Boys, and, for that matter, selves the heroes of such stories, like grip. They overlook the oft-times too-prominent egotism of the narrators and are tells it.

The old Indian fighters, unlettered though they were, had no lack of lis- to hold the blade in the scabbard. teners to the tales they cold of the said of Andrew Poe that the one story gave a mighty tug at the knife. he took special delight in telling was, as far as its effect upon his hearers was concerned (and upon the teller as well), a more moving history than ped from Pope's fingers and went fly- eyes as they looked upon the splendid anything ever written by that ecentric genius and man of letters, Edgar Allen Poe.

These names are brought together not because there was any kinship betheir handiness for use by way of com-

The story that Andrew Poe told in his old age to many a listening group was one that was afterward told by father to son until finally it found a place in print during the thrilling adventures of Indian warfare.

The scene of the story is laid in what is Washington County, Penn. Andrew Poe and his brother, Adam, lived twelve miles back from the Obio river, at Harmon's Creek, a small settlement of white people.

This was in 1781. Andrew was then 39 years old: Adam 33 years old. It was the boast of Andrew many years afterward, when he had become bent, wrinkled and gray, "that no man ever took more satisfaction in hunting deer, bear, wolves and buffalo"-for buffalo had not then entirely disappeared from the Ohio alley-"than I have; but the greatest enjoyment I ever took was in hunting Injuns."

In 1781 Andrew was the perfection of physical strength and endurance. His undoubted courage was recognized throughout the border settlements of Pennsylvania and Virginia.

In the spring of the year named Harmon Creek settlement had suffered from Indian attacks. While the Poe brothers and their nearest neighbor. Kennedy, were away on a scout, a party of Indians had visited Kennedy's cabin and murdered his wife and child.

In June of that year a band of seven Wyandots stole into the settlement at night and carried away from his cabin as a prisoner a man named William Jackson, 60 years old, who lived alone.

The men of the settlement were quickly called together to pursue the savages. The trail was token up and twelve of the settlers on horseback rode toward the Ohio river. On the thinking the red man was drowned. and they pursued on foot.

They came upon a little creek that entered the Ohio. Its water was time there was to be no shamming. muddled, having evidently been recently disturbed.

The keen judgment of Andrew Poe told him the marauders were not far convinced him that the Indians were led by a savage named Big Foot, a celebrated chief of the Wyandots, a man his tribe.

the trail to the left, leading away from the stream, Andrew Poe turned twelve feet below him, crouched under | that killed his companion. the river bank, two Indians.

Their guns were cocked and they were looking intently toward a spot running down the shore. Andrew from which they heard a noise. One of the savages was of a gigantic size. This was the famous "Big Foot." The other red man, though, w as smaller, fully the size of the white man who was looking at them through again in favor of the Indian, but anthe willows.

Poe leveled his rifle at Big Foot and ramrod slipped from his hand and bepulled the trigger. The powder flashed | fore he could recover it Adam had fired. in the pan. The Indians then saw him and gave a yell of delight. Poe retreated farther into the bushes.

At that moment a number of shots were heard one hundred yards or more down stream. The other five Indians had been overtaken by their white drew Poe's bloody face in the river, pursuers. These shots for a moment turned the attention of Big Foot and his fellow from Poe. He had reprimed his rifle and again elicked the trigger. Again it missed fire.

One must do rapid thinking when fighting Indians. Flinging his rifle from him, Poe, quick as a cat, jumped over the bank down upon the two red men As he fell he threw one arm around

World's Largest Cotton Mill.

Columbia, July 1 .- W. B. Smith Whaley, the Charleston boy that was ever dreamed of. When he conceived To save his life, Poe knew that he the idea of building the greatest mill When he went to work and financed his scheme successfully and built the The smaller Indian was squirming great mill, and made the woods give waterworks, fire department, electric lights, department store, etc., the mill kings of this and other countries from Poe's grip. But the knife slip- came to see and opened wide their mill covering eleven acres of floor space. Some ventured the prediction that the mind that could plan and successfully carry out such a scheme was capable of even greater and more daring financial and industrial schemes. Even then in this man's was afraid to shoot, fearing to hit his mind a scheme, the immensity of which was such as to make it seem visionary, was being evolved and the details were forming. Of this latest plan the newspaper

some time, but until the financial arpublication. The press dispatch from Kansas City, Mo., last uight, printed Big Foot was in a fury, and roared to-day, however, gives a general idea his commands to the unskillful one in of the great scheme which Mr. Whathe Wyandot tongue. The latter has- ley is resolved to carry through to tily procuring another tomahawk, success. Mr. Whaley is to undertake 000,000 more than is stated in the With a sudden movement he seized dispatch. The gentlemen out West, hand and flung it into the water. Big interests, when Mr. Whaley first un-Foot had relaxed his hold somewhat. folded his plan agreed to take Poe tore himself from that grasp of up othe rest of the capital stock if steel, snatched up a gun with his left Mr. Whaley would raise \$3,000,000 smaller Indian through the body. Big in doing. Some time ago he went to feet, seized Poe by the neck and leg matter, having the security for the Poe started for the stream he caught great Eastern manufacturer did not lose five minutes in taking nearly a million dollars of the stock when the Here a terrific contest took place. plan was laid before him. That the Western gentlemen have kept their part of the agreement is shown by the dispatch.

