RECOMMENDATIONS ON CONDITIONS OF SCHOOLS

COMPLETE REPORT MADE AT LAST MEETING BOARD OF TRUSTEES

RESULT OF WORK OF COMMITTEES

Not Only Pupils But Buildings Have Been Inspected By Various Physicians of City

The following report was submitted at the last meeting of the school trustees and comes from a committee appointed last fall to inspect the schools and pupils in the district. The County Medical Association asked Dr. W. H. Nardin to take charge and direct the work. The report is an important one, and should be read by everyone interested in the Anderson schools: Anderson, S. C., May 5, 1916. Hon. Board of Trustees, Anderson School District No. 17, Anderson, S. C.

The following is a report of the work and findings of the committee appointed last fall to inspect the schools and pupils in the district which is given for your consideration. What recommendations we may give are in the spirit of sanitary advice, and in no way to be considered as criticism. Last fall Dr. W. H. Nardin was asked by the County Medical Association to take charge and direct this work, and with the cooperation of the following gentlemen, without whose help this work would not have been done, Drs. Wade Thompson, E. A. Hines, O. V. Pruitt, J. R. Young, W. F. Ashmore, Carl Sanders, H. H. Acker, B. A. Henry and C. F. Foss, this work has been done, with the assistance and help of Drs. F. D. Suggs, J. R. Thompson and C. M. Sanders, from the dental profession, whose help was invaluable.

This work was hard, consuming a great deal of time and sacrifice on the part of these gentlemen who had to sacrifice their business to do this, and did so without any murmur or complaint, feeling that while there was to be no monetary remuneration that they were fully paid in the knowledge that they were instrumental in starting a worthy cause. This committee not only inspected the school children, but also the buildings and grounds from a sanitary point of view, knowing full well that the sanitary condition found would be as good as the majority of their homes, but with the idea that the school should be a model in higher ideals for them to follow throughout their lives we feel that the sanitary surroundings should be as near ideal as possible.

We made an inspection of each child in school noting the grosser defects only and calling the parents attention to the same, asking that these children should be taken to their family physician and have him make a careful examination to ascertain the correctness of the board's findings and requesting that this be corrected. The findings of the board was noted on a specially printed card, which was to be filed by the teacher of that respective grade so that at the end of the school year it could be ascertained whether or not the cause of the child's inability to make their grade was due in any part to any physical defect, for in this way only can the good of this work be established.

The notification card to the parent was carefully worded so as not to give offense to the most thin-skinned. Below you will find a tabulated record of the number of pupils examined in each grade and the number that are affected with the several defects for which they were examined.

While some of these troubles may seem trifling and far removed from the ability to learn, yet you have only to remember that small things may keep one from doing their best. We have looked for small troubles as well as large ones.

In our examinations each grade was taken and each pupil in that grade was given an individual examination, as far as practical, and there was no trouble with these with few exceptions, none objecting to be examined when it had been properly explained to them, and there was no objection on the part of the parents as far as we have learned, for at the beginning they were told that no pupil had to be examined if there was any objection on the part of the parent or pupil, and I have had several to come to me and thank me for the examination and to calling their attention to the defects found. The complete report being too long, a condensed form is printed below:

Number of children in city schools suffering from poor nutrition, 26; anemia, 191; glands enlarged, 83; trichoma, 93; defective vision, 230; defective teeth, 1,019; tonsils, 543; adenoids, 216; not vaccinated, 472; teeth brushed daily, 301; number examined, 4,988.

We recommend that as soon as possible that the board of trustees engage one or more school physicians whose duty will be to see that every child is given a thorough examination at the beginning of the school year and that all defects noted and corrected as far as possible and the teacher be informed as to the condition found so they will be in a position to understand the nature of that individual child.

That all children who have been absent from school from any cause to obtain from this school physician a certificate stating that he was no contagious disease in the child or family, and if there had been that it was no longer any danger of contagion. In this manner, and this only, can epidemic diseases in the school be stamped out and prevented in their beginning. As to the grounds and buildings, they will be taken up as they were inspected:

North Fant Street School.
We found the building well lighted as a rule, with plenty of heat, but the only means of ventilation was by raising the windows which made a draught on those near the windows, and we would suggest that those small transoms above each window, which are now fixed, be made to turn, and in this way we think that there would be a splendid ventilation at a very low cost.

We would suggest that each room be supplied with a thermometer as that the teacher could better tell how to ventilate. The toilets, both for the boys and girls, especially the former, lack both light and outside ventilation and some steps should be taken to put a modern system, and at least the lighting and ventilation should be attended to, before the opening of the fall semester. The room upstairs, now being used for the first grade, is too small and poorly lighted and with no means of ventilation, except one window, and this should not be allowed another session.

