Just now the position of the comet is such that lines drawn from it to the North Star and the fixed star Vega would form almost an equilateral triangle. At 11 p. m. the comet is nearly overhead, where the naked eye catches sight of it at once by reason of its peculiar appearance—that of a hazy patch of light, or, as it has been described, that of a hairy star. The nucleus is visible as a bright point, and the haze surrounding it is continually extending and now resembles a very large, bright nebula. With an opera glass the denser part of the tail near the head can be easily distinguished, but a telescope is needed to show the bifurcation of the comet's tail, which is several degrees in length and growing as the comet continues to approach the sun. The orbit of the comet has been computed by Prof. Perrine. It is now in a parabole in such a way that its nearest approach to the sun will occur on August 27th at a distance of 31,000,000 miles. SATURDAY, the twenty-second day of
August, 1903, at 11 o'clock in the fore-Probably the largest order ever given for paint in the State of North Carolina was received by the Odell Hardware Co., of Greensboro, N. C., from W. A. Irwin, of Greensboro, N. C., from W. A. Irwin, Esq., of Durham.

The order was for 5,000 gallons of Devoe lead-and-zinc paint, to be used on the large Irwin Mills and their cottages now being built in Hartnett County.

Many of the leading paint manufacturers were eager to secure this order, and it speaks volumes that the preference was given to Devoe lead-and-zinc, which is undoubtedly the foremost paint in this country to-day.—Greensboro (N.
