TREATMENT OF DIPTHERIA.

ADVICE FROM A PHYSICIAN OF HIGH HAND.

lone and terribly in Brooklyn and this city that the opinions of the wisest and most experienced physicians should be sought in the hope of finding some remedy for it. Among the poor, bad air and food are among the most active causes of the great mortality from it; but still it will only too often single out and

course pure air, if possible, and good food, even if it have to be begged, should be procured. Any really good home-made soups, be they of beef, mutton, chicken, are just as good and often far better than beef ten; and they may be changed from one to the other as they pall upon the patient's taste. Good, undiluted milk is quite as useful as ways be prevented from turning or feverish, by the addition of a large pinch of soda to each teacupful of milk.

ing disgust or nausea.

they are generally wanted early ed a land as deep as possible, without and abundantly, milk punch is the doubling teams from seven to nine best; but it should always be made with the addition of soda or lime another was plowed as shallow as pos-

mixed with sugar, and not in solutio By giving it in this way it dissolves slowly in the mouth and gradually and efficiently comes in contact with all the diseased part

the curtain of the palate will be drawn up, and the whole back part of the throat, down to the windpipe, will be exposed to view, without the use of any harsher means to obtain a view of the parts involved by the disorder.

improvement seems to take place for one, two, or more days; sometimes not until nearly up to the fourth day. But courage and perrewarded with success; certainly four or five times out of six.

This treatment is considerate but efficient; the child never betendants; and generally with a little management, takes or does all least not harsh or distressing.

riate tincture of iron may be re- cisions in the branches of the tree. quired. If the mouth be dry, glycerine may be put into it frequent-
