HOW BEST TO INTEREST PUPILS IN

The following admirable essay was read before the last Teachers' Association at Belton, by Miss Nora Hubbard, and was unanimously requested for publication. We commend it to the careful attention of every teacher and school

patron in the County: How to increase the interest of the pupils in school work.

This is a question which daily con-

fronts us, and sometimes puzzles not a

little. Could we find explicit direction, which, if carefully followed, would certainly produce the desired result, how eagerly would we all avail ourselves of were like cooking, how easy it would be ! We could meet together, exchange recipes, and return to our work, feelling confident of success if we followed the directions. But unfortunately for us, such is not the case, and any directions we may be able to give on this important subject will somewhat resemble "Mrs. Mudlaw's recipe for potato pudding." This old lady had an enviable reputation for making potato pudding, and was once waited upon by an anxious young housewife, who, with note-book and pencil in hand, begged for directions. The old lady began: "Boil your potatoes." "How many?" interrupted the young housewife. "Why just as many as you think you'll need-if the potatoes are small it will take more of them than if they are large—then beat the whites of So near is God to man,

- In view of modern progress in embalming, desiccation and other methods of preserving the dead for an indefinite time, it is interesting to note that it has been estimated that more than 400,000 human mummies were made in Egypt from the beginning of the art of embalming until its discontinuance in the Seventh Century. There were three grades of embalming. For preserving his relative in the most approved style the Egyptian had to pay \$1225; in the second grade the operation cost about \$377; the third method was so cheap as to be considered "within the reach of the poorest citizen," and involved the pickling of the body for some days, and then a boiling in bitumen.
