Notice to Liquor Dealers. Anderson Phosphate & Oil Co.

The Anderson Phosphate & Oil Company has bought a high grade phosphate rock (bone phosphate of lime) and high grade ammoniates, blood tankage, etc., and is making a high grade blood and bone fertilizer. There is no better fertilizer than one with a blood and bone basis. Fertilizer is like bread; you can't make good bread unless you have good material to make it with. Flour is the foundation of bread and phosphate rock (bone phosphate of lime) is the foundation of fertilizer. There are many different grades of phosphate rock as there are of flour. We have bought a phosphate rock (bone phosphate of lime) which is usually exported/to Europe where intensive farming is done, high grade fertilizer is wanted and high grade results are required. Our ammoniates, blood tankage, etc., are the best we can get. It's going to clip our profits but we will have the satisfaction of making a fertilizer that we can offer our homefolks, our next door neighbors, with confidence, for we believe there is nothing better made. We want you to try it. We want to sell our fertifizer at home. We want to take the money that is usually paid out for freights in shipping goods away from home and put it in high grade material and make a high grade fertilizer that we can sell our folks at home. It will pay to try some of our goods.