We would suggest that the basement in the front of the building be made into a play room, or gymnasium, as soon as possible. The space is there and is going to waste, and there is great need for such here in your public school system. Some of the desks are facing the light and we would suggest that all desks be so situated that the light comes from the rear of the pupil, and over the left shoulder. As soon as practical, the ceilings should be replaced by wooden ones, as the plastered ones are always falling and in that way are a menace to the children.

The Kennedy Street School.
This being the newest one would expect it to be the most modern, and we found it in splendid condition. Each room well lighted, the desks placed in a proper position, and the toilets are excellent, and we would suggest that these be used as a model for you to follow in your other schools. There is no adequate way of ventilation, except by the window method, some change should be made there. There is a thermometer in each room.

The Tokaway School.
This is well lighted and without sewer. As soon as possible steps should be made to connect with the city system. What was said as to the ventilation of the Kennedy street school will apply here.

The West Market Street School.
This is very poorly lighted and no means of ventilation. The toilets are neither lighted nor ventilated and are anything but modern, and some steps should be taken at once to rectify the same. This school is more over-crowded than any of the other schools inspected, and should not be allowed. There should be a thermometer in each room for the benefit of those who live there the best part of each day, and some way made to better ventilate them.

The Glenn Street School.
This is well lighted and heated and the toilets are very good. There are no thermometers in the rooms and no way to ventilate.

Orr Mill School.
This being a modern building it is well lighted and fairly well heated. Stoves being used for the source of heat. The water supply is not good being obtained from a pump in a surface closets, and the supply should be obtained from the city mains, which run nearby. The toilets are fair considering that they are surface privy type, but these should be replaced by fly proof modern surface closets of the Asheville type, till the connection with the city sewer system could be obtained.

South Fant Street-Colored.
The school is badly over-crowded in every room. No means of ventilation. The position of the desks are correct in all but the fifth and sixth grades. The toilets are vile, and attention is called to the state law requiring all public schools to be connected with sewer system. The drainage from the drinking fountains should also be connected with the sewer system. The other school was not inspected on account of lateness of the session.

One fact that we especially wish to call your attention to is the number of children in school that have not been vaccinated by all, and these figures do not cover all that have not been vaccinated, as some of the teachers did not understand to report to us the number in their respective grades, who had not been vaccinated, so this list is only a partial one, of 901 children examined in the white schools, 474 have never been vaccinated. This condition is not fair to the children themselves, to the community in which we live, and is a reflection both to the board of trustees and the medical profession.

FIRE YESTERDAY AFTERNOON
Mrs. Lizzie Barlow's Home Was Burned Near Sandy Springs. The home of Mrs. Lizzie Barlow near Sandy Springs was destroyed by fire yesterday afternoon at 2:30 o'clock. The building was an eight room residence, and only a little of the furniture was saved. No insurance was carried.

ADMINISTRATORS' SALE

As administrators of the estate of J. M. Sullivan, deceased, we will sell for cash at public outcry in front of the Court House at Anderson, S. C., at eleven o'clock a. m., on May 22nd, 1916, the following:

- 1-3 shares of capital stock of Riverside Mfg. Co.
- 2-1-3 shares of capital stock of Anderson Cotton Mills.
- 1 share of capital stock of Cor Manufacturing Co.
- 2 shares of capital stock (common) of Anderson Phosphate & O. Co.
- 9 shares of capital stock of Orr Cotton Mills.
- 1-3 shares of capital stock of Standard Warehouse Co.

HARRIETT D. SULLIVAN,
G. CULLEN SULLIVAN.

LADIES! LOOK YOUNG, DARKEN GRAY HAIR

Use the Old-time Sage Tea and Sulphur and Nobody Will Know

Gray hair, however handsome, denotes advancing age. We all know the advantages of a youthful appearance. Your hair is your charm. It makes or mars the face. When it fades, turns gray and looks streaked, just a few applications of Sage Tea and Sulphur enhances its appearance a hundred fold.

Don't stay gray! Look young! Either prepare the recipe at home, or get from any drug store a 50-cent bottle of "Wyeth's Sage and Sulphur Compound," which is merely the old-time recipe improved by the addition of other ingredients. Thousands of folks recommend this ready-to-use preparation because it darkens the hair beautifully, because it darkens the hair possibly tell, as it darkens so naturally and evenly. You moisten a sponge or soft brush with it, drawing this through the hair, taking one small strand at a time. By morning the gray hair disappears; after another application or two, its natural color is restored and it becomes thick, lustrous and you appear years younger.

Wyeth's Sage and Sulphur Compound is a delightful toilet requisite. It is not intended for the cure, mitigation or prevention of disease.
