

House and Farm.

ASHES FOR SWAMP POTATOES.—A correspondent in the Southern Cultivator says "I notice the question is asked, why is the best fertilizer or manure for swamp potatoes? From the experience I have had, in manuring the swamp potato, I must say that rotted (hard wood) ashes when properly put on, has produced over all others I have had any experience with. The plan that I adopted was to open a deep furrow with a spade, and put in a plenty of ashes. Next to the ashes, and a pure crop may be realized on the poorest soil. Cow-manure is good—so are cotton seed and stable manure; but after experimenting with the ashes, they will all be abandoned, provided ashes can be had. I experimented on a poor soil as I said, and the result was as fine a crop of potatoes as I ever saw on any kind of land. Rotted ashes is good for cotton also, and almost any kind of vegetation. I am convinced there is not a better fertilizer made on any plantation than rotted ashes. So every one will find it greatly to his interest to take special care of it.

WHY I AM A POOR MAN.—"Well, Ha!" in the Planter's Advocate, took the following plain story why he is poor, "I am poor because I buy more than I sell. In the first place, I buy a part of my meat from North West; my fish comes from Portland; for the taking of which the Mainlanders receive a bounty from the Government. My onion seed and all my garden seed I buy from Michigan. I sold the wool from eighteen sheep at 37 cents per pound to an agent of a hat manufacturing company at Reading, Pennsylvania; four months thereafter bought a hat from the same company, paying at the rate of six dollars a pound for the wool. The hide of a buck I sold at five cents a pound. It went to Elmira, N. Y., was tanned, sent back, and I bought it at 35 cents a pound and I weighed more than it did when I sold it. My axe handles come from Delaware, my pen, paper and ink from New York. Am I the only fool in Georgia?"

THE HOG.—The hog is properly a European animal, though the wild hog was found in the mountains of Syria and Asia Minor, and still exists in the wilds of the Atlas mountains in Africa. The prohibition of wine's flesh among the Egyptians and Hebrews, shows that it was known to a domestic animal even in those early times. Among the Greeks and Romans the hog was rather popular as a flesh furnishing animal. It is the most prolific of all the animals, any given weight of flesh can be produced at less expense than any other form of animal food, but it is the hardest of digestion and least healthful of all our meats. In cold climates, however, the largest amount of fat it contains is important as a heat producing element, and therefore Northern nations use largely of pork. The filthy habits of the hog are owing to domestication. In the wild state the hog is a cleanly animal, living almost exclusively on vegetable food, while the domestic hog is omnivorous, and quite fond of animal food.

Happening to pass along where my neighbor was cutting up some horse manure for his horses, he remarked it was the best thing one could find for his horse at the time of the year. The food being warm, when taken into the stomach, the heat let go their hold on the lining of the stomach to feed on the sweet food, and so pass on out. He says he has seen the dung alive with them, and the horses felt better afterward. As the dung fly deposits the eggs on the flanks and legs of the horse, if you will take the pains to grease those places with any kind of grease, say once a week, those eggs will not hatch even in the stomach, if they have been greased before taken in. This is on the principle that an ounce of prevention is worth a pound of cure, and oftentimes more.—Exchange.

HOW TO MIX IT.—As the time for whitewashing has arrived, the following receipt for making the wash, recommended by the Scientific American, is published. It answers for brick, wood or stone. Slack about one half bushel unslaked lime with boiling water, keeping it covered during the process. Strain it and add a look of salt dissolved in warm water and boiled to a thin paste, one-half pound powdered Spanish whiting and one pound clear glue dissolved in warm water. Mix these well together, and let the mixture stand for several days. Keep the wash thus prepared in a kettle or portable furnace and when used put it on as hot as possible with either painters' or whitewash brushes.

A LAUNDRY SECRET.—The following recipe for doing up shirts will be found of use by many house-wives. Take two ounces of fine white gum arabic powder, put it in a pitcher and pour on it a pint or more of water, and then, having covered it, let it stand all night. In the morning pour it carefully from the pitcher into a clean bottle and cork it, and keep it in a cool place. A small amount of gum arabic dissolved in this manner will give to lawns, either white or printed, a look of newness when nothing else can restore them after they have been washed.

Feed horses liberally and allow plenty of time to rest and digest their food. It is better to work them steadily for eight or nine hours, than to keep them in the field ten or twelve hours, letting them stand still one-third of the time. When a horse needs to go home to lanch or supper the horse need food also. A small pint of water with a pint of corn or oat meal stirred into it is a capital thing for a tired horse. It will enable him to work an hour or two longer in an emergency.—Exchange.

CHEESE PUDDING.—One quart of milk, five eggs, four tablespoonfuls of flour, one tablespoonful of salt, boil the milk; moisten the flour with cold milk; add to the hot milk and boil three minutes; add the eggs and boil up a half cup of sugar flavor. Turn into a dish for the table, and, before sending to the table, strew half a cup of sugar over the top. It is better to spend a few hours hanging lace doors and gates than sitting about the carouse table.

House and Farm.

Mr. Editor:—I sincerely regret that I did not again comply to encroach upon your valuable columns, because I did not and do not desire to enter into a controversy with one whom I esteem so highly. But I must needs impose upon your generosity in self-defense. I am willing to leave the question, whether my testimony was "utterly unqualified," or not, just where it stands now. If I have not demonstrated satisfactorily that my testimony was based upon strong grounds, I will forever to add any new matter, so as to render to you, in order to avoid a reply which would prolong the discussion.

