A REMARKABLE CASE FROM ILLINOIS. I suffered for five years with Mercurial Rheumatism, which was the result of Potash and Mercurial treatment by physicians, for Constitutional Blood Poison. They not only failed to cure me but made me a physical wreck, and my life a burden. I then commenced taking Swift's Specific (S. S. S.), and after using a few bottles was entirely cured of the Rheumatism, which the doctors brought on by their remedies, and the Blood Poison they failed to cure. I cheerfully commend S. S. How a Bullet Travels.

Howard Carr, an authority on shooting and a gentleman well informed on all matters of detail pertaining to the bull's eye, gave a reporter some interesting information on the queer actions of a bullet after being discharged from the mugsle of a gun.

A bullet, he declared, sighted for 1,000 yards has three separate and distinct motions, and in cases where the stubby and blunt express lead is used it has four. The first is its velocity or straight motion of journey; the second is the rotary motion, caused by the bore of the gun, which makes it plow through the air, and the third is the trajectory motion, or drift, attributable to the attraction of gravity, which forces the bullet sideways. When the express bullet is used it follows a line similar to the edge of a corkscrew. The latter is ascribable to the extra friction on the bottom of the ball,

which is constantly lowering. I had this illustrated by placing sheets of paper forty yards apart on a level, and the course of the bullet could be seen by collecting the papers and laying them one over the other.

A ball has a large drop when traveling world. any great distance. For instance, take 1,000 yards. The bullet, if keeping the course it originally started out to follow, would land a distance of over 225 feet above the bull's eye. But it starts to drop immediately after leaving the muzzle of the gun, and at between 550 aud 600 yards the ball is only sixty feet above the line of the bull's eye, and a consider-200 yards it has decreased in proportion, and the aim is only forty inches above creased 1.450,000 acres. the bull's eye, but at 500 yards it is over

How to Begin Housekeeping.

Times, April 23.

"So you want to marry my daughter?" "Yes sir."

"Are you prepared to give her a pleasant home, and the luxuries to which she has been accustomed?" "I don't believe I am, sir; I only get 37 a week."

"Yes. Well, do you know that young women now-a-days expect to begin housekeeping in the same style that their parents leave off?"

"Oh! yes, I know all about that." "You do. Well, how can you reconcile \$7 a week with my surroundings?" "I-I thought," responded the intelligent young man, while his face beamed with love and hope, "that we could live time comes for you to—to leave off, and then the matter, would sort of regulate itself, you know."—Philadelphia Call.
