THE ROTATION OF THE MARTH RENDERED VISIBLE. - The experiment now being exhibited in Paris, by which the diurnal rotation of the earth is rendered palpable to the senses, is one of the most remarkable of the modern verifications of theory. Although the demonstration by which the rotation of the earth has been established be such as to carry a conviction to the minds of all who are capable of comprehending it, to which nothing can be imagined to add either force or clearness, nevertheless even the natural philosopher himself cannot regard the present experiment without feelings of profound interest and satisfaction, and to the great mass, to whom the complicated physical phenomena by which the ro tation of the earth has been established are incomprehensible, this exp riment is invaluable. At the centre of the dome of the Pautheon a fine wire is attached, from which a sphere of metal, four or five inches in diameter, is sus pended so as to hang near the floor of the building. This apparatus is put in vibration after the manner of a pendulum. Under, and concentrated with it, is placed a circular table, some twenty feet in diameter, the circumference of which is divided into degrees, minutes, &c., and the divisions numbered. Now, it can be shown by the most elementary principles of me chanics, that, supposing the earth to have the diurnal motion upon its axis which is imputed to it, and which explains the phenomena of cay and night, &c., the plane in which this pendulum vibrates will not be effected by this diurnal motion, but will maintain strictly the same direction during twenty four hours. In this interval. however, the table over which the pendulum is suspended will continually change its position in virtue of the diurnal motion, so as to make a complete revolution round its centre. Since, then, the table thus revolves

and the pendulum which vibrates over it does not revolve, the consequence is that a line traced upon the table by point projecting from the bottom of the ball will change its direction relatively to the table from minute to minute and and from hour to hour, so that if such point were a pencil and that paper were spread upon the table, the course formed by this pencil during twenty-four hours would form a sys tem of lines radiating from the centre of the tables, and the two lines formed after the interval of one hour would always form an angle with each other of an angle with each other of 15 deg. being the twenty-fourth part of the circumference. Now this is rendered actually visible to the crowds which daily flock to the Phantleon to witness this remarkable experiment. The practised eye of a correct observer. especially if aided by a proper optical instrument, may actually see the motion which the table has, in common with the earth, under the pendulum, between two successive vilgrations. It

is in feet, upper at that the ball, or rather the point attached to the bottom of the ball, does not retain precisely to the same point of the circumference of the tables after two successive vibrations. This is rendered visible the motion which the table has in common with the earth. It is true that, correctly speaking, the table does not turn round its own centre, for although the table be turned, in common with the surface of the earth. round the earth's axis, the point of suspension of the pendulum is turned also in the same time round the same axis, being continually maintained vertical above the centre of the tabl The plane in which the pendulum vibrates does not, however, partake of the motion, and, consequently, has the appearance of revolving once in twenty four hours over the table, while, in reality, it is the table which revolves once in twenty four hours under it.

EDUCATION OF IDIOTS. - At Barre. Worcester Co., Massachusetts, there is an institution conducted by a physician Dr. Wilbur, for the physical and mental education of idiots, imbecdes, and children of retarded developments of mind. It was the first of the kind taken in the United States Its method is that which has been in operation in European institutions for the same end. Simple gymnastic exercises give strength to the muscular system, to the nerves, and to the general health. Exercises in imitation correct faults in speech, carriage and manners. Habits of attentive sight and hearing are generated by what Dr. Wilbur calls sensorial gymnastics. As the improvement progresses it is an aim to cultivate the memory and store it with facts and thoughts of future use; and next, to discipline the mind to compare and judge.

The pupils sit at the same table with the principal, and are constantly under the eye of some member of the faculty. in their hours of recreation as well as of study. The organization is therefore a family one, and thus a special attention onn be given to manners as in a private

Dr. Wilbur has been engaged in this pioneer work nearly three years. He has had fifteen chi dren under his care. soar away with their usual velocity. In a late report of his labors he recordresults which bear comparison with those that have been attained in Europe. The moscular training of his popils has had a manifest favorable influence, they are more erect, walk better are more dexterous, and have more steadiness in the nerves. The perceptive faculties have been awakened and cultivated; the faculty of imitation made active; and the power of attention a reader of the joke, may seem too good so strengthened in every case, as to indicate there is a capacity for higher mental operations. The pupils are less passionate and perverse; more mild

troublesome, and disgusting consequences of neglected idiocy, and in their stead are growing habits of deceney, order, employment, quietness

and decorum. Since the commencement of this private enterprize an experimental school for the education of ten idiots has been put in operation by the Legislature of Massachusetts, hat body has appropriated twenty five hundred dollars annually, for the term of three years, for the purpose of training and teaching. This important civil and scientific experiment has been committed to the genius of Dr. Howe, so well reported of every where as a born teacher of the blind and of the blind mute, Laura Bridgman .- Balt.

