THE FREAKS OF LIGHTNING. ome Results of the Weather Bureau'

Washington Frening Star.

The circular on "Protection from Lightning," just issued by the weather bureau, contains no mention of the freaks of electrical storms which that branch of the Government service has been recording for some years

So mysterious and little understood is the fluid electricity even now that it is so widely utilized for mechanical purposes that its vagaries in nature excite the utmost interest. The question recently discussed by Italian scientists as to whether a bird could be struck by lightning seems to be answered in the affirmative by the destruction of a whole flock of wild geese on April last. Twenty-two of them, flying north over Casnovia. Mich., were slain by a bolt from the sky. Such an extraordinary event would have been regarded as an ominous portent a cen-

tury or two ago.

The action of lightning as an explosive is a subject that has elicited special attention from the weather bureau of late. Up to date no theory has been found to account for it satisfactorily. On April 30, 1894, a brick house at Keokuk, Ia., was struck, and as completely wrecked as if a bombshell had done the work. One day earlier a farm house near Kiowa, Kan., the property of D. R. Streeter, was completely ruined by a bolt, the roof, loors and windows looking as if they and been shot full of holes. At Barbertown, Ohio, on June 18, 1893, the dwelling of William Martin was literally torn to fragments by a similar

Inasmuch as 200 people are kille every year by lightning in the United States, special protection for the per-son is surely called for. One ingenious scientist has devised an umbrella with small copper chains attached to the ends of the ribs. These are long enough to reach the ground. A thunder storm coming up, they are loosened and permitted to dangle, while the owner of the contrivance walks along in perfect security. Under such circumstances metal about one's body is dangerous-for example, the wires in a lady's bonnet. But this peril may be overcome by fastening similar chains of copper threads to the frame-work of the headgear. Though a bolt should destroy the bonnet, the electricity would spare the wearer and

pass off into the ground. An instance on record is that of a ady who raised her arm to shut a window as rain began to fall on a summer's day. There was a sudden blaze of light, and, though she was unharmed, her golden bracelet disappeared so that no vestige of it could be found. A sulphurious smell was observed in the air. This, scientific men say, is quite usual when lightning strikes, being due to an excess of ozone generated by the electricity. The atmosphere in its usual condition contains one ten-thousandth part of ozone. When this proportion is increased inconvenience is felt by men and animals. It has been sug-gested that sometimes persons found dead after a stroke of lightning, though showing no marks of any injury, may have been suffocated by

Lightning does occasionally strike twice in the same place. A few years ago St. Aloysius church, in Washington, suffered. A flash ran down the lightning rod to within twenty feet of the ground. Then it left the rod. passed through twenty feet of air space to a water pipe and broke a washstand. Six years later the same thing was repeated in every detail, the electricity leaving the rod at the same point, jumping to the water pipe and smashing to pieces the washstand, which had not been mended. The Church of the Incarcination here was badly hit some time back. To prevent a repetition of the accident the edifice was protected by a very elaborate and costly system of rods. The most important rod, of course, protects the steeple. It ought to terminate in a sharp point; but the church authorities thought it more appropriate that it should be surmounted by a cross, on top of which was placed a rooster. Thus the usefulness of the defensive contrivance has been almost wholly destroyed, for so it stands at pres-

The introduction of lightning rods in Roman Catholic countries was strongly opposed on religious grounds. Pious persons declared that the devices were of the devil and called them "heretic rods." It was a long time before the churches would adopt them, though buildings of that description have always been the greatest sufferers from celestial fire, on account of their tall steeples. During the century a certain church in Carinthia was struck so often that services were discontinued during the summer months. It was hit four or five times a year on an average. In 1778 a rod was put on and there was no further trou-

