

Prudential Rates

I am a Candidate for the Prudential Hundred Thousand League this Year

Help me to the goal, that I may win one of the best Life Insurance trips. I have a good start so far of the one hundred thousand.

As we have something better than others, and something better than usual, I feel warranted in a good sum advertising expense to inform the people. To give you an idea of the dependable soundness of the PRUDENTIAL'S Policy and its popularity, the Company issued and revived more Life Insurance in one year (1916) last year, than any other of the more than 260 companies operating in the U. S. had in force from its entire record of existence, excepting eight, according to the Blue Book published by the Spectator Company in 1916.

Age Nearest Birthday	Whole Life	20 Payment Life
20	\$14 83	\$22 43
25	16 61	24 41
30	18 91	26 81
35	21 90	29 76
40	25 85	33 46
45	31 18	38 24
50	38 83	44 61
55	48 98	53 34
60	63 08	65 68
66	87 71	88 11

The Prudential Issued and Revived in 1916 \$591,000,000 Life Insurance

THE REASON: The PRUDENTIAL has the STRENGTH of GIBRALTAR. It has the lowest rates with annual dividends, further reducing the premiums. The policy is plain with no catches. The policy provides without cost, that if the holder becomes physically disabled, he is excused from paying the premiums, and this without effecting the policy.

You can surrender a 20-pay life policy with annual dividend off at the end of 20 years to the Company for more cash than you have paid the Company. Drop me a card and I will see you.

Better Farming in the South

WILLIAMSON PLAN OF CORN CULTURE

Has Proven Successful in Coastal Plains And Sandy Loam Soils

J. N. HARPER, Agronomist

E. McIver Williamson, of Darlington, S. C., has originated a plan of corn culture which has been adopted by a great number of farmers residing in the Coastal Plains of South Carolina and Georgia with excellent results.

Since a number of inquiries have come to the Farm Service Bureau about methods of corn culture it is considered advisable to recommend the Williamson method to farmers in the coastal region or those who have sandy loam soils. The following is an outline of the method in Mr. Williamson's own words:

"Break the land broadcast during the winter, using a two horse plow or, better, a disc plow. Bed with turn-plow six-foot rows, leaving a five-inch balk. When ready to plant, break this out with a scooter. Plow deeply in the bottom of this furrow, using a Dixie with wing taken off. Ridge then on this furrow with same plow still going deep. Run the corn planter on this ridge, dropping one grain every five or six inches.

"Plant early, as soon as frost danger is past. Early planting is especially needful on very rich lands where stalks can not otherwise be kept from growing too large.

"Give the first working with a harrow or any plow that will not cover the plant. For second working use ten or twelve inch sweep. Corn should not be worked again until the growth has been so retarded, and the stalk so hardened that it will never grow too large. This is the most difficult point in the whole process. Experience and judgment are required to know just how much the stalk should be stunted, and plenty of nerve is required to hold back your corn when your neighbors, who fertilized at planting time and cultivated rapidly, have corn twice the size of yours.

"When you are convinced that your corn has been sufficiently humiliated, you may begin to make the ear. The

plants should now be from twelve to eighteen inches high.

"Put half your fertilizer (this being the first used at all) in the old sweep furrow on both sides of every other middle and cover by breaking out this middle with turn plow. About one week later treat the other middle the same way. Within a few days side corn in first middle with sixteenth-inch sweep. Put all your nitrate of soda in this furrow, if less than 150 pounds, use one-half of it. Cover with one furrow of turn plow, then sow peas in this middle broadcast at the rate of at least one bushel to acre, and finish breaking out.

"In a few days side corn in other middle with same sweep, put balance of nitrate of soda in this furrow, if it has been divided, cover with turn plow, sow peas, and break out. This lays by your crop with a good bed and plenty of dirt around your stalk. This should be from June 10th to 20th, unless the season is very late, and corn should be hardly bunching for tassel.

"Lay by early. More corn is ruined by late plowing than by lack of plowing. This is when the ear is hurt. The stalks thus raised are very small, and do not require anything like the moisture even in proportion to size that is necessary for large, sappy stalks. They may, therefore, be left thicker in the row. Large stalks can not make large yields except with extremely favorable seasons, for they cannot stand a lack of moisture. Corn raised by this method should not be over seven feet high, and the ear should be near the ground."

For Piedmont Section.
For the Piedmont section the Williamson Plan can not be closely followed but must be modified. Half of the fertilizer should be applied before planting. The other half should be applied not later than when corn is knee high. The nitrate of soda should then be applied when the corn is waist high.

Raise Corn As War Measure
In response to the call for food supplies in view of war conditions, the Southern farmer should plant as large a crop of corn as possible. He should fertilize liberally and cultivate thoroughly so that maximum crops may be produced. It is recommended that from 500 to 600 pounds of fertilizer be applied on Piedmont soils and from 800 to 1,000 to coastal plain soils.

SLOAN'S LINIMENT FOR RHEUMATISM.

The torture of rheumatism, the pains and aches that make life miserable are relieved by Sloan's Liniment, a clean clear liquid that is easy to apply and more effective than musky plasters or ointments because it penetrates quickly without rubbing. For the many pains and aches following exposure, strains, sprains and muscle soreness, Sloan's Liniment is promptly effective. Always have a bottle handy for gout, lumbago toothache, backache, stiff neck and all external pains. At all druggists, 25c. 1

How To Give Quinine To Children.

FEBRILINE is the trade-mark name given to an improved Quinine. It is a Tasteless Syrup, pleasant to take and does not disturb the stomach. Children take it and never know it is Quinine. Also especially adapted to adults who cannot take ordinary Quinine. Does not nauseate nor cause nervousness nor ringing in the head. Try it the next time you need Quinine for any purpose. Ask for 2-ounce original package. The same FEBRILINE is blown in bottle. 25 cents.

Teachers Examination

The next regular teachers' examination will be held Friday, May 4. White applicants will report at court house; colored applicants at Macedonia school building. Work begins promptly at 9 o'clock.

W. W. Fuller, Co. Supt. Education.

For Sale or Rent.

My store building and residence at Red Hill possession given Sept. 1, or Jan. 1, 1918. This is one of the best stands in cuntry for a country store.

H. E. Quarles, Cold Spring.

To Prevent Blood Poisoning

apply at once the wonderful old reliable DE FORTER'S ANTISEPTIC HEALING OIL, a surgical dressing that relieves pain and heals at the same time. Not a liniment. 25c. 50c. \$1.00.
