## INDUSTRY BOOMING

Automobile Business Rapidly Returning to Normal.

New York, Aug. 23.—The automobile industry, following a brief period of depression, is booming again.

Continued increase in the demand for motor transportation is accepted as an "index to the return of industry generally to sound conditions," John C. Long, secretary of the educational department of the National Automobile Chamber of Commerce, said today.

Mr. Long said that in the second quarter of this year more than double the number of passenger cars and a third more trucks were manufactured than in the first quarter.

"The continued increase in the demand for motor transportation, along with the increase in the business of rail lines, is an index of the industry generally to sound conditions, in the opinion of automobile manufacturers," he said.

"Reports from automobile companies to the National Automobile Chamber of Commerce show that in the second quarter of 1921 the volume of business equalled 87 per cent of the same period in 1920. One of the makers is operating at 136 per cent of the 1920 basis, while the average of the other companies is 57 per cent.

"Business in the second quarter showed a distinct gain over the first quarter, as the National Automobile Chamber of Commerce members made more than double the number of passenger cars in that period and a third more trucks."

Mr. Long emphasized that "this return of activity in the third largest industry," is expected to stimulate other lines of business. This, he said, is expected to be felt strongly in the third quarter.

"The automobile industry itself employs more than 300,000 men in its factories, with as many more in accessory plants," he pointed out. "The 35,000 dealers in the country employ 100,000 salesmen.

"There are 9,200,000 cars in use. Replacement business alone amounts to hundreds of thousands a year."