At Stratsund, Pomerania, a church was the scene of a very appalling oc-currence. On a Sunday, the building being full of people, a ball of fire en-tered and fell upon the altar, exploding and doing great damage. As to the nature of phenomena of this sort science knows almost nothing. Such lobular lightning is seen quite often, out nobody can guess how it is formed. All that can be said is that it is fire a foot long, and three inches wide electricity very highly concentrated. Balls of lightning are sometimes seen | cracking of whips. This performance rolling along the surface of the sea. Occasionally they strike vessels. As a rule, they will burst violently with a loud noise and disastrous ef-

The Washington monument would have been destroyed by lightning long ago but for the protection afforded by he most complete and admirable arrangement of conductors ever devised. Standing 555 feet high, in the middle of a wide space of flat ground, the gigantic obelisk is dangerously exposed. The apex is surmounted by an alumithat pass down into a well 600 feet below and beneath the water level. On April 5, 1885, during the passage of a heavy thunder cloud, five immense bolts of electricity were seen to flash between the monument and the cloud within twenty minutes. No damage was done. Two months later, on June

Big ships nowadays are usually equipped with a big system of conducarranged as to carry off the lightning quantities of fish immediately floatinto the sea. In old times, fire from ed to the surface that twenty-eight the skies was one of the most serious | wagon loads were collected for maperils that threatened mariners. Dur- | nurc. ing fifty years, from 1790 to 1840, no fewer than 280 vessels of the British Tomlinson, to whose work on the pronavy were struck, causing a loss of perties of lightning the writer is much navy were struck, causing a loss of \$750,000, killing 100 men and badly injuring 250 more. When the protected ship is hit the electricity passes down the mast into the ocean, as wore such a skin. Tents were made water runs down a pipe. She may of that material on this account. In reel under the blow, but no damage the Avannes, for the same reason, results. One of the most severe en-counters was that of the H. M. S. hats. Attempts were formerly made

was struck at Martinique. Two days later smoke was seen issuing from her figurehead, which, when cut down, was found to contain a nest of fire.

The freaks of lightning are extraordinary. At Wooster, O., in June, 1892, a two-story bay window was cut from the main structure of a house as if by a knife. In the same month, at | ed by silken cords in the middle of a Norwich, Conn., a bolt went into the large room. It is always best, under ground and jerked out of the earth such circumstances, to keep away 100 feet of iron water pipe. In Octo- from the windows and chimneys. 100 feet of iron water pipe. In October, 1843, three men were struck at the bottom of the mine shaft 330 feet below the surface. It was supposed that the lightning must have passed down in the shaft by a chain. There are many cases on record where people killed by lightning under trees have been marked in one part of the body or another with the image of a tree or of a leaf. This has been considerered very mysterious; but it is probable that such phenomena are largely attributable to imagination. Marks made by lightning are apt to be forked and branched in such a fashion as to suggest likenesses of the sort to exci-

There have been instances where lightning has entered a powder magazine and dispersed the gunpowder without setting fire to it. This is more easily understood when it is learned that there is difficulty in setting fire to gunpowder by sending a The powder is simply scattered without being ignited. If anything interferes with the free passage of the electricity, however, the powder will There have been several striking powder magazines. At midnight, August 10, 1857, a magazine at Joudpore, in the Bombay presidency, was blown up in this way, killing 1,000 residents. At Luxembourg, June 26, 1807, a magazine containing twelve tons of powder was struck, ruining a

There are some parts of the world sky being lighted continuously by tively secure. - Chicago Journal. vivid flashes, while the ears are deafened by the roar of celestial artillery without pause. One of these localities is the east coast of San Domingo, a region shunned on this account by men and beasts at the rainy time of the year. There is a little place in the republic of New Granada where nobody will live on account of the frequency of the lightning strokes. Thunder, by the way, is caused by the electric fluid rending the air, which has not time to get out of the way. The "rolling" of thunder is due to echoes thrown back from the