For the past few months the plans Poe succeeded in getting an advan- for this great mill have been on the side by side, thus affording plenty of connecting each of the sections with the other and presenting a magnificent general front. The mill will be equipped with such electrical maresources. He pulled the Indian out | chinery as is contained in the Olympia

The general plans also call for a cleaning off the country where the mill will be located and the establishment of a city of modern houses about the size of the city of Columbia. The idea is to erect first-class residences in water-works, electric light systems, electric fire alarm system, and in fact, everything needed in a city of 25,000 people. The city will be the property of the great mill company and everything will be managed by the company. The idea seems almost Utopian, but the success of such a plan is shown here in the Olympia town, which contains more than six hundred two-story

residences. Now some will wonder why this great mill is to be put up near Kansas City. The purpose is to manufacture the immense quantities of cotton cloth coverings for cured meats needed by the great packing houses in that part of the world. Perhaps other goods will also be made, but this will be the principal business of the big plant and there is demand for the product.

Why they Shave Mules in the South.

Martha McCullough Williams in the course of the parrative of "Next to the Ground' (McClure, Phillips & Co.) explains many customs and superstitions peculiar to the negroes.

Not the least interesting of these is the reason given for the shearing of mules.

"When it came to shearing mules," Mrs. Williams writes, "Dan was an artist. He had spent two hours or more at it the day before. Manes were trimmed to half-inch upstanding fringes, tails banged to the pertest tasseled tip, even the ears had been shorn of their long inner hairs. 'Dan had a firm faith in witches. Now a witch, it is well known, cannot ride down a horse or mule unless there are hairs long enough to twist into a stir work, not to name being ever so much more bidable since witches, working Expect every man to do his duty unhindered put the devil into the best broken of them." Lakes in the Desert.

will produce better and more certain Always, too, round these ponds there crops than lands which depend upon is a great increase of wild life and rainfall for moisture, so ponds or vegetation seems to spring up to shellakes made in arid lands are the best ter it. Quails, blue and brown, seek duck ponds in the world. Never on the waters, as do wild turkeys and any Northern body of water are wild doves. Jacksnipes find it as readily fowls packed together as on these arti- as do the ducks, geese and swans. ficial sheets, says the New York Sun. Small birds fly to it from no one knows

of this character called Mitchell's explained mysteries about fowl flights. Lake. It was made by damming up the lower end of a natural rainfall, long by a half mile wide and shoulder deep in the centre.

and edible weeds, and some wild rice | a part of a dusty waste, untenanted was planted in it. Then ducks visited it in tens of thousands.

They were confined in so narrow a space that killing them was no trouble at all. If driven away by repeated gunfire, they flew some miles to the south or west, and finding no other water, returned. Thus on shooting days at Mitchell's Lake there was a constant egress and ingress of wild fowls and the gunners shot until their heads ached.

The lake depended upon rainfall, aud in dry seasons there was sometimes not more than two inches of water in its centre and much of its bottom was dry. In those seasons jacksnipe preferred it and settled upon its flat in swarms.

Many times a hundred mallards have been killed by a single gun at Mitchell's Lake between daylight and late breakfast, and the snipe have been taken off it by the gross. The pond lies 150 miles above the Gulf coast, and is a stopping place for birds which make the salt water their winter home.

Nine miles south of San Antonio, near the old Spanish mission and not far from the San Antonio River, some men have purchased 300 acres and will make a pond similar to Mitchell's Lake. It is intended solely for a private shooting association. Among the members are Rolla Heikes, a professional trap-shot, and E. Hough, a sportsman and novelist.

These ponds are now being built in many places through the West and Southwest. The land in those regions is cheap, and much of it is not fit for anything save to be put under water. Where the course of a dry creek can

be found, a creek draining a good bit of territory when there is anything to drain, the construction of a shooting lake of this kind is not costly. The dirt may be had, as low as \$3 an acre, and building a dam amounts to little.

However small a lake of this kind may be, and however far in the desert. the wild fowls find it as soon as it has water and duck feed. They do this though it be 500 miles off the regular

air lines which they travel in going south or coming north, the two routes Just as irrigable and irrigated lands | being distinct and widely separated.

Soon acres It soon became rich in duck grass | which twelve months before were but save by the tarantula and centipede, show every form of wild life of which the West is capable.

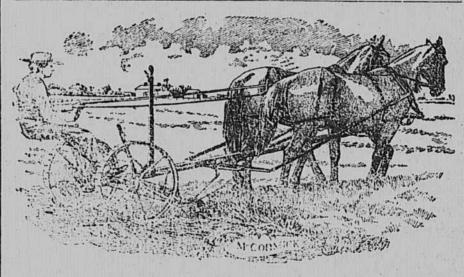

Another Reason for Baldness.

The difference is this Men wear their hats for protection, women wear theirs for ornament. Consequently a woman's hat never interferes with the circulation of the blood to her scalp. A man's almost always does so. Men wear hats tightly clasped about the head; women's hats rarely touch the head at all. The only contact is where the hairpin fastens the millinery confection to the coiffure.

Well, what has all this to do with luxuriant hair? It has much to do with it. The temporal arteries that supply the scalp with blood run up the side of the temples. Constriction of the articles and veins that supply the blood and the pressure of the hat upon these blood vessels cut off in part the circulation to the scalp. This makes the hair unhealthy and inclined to drop out.

So the man who wishes to preserve his hair past the time when it usually falls out will see to it that his hat is so constructed that it presses lightly -if at all-on the temples.

McCORMICK VERTICAL LIFT MOWERS.

The only Mower for rough and stumpy ground.

THE devices for raising and lowering the Cutter Bar, and for throwing the Machine in and out of gear are very ingenious, but simple in construction and operation. So perfect is the action of these devices that the driver can run the McCormick close up to a rock, stump or tree and, without stopping the team, raise the bar to pass such an obstruction, throwing the Machine out of gear, and then lower the bar afterward, throwing the Machine in gear automatically without loss of any time.

This is only one of the many good devices of the McCormick. A careful examination of the mechanism of this Machine will certainly convince you of its superiority in every detail over any other Machine on the
