time removes the cause of pain. Fe-no-pep-zone is such a remedy. Of many good remedies for headache which I have tried Fe-no-pep-zone is much the best. It is pleasant to take. It is a safe remedy even for a person of very sensitive, nervous temperament. It is effectual for any headache that results from loss of sleep, excitement, weariness or indigestion, and it leaves no bad effects behind it."

S. B. EZELL.

Wholesale and retail dealer in hardware, stoves, farm implements and agricultural machinery, lime cement and building material, bag and gun cases. Mr. Ezell was a pioneer in bringing in improved farm machinery and inducing farmers to try some of the implements that have come to be indispensable. Although giving close attention to his business, Mr. Ezell is also a live citizen and takes great interest in all affairs of a general nature for the public good. There are only two merchants today in the city who were in business when he started, in 1876. His business at 80 West Main street occupies two floors 22x175 feet and employs five people. He brought the first car-bowl of lime ever brought to this city and the first ten of shot. His policy has been progressive from the start and yet conservative.

A BATTERY OF PUMPS.

THE AUG. W. SMITH CO.

Sixteen years ago, H. Frank McGee entered a dry goods store at Anderson as clerk. He remained there, rising from year to year as his knowledge of the business broadened, until he was engaged to take a leading part with Aug. W. Smith at Abbeville. Mr. Smith came to Spartanburg to engage in cotton milling and established the Aug. W. Smith dry goods store with Mr. McGee as general manager. This is one of the most extensive concerns of the kind in the state. Two large rooms thrown together, splendidly lighted and filled with fresh, tempting designs of the latest styles for women's wear, comprise the main part of the store. Then there is a spacious annex devoted exclusively to millinery.

Dry goods of every description, tailor-made dresses, cloaks, house furnishings, carpets, matting, rugs etc. make this the Mecca for the ladies.

S. F. McCANTS.

Plumber and Gas Fitter, 50 West Main street. It has been established since 1897, and the reputation it enjoys is of the highest. The large business done requires a force of from five to nine skilled workmen all the time, and every job done by them has the stamp of merit. Mr. McCants is a practical man of long experience and knows that only good work can survive and build up the reputation of any firm. He always carries a very large stock on hand, and all orders receive prompt attention.

Morgan Wood and Iron Works

FOUNDRY AND MACHINE SHOPS.

General repair work and manufacturers of improved farm implements.

A thoroughly equipped plant for making everything in iron.

Wm. M. JONES, . . . President.