On the second point, however, I have a few words to say. As you have so generally abstained from being rigorous with me, I will not dwell upon the singular, but perhaps unimportant fact, that you have considerably modified your expression with reference to the presence of strychnine in whiskey, for in your first editorial you said it was "often though not always" to be discovered, and that "it is a well known fact," while in your second editorial, you speak of the question as "whether whiskey does contain strychnine." I will let that pass, and proceed to quote from your last editorial, as follows: "The determination of the first point we leave to his memory and that of others. As to the second, we can appeal to his adding to sustain our own, for when asked on the witness stand if he had ever known the quantity of strychnine in whiskey to kill the imbiber, he answered 'not of his own knowledge, but that he had read of such an occurrence.'"

Now, Mr. Editor, that is evidently a settler for me, for it apparently contradicts my assertion made in my last article, that, "in the course of my reading I have never seen the assertion demonstrated." But unfortunately you lean upon a broken reed when you appeal to your memory in this matter. If you will refresh your memory by referring to any one of the gentlemen who were present, or to all of the gentlemen who were present, and most listened with intense interest to my testimony, viz., the judge, the stenographer, and the counsel for the defense and the State, you will learn that you are in error; altogether, and that the question was not asked at all in the form in which you claim, and that I neither said that I had read of the case, nor that the imbiber was killed. When asked if I had ever known strychnine to be found in ordinary whiskey, (or some question of similar purport,) I replied: "Not of my own knowledge, but I have asked the judge whether it would be competent for me to speak of a case of which I had heard—in which a man had been poisoned by whiskey in which strychnine was found by analysis. The judge declined to receive this hearsay as evidence, because it was not recorded in a book which is accepted as medical authority. And very properly, too, because neither my informant nor I could say whether or not the strychnine had been introduced for criminal purposes in this case. I will here state that I do not make this correction of your error of memory from my own recollection alone, but from the recollection of the counsel for State and defense. With reference to the latter part of your editorial, I acknowledge that "five original analyses are rather a narrow basis for an opinion."

If my testimony was to be rendered "utterly nugatory" by this "well known fact," strychnine is often, though not always, to be discovered in whiskey. I felt called upon to demonstrate that this is not a "well known fact," at all which I did by showing that the highest authorities on medical jurisprudence, and others who ought and would surely be aware of it, are entirely innocent of any knowledge of it, etc., and that I failed to find it in all the specimens of common whiskey accessible to me.

When, however, you, Mr. Editor, who by virtue of your vast and varied learning and the fact that you have so often delighted your readers with your able and pleasing articles on astronomical and other philosophical subjects, enjoy a well earned reputation as a scientist, make the assertion that it is "a well known fact" that strychnine is often, though not always, discoverable in ordinary whiskey, and as foreman of a jury introduced this "well known fact" as an element in an important trial for murder, the *onus probandi* rests upon you, my dear sir. It is not exactly logical to ask me to "broadly deny," and "nail to the counter this popular fallacy," etc. Nevertheless, Mr. Editor, whenever you demonstrate that the presence of strychnine in whiskey is really esteemed a well known fact, and that the search after this poison would not be a Quixotic enterprise, then it will be time enough, and it will be my pleasure to undertake to do, to terminate this question in such unequivocal manner that it will be available for future use by medical jurists.

In conclusion, Mr. Editor, I desire to offer you my thanks for the courtesy and kind manner with which you have treated my communication, and to express the sincere hope that nothing I have said can be construed, ever by the highest stretch of sensitiveness, as disrespectful or otherwise improper toward you, for whose learning, ability and conscientious pursuit of duty this whole communication entertains the highest regard. Rather than say anything disrespectful or unkind towards you, sir, would I prefer to stand unvisited and.

Very Truly Yours,
S. BARUCH, M. D.

CAROLINA FERTILIZER.
The Bradley's Patent Super-Phosphate.
AND
The Palmello Soluble Acid Phosphate.
Have been used by planters of the South for ten years with successful results. They contain no poisonous materials, and their continued use. The standard of their excellence is guaranteed, and their results prove beyond question that every planter who gives his own interests should PURCHASE NO OTHER.
JANUARY 30/91

SARDY'S FERTILIZERS
Best & Cheapest in Use.
Manufactured by the Ashpole Mining and Manufacturing Company—Factories at CHARLESTON, S. C., and Dallas North Atlantic Wharf.
SARDY'S AMMONIATED SOLUBLE PACIFIC GUANO.
PHOSPHO-PERUVIAN GUANO & DISSOLVED BONE PHOSPHATE.
These well-known Standard Fertilizers, after 10 years practical test throughout the South, have proved to be the most profitable in use for cotton, corn, and all other crops, particularly adapted to the Southern climate and soil, the crops in many instances being MORE THAN DOUBLED BY THEIR USE. While these fertilizers are being prepared from the "best" ingredients, and of even higher grade than ever before, THE PRICES HAVE BEEN MATERIALLY REDUCED FOR THE PRESENT SEASON, thereby placing them within the reach of every planter, and none can afford to do without them.
