INSTEAD OF DARNING

HOW USEFULNESS OF STOCKINGS MAY BE PROLONGED.

Does Not Pay to Spend Much Time in Mending Hosiery—Are Useful in Making Rugs for the Nursery.

In these halcyon days of guaranteed hosiery—at a very moderate price, too—it can be said with emphasis that it does not pay to spend much time darning stockings. When they have really begun to give out, the putting of a whole hour on a large heel hole is nothing less than wicked. The sensible housemother prefers to put by the ragged socks and stockings and to buy new rather than to spend on prolonging the life of a couple of pairs for two more wearings the time that would suffice to make a new outing shirt or simple tailored waist.

But there is no need to throw old black stockings in the rag bag for want of ways to use them. First of all, a well worn black sock is one of the best things to be had for use in sponging on dark cloths with household ammonia or other cleaning fluid. It leaves no light colored lint, and is soft and absorbent to handle. A supply should be always in some convenient place if the men of the household give a way of wearing black or dark blue socks for everyday.

Worn rag carpet is no longer a thing despised. Through the winter many home lovers return to the old fashion of sewing carpet rags, to be woven into scrubable rugs for nursery and sitting room, as well as for the furnishing of the summer bungalow. The touch of black is most desirable to set off the brighter stripes, and for this purpose old black stockings cut around and round in spiral fashion, or as an apple is peeled, to make a long strip, will be found useful to the very toe.

One notable housewife uses stockings in the mop that she polishes floors and wipes up with, as they are softer than the mops usually sold. Wherefore, save the old stockings.

Potato water is good to take, and washes from cloth.

A root-bound fern soon indicates its condition by drooping fronds.

Sunflower seeds make better bait than cheese for the mouse trap.

It is better to wipe off meat with a wet cloth than to let water run over it.

Jellied veal can be deliciously seasoned with lemon juice and celery salt.

Equal parts of milk and lukewarm water are excellent for sponging palms.

A pinch of borax in cooked starch will make the clothes stiffer and whiter.

A bread pudding may be deliciously flavored by a few slices of candied orange peel.

To place ferns upon the window sill means their death, as they cannot live in a cold draught.

Dried lemon peel sprinkled over coals will destroy any disagreeable odor in the house.

When blowing out a candle, hold it high and blow upward to keep the grease from running.

Hot biscuits, generously buttered and spread with currant jelly are delicious served with game.

A better iron rest than the ordinary metal stand is a firebrick, as it does not cool the iron so rapidly.

Home-Made Vinegar.

Save all your apple parings, and put in crock or granite pan and cover with water, let stand a few days, then strain through a thin cloth. A large salt sack will do—and squeeze, but not hard enough so the parings will come through. Rinse all your syring pails and pitchers and put in the juice, or you can put in a little brown sugar. Then set where it is warm and let work. If you will have any mother from old vinegar put that in but it will make its own mother. This makes good vinegar and saves buying at stores.

Potato Farel.

Peel six large potatoes, cut them in halves lengthwise and scoop out the centers, leaving the shells about one half inch in thickness. Season two cups of chopped raw beef with one tablespoonful of softened butter, one tablespoon of tomato catsup, one tea spoon of minced parsley, one-half tea spoon of minced onion, one-half tea spoon of salt and a few grains of pepper. Fill the potato shells with the meat, sprinkle with buttered crumbs and bake with equal parts of butter and hot water.

IMAGE SENT BY WIRE

Recent French Invention That Opens Great Possibilities.

Photographs Can Be Sent by Telegraph With Great Accuracy and Some Speed Whenever Necessary Apparatus Exists.

Paris.—It has been possible for some time to send photographs by wire with great accuracy and some speed, wherever the necessary apparatus exists. Such transmission has for a year or so formed part of the regular Paris service of an enterprising London journal. Suppose, however, that a reporter finds himself at a country telegraph station and desires to send to his paper a picture of some kind in connection with his story—portrait, or the photograph of some building or locality. He is evidently no better off than he would have been a century ago. A recent process, however, the invention of a French engineer named Mortier, would make it possible for him to send his picture over a single wire, with the aid of the ordinary telegraphic instruments—or rather, it would enable him to telegraph data from which the picture could be built up at the receiving station. This process is described by R. Deulin in La Nature, where we read: "Mortier's process requires neither costly and delicate apparatus nor any peculiar installation, nor a special wire. It will work anywhere, using under normal conditions the existing telegraphic plant of the smallest localities and without the least interference with its ordinary administration."

"What was necessary to obtain this result? First, to take up in a new form one of the original conceptions of Charles Cros, about 1860—the translation of images into a series of numbers, then to give to the symbols numerical text a form that will make it transmissible by all telegraphs, with or without wires. Finally, to effect a typographic reconstruction of the image.

"The first thing to do is to cut the picture up into tiny squares, each one of which has the tone of the part of the image in which it is situated which tone is represented by a conventional figure serving for its telegraphic transmission. But this process, which has the inconvenience of being slow and uncertain, has been happily replaced by Mr. Mortier by the following, which may be called automatic:

"The picture to be transmitted is first printed in an enlarged form susceptible of easy analysis. This analytical print has two valuable properties—first, it is naturally cut up by a grille of fine lines; secondly, the squares do not appear as more or less gray or transparent elements whose tone cannot be evaluated numerically, nor as groups of points whose light value can be stated in numbers only after a laborious measurement, but rather as black silhouettes against a white ground or vice versa, of forms so diversified as to embrace an extended scale of shades and so striking as to be identified at sight.

"These expressive figures arise spontaneously in the course of the manipulations, simple enough, that turn out the analytic proof. By what artifices has it been possible so to discipline the active force of the light that it shall express its own localities in characters more discernible than figures? The zoned cellular transparency, a simple sheet that has been placed in the printing frame between the original negative and the sensitive paper, before the printing of the analytic proof, operates this miracle by itself alone. At first, the black silhouettes show a simple marking in squares, but under the microscope the appearance of the network gives place to an arrangement of square cells of complex structure which reproduce exactly the typical outlines of the symbolic silhouettes of the preceding illustration.

"After the preparation of the print, the analysis of it amounts to no more than the simple reading of a page and the jotting down of the figures in order."

What Makes A Woman?

One hundred and twenty pounds, more or less, of bone and muscle don't make a woman. Its a good foundation. Put into it health and strength and she may rule a kingdom. But that's just what Electric Bitters gave her. Thousands bless them for overcoming fainting and dizzy spells and for dispelling weakness, nervousness, backache and tired, listless, worn out feeling. Electric Bitters have done me a world of good, writes Eliza Pool, Depew, Okla., "and I thank you, with all my heart, for making such a good medicine." Only 50c. London's Italian Colony.

The Italians in London, England, are sufficient of themselves to form a large town. There are as many as 12,000, about 2,000 of whom are ice-cream vendors and 1,000 organ-grinders. The other 11,000 are chiefly engaged as plaster bust sellers, artists' models, cooks, valets, teachers, artists, restaurant and hotel keepers, and so on.
