The Yorkville Enquirer.

Entered at the Postoffice in Yorkville as Mail Matter of the Second Class.

YORKVILLE, S. C. TUESDAY, OCTOBER 31, 1911.

Major Hemphill takes charge of the Charlotte Observer today. Good.

There is very little talk about macadam roads now-a-days. It has been conclusively demonstrated that sand and clay roads are cheaper and better.

In reply to the Observer's question whether it believes that "if the women in South Carolina could vote they would secure a better enforcement of the law than the men."

There has been some effort to show that Superintendent Swearingen was somewhat extravagant in his estimate of the property values destroyed and increased expense incurred by the removal of school books.

The Enquirer does not assert that anybody has received a rake-off in connection with the school book deal. It does assert, however, that if it had had the matter in charge, it could have gotten a big rake-off for itself without increasing the present cost of books to the children.

Mr. W. F. Caldwell, who has for several years been editor and proprietor of the Chester Lantern, has sold the property to a Chester company, preparatory to his taking charge of the Columbia bureau of the News and Courier.

The cotton conference called by Governor Colquhoun at Texas gathered in New Orleans yesterday and discussed various matters without coming to an agreement on any particular line of action. The question of state aid along the line of the valorization plan being practiced in Brazil for the protection of the gree, cotton industry of that country was introduced.

While the course of the expense of buying new school books is a considerable burden on parents, that is not the sole or even the most important objection to these frequent changes of school books.

The change is harmful rather than beneficial, even though it is made to place a burden on the parents. In the first place, any book the expense and responsibility of which any experienced publisher is willing to stand for, is good enough for use in the schools.

Beautiful Glider Motionless in Air Like a Huge Bird. The wind was blowing at the rate of forty miles an hour when the aviator carried the machine to the top of the sand dune.

So complete is the Observer's comment, that there is little or nothing to add. It is assumed that this advertisement was patronized by the Intelligence in the first instance for business reasons, and that in taking his ad out he intended to do as much as does the Intelligence.

LOCAL AFFAIRS.

NEW ADVERTISEMENTS.
