#### About Mules.

The Louisville Industrial "Gazette" says, "Few of the farmers of this country are aware what a debt of gratitude they owe George Washington for the introduction poses.

Previous to 1783 there were very few, and those of such an inferior order as to prejudice farmers against them as unfit to compete with horses in work upon the road or farm. Consequently there were no jacks, and no disposition to increase the stock; but Washington became convinced that the introduction of mules generally among Southern planters would prove to them a great blessing, as they are less liable to disease, and longer lived, and work upon shorter feed, and are much less liable to be injured than horses, by careless servants.

As soon as it became known abroad that the illustrious Washington desired to stock his Mount Vernon estate with mules the King of Spain sent him a jack and two jennies from the royal stables, and Lafavette sent another jack and jennie from the island of Malta.

The first was a gray color, sixteen hands high, heavily made and of sluggish nature. He was named the Royal Gift. The other was called the Knight of Malta; he was about as high, but lighter made, black color, and a little fiery, even to terocity.

The two different sets of animals gave him the most favorable opportunity of making improvements by cross-breeding, which he called Compound, because he original jacks. The General bred his blooded mares to these jacks, even taking those from his family coach for that purpose, and produced such stubborn mules for one year. that the country was all agog to breed some of the sort, and they soon became quite common. This was the origin of improved mules in the United States. Though over seventy years ago, there are now some of the third and fourth generation of the Knights of Malta and Royal gift to be found in Virginia, and the great benefits arising from their introduction to the country are to be seen upon almost every cultivated acre in the Southern States. Notwithstanding the enormous increase of late years, arising from a sys-tematic course of breeding in the Northern States for the Southern market, mules

were never more valuable than at present, or more ready sale at high prices.

PROSPECTUS. On the 17th instant, the undersigned propose to commence the issue, in this city, of a journal to be styled THE DAILY CHRONICLE. The want of make our debut.

The Capital of Sonth Carolina should sustain now, as it did before the war, at least two newspapers; and the State is an abundantly large field of operations from which to glean the public favor. The approaching Fall already gives token that our people are recovering from their great financial depression ; and we may reasonably anticipate an early solution of the now fretful political problem. It is on this rising tide that we hope to swim.

We do not promise much in behalf of the Chroni-cle-our faith shall be told by our works ; but we

can say this much, that as citizens of South Carolina, long identified with her interests, we shall expend our means and devote our energies to establish what we conceive will be a welcome visitor in every household.

We shall give the latest news and liveliest gessip: pert paragraphs ; telegrams hot from the wires ; commercial intelligence fresh from the curb-stones of "'Change;" and a special report of all the at-tractively horrifying accidents and incidents of the day. Politically, -

Our sentiments are for the present expressed. We shall work for the good of the public.
