Motor Efficiency vs. Gasoline Efficiency

Why the Standard Oil Company (New Jersey)
Maintains a Great Experimental Department

THERE is a point beyond which the efficiency of a motor car or truck cannot be guaranteed by its manufacturer. Thousand dollar cars have been known to render longer and more satisfactory service than others which were valued at two or three times as much.

Mechanically your "job" was perfect when it came to you from the factory. The best of materials, commensurate with the price of the car, were used in its construction. The car was as nearly ready for efficient service as the manufacturers could make it.

How do you select Motor Fuel?

From this point the responsibility for efficient operation of your motor lies largely with you (who must select and purchase fuel and lubricants) and with the refiners.

Your task is to find a consistently good gasoline, adjust your carburetor to it, and use no other. Our work is to see that this gasoline is constantly up to standard; to make sure that you can get it wherever your business or pleasure takes you in the field served by the Standard Oil Co. (N. J.); to improve it when possible, through the efforts of specialists in our Development Department.

Follow Expert Guidance

Our development men are at work seeking still further to improve our products. These experts have devoted their lives to study of the refining business and the relation between the properties of the oils and the service which they render. They deal only in facts. You can't go wrong in following their guidance.