Practically, all of the 200 deaths caused by lightning in the United States annually occur in the five literally in a flash. In nine years, ending in 1892, 2,235 barns, 102 churches and 664 dwellings were struck in this country. During the same period there were about 4,000 fires from lightning, with a property loss of about \$14,000,000. Risk from lightning in rural districts is five times greater than in cities. Oak trees are struck fifty-four times as often as beeches, though nobody knows why

Though physicians say that electricity is a form of motion, the fluid is a mystery yet. Its presence every where helps to make it interesting Children shuffle over the carpet with their feet and thus generate enough electricity to light the gas with spark from the finger. Anybody can do that, though the carpet must be wool and very dry, as well as the floor beneath. Tesla, the famous expert, nade a light burn in his hand from electricity passing through his body. When a powerful electrical machine s being worked in a room, projecting sharp points about the furniture or fixtures are apt to be seen in the dark tipped with light. This is an artificial production of the so-called St. Elmo's fire, which sometimes appears on the masts of vessels at sea, exciting the superstitions of the sailors. On rare occasions church steeples are illuminated in the same strange fashion. During thunderstorms peoples heads have exhibited the phenomenon

each hair being terminated by a minute luminous tuft. Electricity has not always been found a safe plaything. The kite experiment of Franklin was repeated in France in June, 1753, by M. Romas, a provincial judge of scientific tastes. He made a kite eight feet high and three feet wide, the string being wrap ped with copper wire. At the beginning of a thunder storm he raised it to about five hundred and fifty feet. Instead of sparks he obtained flashes of accompanied by loud noises like the was imitated in August of the same year by Professor Richmann, of St. Petersburg, the apparatus being set up in his dwelling. In the midst of the entertainment a large globe of bluish-white fire appeared, with a report like a gun. The experimenter fell back and died instantly, while his assistant was rendered unconscious. The house was filled with sulphurous vapors and was considerably damaged. Marks of burning were found on the

dead man's body. In 1857 lightning drawn from the clouds was made to yield sparks ten feet in length. The ancients believed that lightning never struck deeper than five feet in the earth. The Emperor Augustus always sought refuge in a cave during thunder storm. Former rulers of Japan are said to have fled to safety under similar circumstances to a grotto specially provided for the purpose, 5th, the obelisk received a tremendous | which contained a reservoir of water. stroke, whick slightly cracked one of the stones at the top, but the injury fire of the lightning. This was certainly a mistaken notion. Fishes are sometimes killed by fire from the skies. In 1670 the lightning fell upon

Epidemic of Twins.

Every now and then there occurs some appalling catastrophe or devastating epidemic to shake one's faith. This time it is an outbreak of twins in New Hope, Pa.

The modest Quaker village had, up to the time of its recent visitation, been an easy-going, quiet place, whose citizens observed all the conventionalities of civilization. But that was in the golden age of yesterday. To-day all is changed. "It began with the butcher's wife,

Mrs. Charles Johnston, and her relative, Mrs. Edward Johnston. The wife of Constable Lewis Bennet and Mrs. Ezra Hall fell into line a few days later with a pair each, all girls. When Landlord A. J. Solomon, of the Farmers' Hotel, returned home the other evening, he heard the crying of charge from a Leyden jar through it. twins, while triplets sung a welcome for his friend around the corner, John Bartlett, the livery stable keeper. Mrs. John McDonald, the wife of a farm hand, and the estimable betterhalf of the Rev. Mr. Gray presented frightful disasters caused by lightning | twins to their husbands within a few hours of each other, and the physician who attended them announced that Mrs. James Battle and Mrs. John

Peterson had also done likewise. Twins was only a beginning. The dread visitation spread like the pestilence in the surrounding homes. large part of the town. But the whole affected district covers only a worst accident of this kind happened few blocks. Yet we may go on and at Brescia, August 18, 1769, when name the names of New Hope citizens, 207,600 pounds of powder belonging to the republic of Venice were exploded by lightning, destroying a who now suddenly find themselves hustling to support twins. Even sixth part of the city and 3,000 human Joshua Whitley, the oldest citizen, is light-hearted and happy with his eighwhere at certain seasons thunder and teen children in the sight of the lightning are practically incessant, the | calamity from which he feels compara-

Nothing About the Corpse.

