This Company Offers the Following Important Advantages to those About Effecting Insurance on their Lives: 1st. Insurance at Stock I ites, being from 20 to 30 Per

Cent. less than the Rates charged by Mutual Companies. 2d. Each Policy-holder is regarded as a Stockholder to the extent of one Annual Premium on his Policy, and will share

in the Profits of the Company to the same extent as a Stockholder owning an equal amount of the Capital Stock. 3d. Every Policy issued by the Company is non-forfeitable, and contains a Clause stating its exact Surrender Value.

BEFORE INSURING YOUR LIFE OR ACCEPTING THE AGENCY OF ANY COMPANY

READ THE FOLLOWING:

A lengthened experience has demonstrated that the rates of Premium ordinarily charged by Life Insurance Companies are from twenty-five to thirty per cent, in excess of what are necessary for a safe and legitimate conduct of the business. In other words, carefully and prudently-managed Companies charging "Mutual" rates have been able to return to their policyholders from 25 to 30 per cent. of the amount charged

When Life Insurance Companies were first organized, the reliability of the data upon which the premiums were constructed had not undergone the test of experience. It was thought, therefore, no more than common prudence to adopt a scale of premiums which would, in any event, meet all the presumed and unforeseen contingencies of the As long as the matter was involved in some doubt, it was better to fix the rate too

purposes of the business and the complete security of the Company. Experience, however, having satisfact arily demonstrated that these rates ive, what possible excuse can there be for maintaining them? Availing themselves of this experience, the Directors and Managers of the Universal

Life Insurance Company, at its organization, adopted a scale of premiums in accordance therewith, and which has proved to be fair and adequate, and all that was necessary to meet the requirements of the business. These premiums are about twentyfive per cent, lower than those charged by Mutual Companies. It also appeared, masmich as the rates so established were as near as could possibly be determined fair rates, and not in excess of what Insurance has previously cost the

Policyholders in Mittagt Companies, that any profits arising from prudent management justly and properly belonged to the stockholders of the Company, for the risk incurred by them in undertaking the business. Experience has shown that there are sources of profit in the practice of the business which theory will not admit of being considered as elements in the calculation of the These results from a saving in the mortality of the members of a Company owing to the medical selection of good lives, a gain in interest on the investments of the Company over that assumed in the calculation of its premiums, the profits

minor sources. Profits from these sources, in a Company possessed of a capital of \$200,000, and doing a fair amount of business, would give to the stackholders dividends largely in excess of what were counted on by the Director of the Universal at the time of its organization. They have, therefore determined to divide among the policyholders of the Company a large part of the projets accruing from the sources named, all of which

The plan adopted for such division is as follows: Every person who may hereafter insure with the Universal will, for the purposes of division, be treated as a stockholder to extent of one Annual Pressium upon his Policy; and will share in the profits of the Company to precisely the same extent as a Stockholder owing an equal amount of the capital stock. By this system of Insurance, original with the Universal, the policyholder secures

the following important advantages:

FIRST. Insurance at the regular "Stock" rates, requiring a primary outlay of about twenty to thirty per cent. less than that charged by Mutual Companies, and which is equivalent to a yearly "dividend" paid in advance of that amount on mutual rates. This low cost of insurance is worthy of attention. Since its organization this Company has received in premiums from its policyholders the sum of \$1,517,000. To effect the same amount of insurance in a Mutual Company would have cost them an initial outlay of \$2,000,000. By allowing its policyholders to retain in their own possession this excess of \$483,000, the Universal has virtually paid them a "dividend" of \$483,000, and paid it, too, in advance, instead of at the end of one or more years. It is impossible to find any example of a Mutual Company furnishing insurance at so

low a cost by returning to its policyholders an equal amount upon similar receipts.

Second: Participation in the legitimate profits of the Company, upon a plan which secures to the policyholders the same treatment which Directors and Stockholders award to themselves. This system of participation, in connection with the low "stock" rates of premium, must necessarily secure to the policyholders every possible advantage to be derived from prudent and careful management.

The low rates of premium compel economy, and, independent of participation, guarantee to the policyholder his insurance at a rate which is not in excess of the cost in well managed mutual companies: while, by the proposed plan of participation in what may be considered the *legitimate profits* of the business, the cost will be still

further diminished. Thus by the combined advantages arising from low stock rate and participation in the profits it is confidently believed that the UNIVERSAL LIFE INSURANCE

COMPANY offers insurance at its lowest practicable cost. Those of the existing Policyholders who desire to participate in the Profits under the new Plan can do so by making application to the Head Office, or to any of the Agents of the Company.

The Company is in a sound financial condition. Ratio of Assets to Liabilities 136 to 100. GOOD RELIABLE AGENTS WANTED, who will deal direct with the New York Office, and to whom full General Agents' Commissions will be paid.
