who will take the time to make the necessary inquiries and weigh the operating causes in his mind. Most virgin clays contain very sensible portions of potash, a substance indispensable to the healthy growth of most plants; therefore in adding clay to sand, we supply a salt absolutely essential to successful culture, and which does not naturally abound except in very minute traces, indeed, in soils where siliceous largely predominates. But this is not the only advantage to be derived from the admixture. Sandy soils, from their porousness, from the absence of the principle of cohesion, lose much of the riches of the manure which may be applied to them, by their natural tendency to yield to the influence of the sun through the process of evaporation.

Another evil of sandy soils arises from the natural disposition inherent in them to infiltration, or in other words, to the sinking of the manure caused by each succeeding rain. Nor is this all: such soils, except when well filled with vegetable and animal manures, possess in a very slight degree the capacity of absorbing and retaining food from the atmosphere. This defect however, may be cured by the addition of clay. However well porous lands may be manured, unless the season should be a moist one, their products will be comparatively small, because of the escape, by evaporation, of the enriching gasses, and from their natural tendency to give up that moisture without which plants cannot prosper.

Alum Spring Pills, For the Cure of Dyspepsia, Scrofulus and Liver Diseases. THESE PILLS are prepared by Dr. S. R. Campbell, from the water of the highly celebrated Mineral Springs in Rockbridge county Virginia, called the Alum Springs.

These Pills, like the water from which they are prepared, are a diuretic, promoting the secretion of urine and an alterative, increasing the secretions of the glandular system generally, and particularly of the liver. They act gently, but effectually upon the bowels, after two or three days' use of them, producing copious dark, bilious evacuation.

They also effect a determination to the surface, increasing the perspiration; therefore, they are a great purifier of the blood, and equalizer of the circulation. Each pill is equal to a common glass of the water. They should be taken before each meal, and from six to ten or twelve should be taken in the course of each day, for a fortnight, and then omit them for the same period. For the cure of the above diseases, perseverance in the use of these Pills, is all important; and if they are perseveringly used, every alternate fortnight, a cure may more certainly be expected, than under any other treatment heretofore discovered, except from the use of the water, from which they are prepared, either by an attendance at the Springs or otherwise.

They very speedily cure diarrhoeas, attended with acidity of the stomach, and are a very useful remedy for the summer bowel complaint in children; as also for expelling worms from children. From one to four should be given in three equal portions each day, to a child under six years, according to age. When given to children, they should be powdered and mixed with syrup. These Pills are easily taken, having no nauseous taste, are perfectly safe in all cases, where active fever does not exist, and do not sicken persons while using them. S. R. CAMPBELL, For sale by J.