"When the sub-treasury scheme was burning brightly in the hearts of the Populists," said a Western member to a group of his Congressional associates in the Speaker's lobby "the Republicans used to tell a good campaign story out in my district. An old settler in one of the Western counties of Kansas had died, and was about to be consigned to his last resting place. The region was sparsely settled, and the town had no minister to conduct the services. So they sent for a minister from the nearest settlement to officiate at the funeral.

"All the neighbors turned out on months from April to September; the the occasion and fairly filled the hall highest rate being in June and July. in which the services were conducted. Such strokes are very apt to produce After finishing his sermon the parson a condition of suspended animation. called on the acquaintances and friends Accordingly, the weather bureau re- of the deceased to make a few remarks commends that everything possible on his life and character; but no one nings. shall be done to stimulate respiration responded. a few appropriate remarks. It would | 200. The trouble is not in the law, broth be too bad to convey our dead friend to his last repose without a tribute to wealth of the United States were divided his memory from the lips of one who knew and loved him as a friend and paighbor. But no one in that confellows would be riding in palace cars and neighbor.' But no one in that concourse said a word.

"At last an old man with a knotty skull and a strange face arose from a rear bench and broke the stillness. 'If there's nobody here to say nything about the corpse,' he said I'd like to make a few remarks about the sub-treasury scheme."

Danger of Blood Poisoning.

A medical paper commits itself to the statement that many lives are lost the meat they need, but cotton is their each year in consequence of the lack of a little common sense respecting simple cuts or wounds on the hands or other parts. Several cases have been ecorded of inquests relating to persons who have died from blood poisoning arising from small cuts on the hands. The history in all of these cases varies but little, and is practically the same. A man, for example, while working at this trade, or even while carrying out the simple detail of cutting a piece of bread, receives a small cut on the hand. The injury is so trivial that anything is considered good enough with which to stop the The experiment suggests new possibilibleeding, and this end having been attained no more is thought of it. The small wound is left to take care of itself, and is exposed to all sorts of filthiness and sources of infection. By good luck, nothing may happen; but the public will do well to bear in mind that from the most trivial injury to the skin acute septicaemia may supervene, and may rapidly be followed by a fatal termination. By thorough at- oped: ention to cleanliness the untoward consequences of a wound liable to beome infected can be effectually prevented. On the other hand, when the epticaemic attack has declared itself, as a rule little can be done by the sureon to stem the virulence with which t develops. It should, therefore, be borne in mind that so long as wounds, however small, remain unhealed, the risk of contracting blood poisoning will always be present .- New York

- There are 230 John Smiths named in the New York City Directory.

- The dog never perspires, and on that account is so constituted that he cannot drink water as most animals do. This is nature's provision to prevent him from swallowing large quantities of cold water when the body is overheated.

From Cabin to Castle.

A recent news item in the New York Herald affords a striking illustration of the possibilities of life in this wonderful

Thirty years ago Thomas Nevins, a poo farmer's boy on the estate of Lord Killeen in County Meath, Ireland, came over to this country to seek his fortune. He set-tled at Orange, N. J., became a contractor for street building and railway work, and in the course of time he accumulated

shadow of whose feudal towers he had labored in his days of poverty. He found that the present Lord Killeen was in need of money and finally succeeded in persuading him to sell his residence for And so the ancient stronghold is now

the property of a man who would not have been admitted within its gates thirty years ago. The castle is rich in history. It was built in the eleventh century, and sheltered the cowardly King John before his barons bulldozed him into signing the great charter. The story shows what a man can do in this country. Many a foreigner, like Nevins, comes here poor and unknown, and before he dies makes fame and for-

tune. But do you ever hear of a penni less American laborer going to Ireland or to England and then coming back with money enough to purchase one of the Vanderbilt or Astor palaces? There is no such case on record. The golden prizes for brains, pluck and industry must be sought for in this land of prom ise, where every man has a fair field and a fighting chance.—Atlanta Constitution.

