District 53 — Miss Cythia Drake, R. F. D. Donalds.

#### HOW MUCH FERTILIZER TO APPLY.

The question, "How much fertilizer should be used per acre?" cannot be answered definitely, but only in a general way. It is sometimes put in this form: "What is the most profitable amount that may be applied per acre?" Neither can the question in the amended form be exactly and accurately answered. The soll, its character, condition, preparation, etc., may be well known, or controllable factors, but we know not what, the seasons may be, says Hon. R. J. Redding, Director Georgia Experiment Station, Department of Agriculture, in the Virginia-Carolina Fertilizer Almanac.

We know that some crops will bear larger amounts of fertilizers with reasonable assurance of profitable returns than may be expected of other soils. A crop that occupies the soil from the fall season until spring, or early summer, will bear heavier fertilizing than will a crop that is planted in the spring and ripens for harvest in midsummer. The first case is illustrated by oats, wheat, or other small grain, or grass, especially when sown in the fall of the year. Such a crop occuples the soil during the late fall and winter, and early spring—during which periods the rains are usually abundant—ripening for harvest in late spring, or very early summer, before the burning summer heat and possible drouths of June and July. Oats and wheat therefore are ideal crops for liberal fertilizing.

Corn is rather an uncertain crop on the ordinary dry uplands of the South. It has but a short period in which to develop its flowers—tassels and silks—covering but a few days. If very dry weather shall prevail when this critical period is approaching, and for some time after it is passed, the crops may prove a greater or less failure. There can be no second effort, no second period of blooming.

It is different in the case of cotton, which commences to bloom and make fruit in June (or even earlier) and continues throughout the summer until checked by a severe frost in November. It has a number of "chances."

Cotton is therefore another ideal crop for liberal ferti

suits, or that three times as much would cause three times as great an increase in the yield. In other words, the rate of increase in the yield of cotton will not be in proportion to the increase in the amount of fertilizers applied. Two dollars' worth of fertilizer per acre may yield an increase in the crop of \$5; but \$6 worth would not therefore bring an increase of \$18.

But careful observation has shown that an application of \$5 to \$6 worth of fertilizers (properly balanced) is a safe amount to apply per acre on cotton. Many farmers in Georgia have secured satisfactory returns from an application of so much as \$800 pounds per acre.

I think 600 pounds a perfectly safe unit on upland in fairly good condition, well prepared and properly cultivated in cotton. For corn, I would limit the amount to 200 to 300 pounds per acre on old uplands.

## FLUE CURING IMPROVES TOBACCO LIKE ROASTING IMPROVES GREEN COFFEE

### Flue Curing Develops the Stimulating Aroma and Taste Found In Schnapps that Satisfies Tobacco Hunger

There are three ways used by farmers for curing and preparing their tobacco for the market; namely, sun cured, air cured and flue cured. The old and cheap way is called air cured; the later discovery and improved way is called flue cured. In flue-curing the tobacco is taken from the field and suspended over intensely hot flues in houses especially built to retain the heat, and there kept in the proper temperature until this curing process developes in the tobacco the stimulating taste and fragrant aroma found in Schnapps tobacco, just as green coffee is made fragrant and stimulating by the roasting process. Only choice selections of this ripe, juicy flue cured leaf, grown in the famous Piedmont country, where the best tobacco grows, are used in Schnapps and other Reynolds' brands of high grade, flue cured tobaccos.

Hundreds of imitation brands are on sale that *look* like Schnapps; the outside of the imitation plugs of tobacco is flue cured, but the inside is filled with cheap, flimsy, heavily sweetened air cured tobacco; one chew of Schnapps will satisfy tobacco hunger longer than two chews of such tobacco.

Expert tests prove that this flue cured tobacco, grown in the famous Piedmont region, requires and takes less sweetening than any other kind, and has a wholesome, stimulating, satisfying effect on chewers. If the kind of tobacco you are chewing don't satisfy, more than the mere habit of expectorating, stop fooling yourself and chew Schnapps tobacco.

Schnapps is like the tobacco chewers formerly bought costing from 75c. to \$1.00 per pound; Schnapps is sold at 50c. per pound in 5c. cuts, strictly 10 and 15 cent plugs.

R. J. REYNOLDS TOBACCO COMPANY, WINSTON-SALEM, N. C.

# L. W. White's.

Store is now the place to get good bargains.

He has just finished taking stock and his stock of goods which is very large needs reducing. There are a great many odds and ends of desirable GOODS WHICH WILL BE CLOSED OUT AT A

> New Goods are coming in all the time and he is having a Good Spring trade in the heart of Winter.

> He is now offering the most beautiful Embroideries ever seen in Abbeville. He has always prided himself upon carrying the most extensive and the most attractive line of Embroideries to be found in the city.

> But the Embroideries he is now offering, for beauty and novelty surpass anything he has ever shown before. The ladies show their appreciation of them by buying them freely and all seem impressed by the fact that they are not only so pretty, but are so very cheap.

Those ladies who have not seen the new Embroideries would do well to call at once, because they are going very fast and already many large pieces have been sold out entirely.

TYNER'S DYSPEPSIA REMEDY. Many Have Dyspepsia and Don't Know It.

Do you belch up wind? Taste your food after eating? See specks before the eyes? Are you pale and haggard? Does your heart flutter? Are you dizzy? Do you have pains in side or back?
