Avoid Sedative Cough Medicine.

If you want to contribute directly to the occurrence of capillary bronchitis and pneumonia use cough medicine that contain codeine, morphine, heroin and other sedatives when you have a cough or cold. An expectorate like Chamberlain's Cough Remedy is what is needed. That cleans out the culture beds or breeding places for the germs pneumonia and other germ diseases. That is why pneumonia never results from a cold when Chamberlain's Cough Remedy is used. It has a world wide reputation for its cures. It contains no morphine or other sedative.