That Incubator Baby.

NEW YORK, May 26 .- Having lain dormant in her wire cradle in the Robinson baby incubator exactly three months, baby heiress of Edward Clarence Haight has now been removed, placed in swaddling clothes and turned over to the manipulations of her trained nurse. Little Miss Haight, it will be remember ed, was prematurely born on Feb. 24. she arrived three months earlier than was expected, and her mother, nee Florence Hedden Granger, died in giving her birth, after Dr. Carleton and his assistants had exhausted their scientific resources to save the mother's life.

Dr. Carleton determined to try to save the infant, and sent a hurried note to the W. F. Ford Surgical Instrument com-pany. Mr. Ford telegraphed to William G. Robinson, tinsmith, the inventor and maker of baby incubators, Robinson hurriedly drove up to the Haight mansion with his apparatus, and the fragile, feeble and almost inanimate infant was placed inside.

There she has remained for three months, having been taken out but twice or thrice daily for a moment while her toilet was hastily made. The young lady was fed upon medicated milk. Yearning eyes watched her day and night. As she grew older and stronger she stretched her little limbs, shrugged her wee shoulders and yawned—wondering, no doubt, what all the fuss was about.

Under ordinary circumstances she should have been born May 24, instead of novel experience. Soon she will be christened. She looks very comfortable

Sam Jones on Politics.

"The Third Party or party of the Third Party, or whatever you call it, may get to Heaven, but they'll never get to Washington. It's not on the way. Washington is the wickedest place on earth. It is the home of the devil. The average Democrat and Republican politicians are little better than rascals, but the Third Party man is a fool. You can reform a rascal, but did you ever undertake to monkey with a fool? "They want to borrow money from the Government at 2 per cent, when the Government is now borrowing at 5. We hear a great deal of fools talking about the rich getting richer and the poor poorer under the present laws. There never was a greater lie and I'll prove it."

He cited the cases of Vanderbitt. Stew-

not to blame. I preach nearly every day ""Surely," he said, 'some one in to 8,000 people and here's a little preach-the congregation will get up and make er sitting behind me who can't average

A Southern Experiment.

A Memphis paper calls attention to a amore, Ala. It seems that two brothers are operat-

ing on a five-thousand-acre tract of land. They employ eighty-four whites and not a single negro. They raise all the food crops necessary for the people and the stock in their little community, and all principal crop. But they do not ship their cotton to northern markets to be worked up in eastern mills. A mill on into yarns and another mill grinds the seed into oil. The yarn mill cost \$113,-000 and pays a handsome profit. The success of this experiment should

convince northern farmers who are seek-ing southern homes that they can come This, however, is not the main lesson taught by the Sycamore enterprise. The two brothers who are running this large plantation have made it plain that it is possible to establish small farming communities in the South that will be selfsupporting and practically independent. ties for southern agriculture.-Atlanta

Killed by his Mistress.

NEWBERRY, S. C., May 27 .- A negro night by a negro woman. She claims it was entirely accidental, but there are some who doubt this statement. It took facts are about as follows so far as devel-

The woman has been the mistress of the man for some time. It is said that they quarriled on the street in the after-noon, and those who live in the neighporhood say that there was quarreling at ing took place. The man was outside the door when shot and the woman claims that she knew nothing of his being out there. She says she had only taken up the gun to move it and it went off ac-cidentally and the load went through the door panel and killed the man instantly, shooting him through the throat. After a time the door was opened and to the surprise of those in the house, as they claim, they found the dead body on the piazza. The woman who admits hav-ing shot was arrested last night and is

Randitti in Texas.

LONVIEW, TEXAS, May 23 .- At 3 p. m. five robbers entered the First National Bank of Longview. The president and cashier were ordered to hold up their hands and the robbers secured \$2,500. Several officers and citizens met the robers and a constant firing was kept up, during which George Buckingham and J. W. McQueen were killed and Marshal Muckelroy badly wounded. One of the robbers, a small, dark complexicaed man, was killed. Over four hundred shots were fired. The remaining rob-bers escaped with the dead man's horse and gun. A large posse are in

as conceived the idea of taking a band of Southern field hands to Egypt to work in the cotton fields there. As the pay is something like 12 cents a day it is not believed that Mr. Moore's band will be a

very large one.

— Dooly County, Ga., is in a happy financial condition and one of which its nancial condition and one of which its nancial condition and the proof of the condition and the proof of the condition and the proof of the condition and people have a cause to be proud. It does not owe a cent and has \$18,000 in the treasury, more than enough to run the county both this year and the next. The grand jury has therefore decided not to levy any taxes at all this - In New York at present all church

and school property is exempt from taxation. Two amendments are now before the constitutional convention of that State. Both call for the taxation of all church property, and one of them pro-poses to tax school houses also—in fact, all property not belonging to the Govern-ment, State or national. S. - Near Fayetteville, N. C., four per-

sons standing in a yard near a house heard a whizzing sound and saw a ball of fire descending toward them. An instant later it exploded with a stunning report, and all four were knocked down and were insensible for several minutes. One was partially paralyzed. Near them was an ox, which was killed instantly.

- An English visitor in Washington — An English visitor in Washington was asked, at the Country Club, the other day, what peculiar characteristics of the American people impressed him most forcibly. Without the slightest hesitation he replied: "Their love of titles. I always fancied," he said, "that you were all democrats and republicans and had a contempt for titles and that sort of thing; but I'll be blessed if I've seen a dozen men in Washington with-out handles of some kind to their names. The whole population seems to consist of generals and colonels and senators and judges and governors." Emery Storrs, when he first came to Washington, said to General Grant: "I have found here men called general who never unsheathed a sword or wore a uniform; I have found men who never opened a law book called judge; men who have been defeated for the United States Senate called senator; men called governor who have aspired to the governorship of their States but never got even so far as a nomination, and now I'd like to know what sort of a title is given to a genuine, straight-out, bona fide notary public."

His Circus.

"I say, John, did ye see the circus?" elled a little boy to another, last eve-

'No-o-o-o, I didn't see the circus, sneeringly said John, who had been kept in the house for disobedience. 'Humph! You ought to have been there; biggest show you ever seed; elephant and camel and boa contwisters and-and everything! If I couldn't go to the circus I'd run away.

"Who wants to go to your old eir-eus?" yelled John. "I had a circus in 1864 under an act approved in 1864. all to myself. Tied the milk can to the cat's tail and the cat knocked est of the bonds, which has been rundown two flower pots, and smashed the glass in the dining room window. Git had any property. away wid yer old circus; been to more'n four hendred, and did'nt have so much fun; and didn't git licked, nuther;" and the boy who had been to the circus felt as if he had got hold of the castor oil bottle by mis-

PHOTOGRAPHIC

AROUND THE

WORLD

FREE!

A Large and Wonderful Collection of Instantaneous Photographic Views.

THE Landscape Views are of the best character, representing the magnificen cenery of America, Switzerland, Ireland, Germany, Italy and all other prominent countries of the globe, street scenes in the leading cities, showing people, vehicles, the great Cathedrals, stupendous ruins, nonuments, statues, oriental scenes and exquisite lake and river views. This remarkable volume is altogether different and far more valuable and entertaining than anything which has ever been offered before—it is more like a Mag-nificent Album, containing the—

Grandest Views of the World.

Nothing better or more valuable could adorn the Centre Table or Library of any By buying \$20.00 worth of Drugs (cash) we will give one of the above elegant books free. A card will be punched each time a purchase is made. Call and examine it.