THE PYRAMIDS OF EGYPT. - The number of these now standing is between forty and fifty. They are all in what is called Middle Egypt, and are divided into five groups. The most remarkable of these groups, as containing the three largest pyramids, is in the vicinity of Ghizeh, not far Cairo. The loftiest of this group is that of Cheops, so called from the name of the prince by whom it is supposed to have been built. It covers a space of more than thirteen agres of ground. Its perpendicular height is 480 feet, thus making it the highest work of man in the known world. Supposing this pyramid to be entirely solid, which, bowever, is not, as has of late years been discovered, its cubic contents would afford material sufficient for building the fronts of a row of houses, fifty feet in height and one yard in thickness, whose length would be thirty-four miles! According to Heredius, 100,000 men were employed for twenty years, in its construction. The remaining pyramids are of smaller dimensions; but they are mostly .ll, notwithstanding, of immense magnitude. They are not all of stone, some of them being brick. The purpose for which these remarkable edific es were constructed is involved in mys tery; even in remotest antiquity their origin was a matter of debate, and nothing certain was known with respecto them or their founders. Most probably they were at once a species of tombs and temples; and may be considered as monuments of the religion and piety, as well as of the power of the

A Neglected Scratch .- An Indiana clergyman lately told a story about a man with whom he boarded when a college boy. The man was at his work one frosty morning, and happened tiget a slight scratch on the back of his hand. A single minute's attention to it would have caused it to heal in a day or two. It was neglected. A slight inflammation appeared, which a simple poultice would have reduced, but it was neglected. The whole hand became inflamed, and should have had the best medical attention, but it was neglected. The arm and should rand

p vsterous were son in attendance to consult upon the case. The question Together with Rope. Twine, &c d cided to be too late! The disease bid gained a mertal held, and no We have the most complete assortment of human skill could arrest it. A vicious habit-an indulged little sin-a that has ever been brought to this market, toa gleeted duty-how easily are they taken care of, if we are in season with them; but how stubborn and ruinous they become, if they are let alone! SPONGE TRADE OF KEY WEST.—The

sponge trade is creating quite a sensation in our midst. A large number of our chizens are engaged in procuring it, and are reaping a handsome reward for their labor. The sponge is cured and brought into market, and sold to our merchants for N. w York consump tion, where they are manufacturing a beautiful article of cloth from it. The discovery was only made some six months ago that it was valuable for such a purpose, and now the article commands in this market, from ten to twelve cents per pennel, and a first rate article, well cored and attended to, will bring even more. There is always a demand for it, and it would not surprise us to see it, at no distant day, one of the principal commolities of our section. - Key West Gazette.

## A Remarkable Fact.

The sea birds, the pelfin, guillemot, and razor bird, cannot fly over the land at all, although they rise from the surface of the sea with equal facility, mount to an indefinite hight, fly with an amazing rapidity so long as the sea is immediately beneath them, but no somer do they fly above dry ground than they drop as if shot. During a strong wind from the sea, it not unfrequently happens that these birds in mounting higher than the edge of the cliff, are suddenly blown a few yards over the land when they fall, and can regain their natural element only by crawling to the edge of the precipice, when new vigor seems to inspire them, and at once

#### From the State Rights Republican. The Wit of Auctioneers. The New-York Courier of Empirer,

oticing the opening of Mr. Cooley's Spring Book Trade Sale in that city, speaks very highly of the patience and the wit of Mi. Kerse, the auctioneer on the occasion. His marvellous readines of reply, says that Journal, is becoming proverhial, and there was an instance at this sale which, to

not to have been prepared beforehind; but the circumstances rendered that impossible. A gentle man who had been the Co., "the tail," as it is called, of a well-known bookselling house, had become a partner in the and affectionate, more tractable, more house of Moral & Smith Some one loo! - Agent for this paper, and is authorized to tual self central. There has been gre in. of the former house were expected to be, same.

said; "Where is-! I don't see h.m! On, yonder, he is," replied John Keese. pointing out his books. "He now points Morall, where he formerly adorned a tail.' This reminds us of a somewhat similar incident, of which we were a witness, some

years since, in the old country, whilst an indergraduate of the University of Oxford During term time, an auctioneer, by the name of Wise, was in the habit of holding weekly a sale of books, &... at which of course the undergrads formed the majority of the audience, a though frequently some of the Dons were present, for the double purpose of picking up some cheap work and keeping their weather-eye open as to the style in which Mr. Wise conducted his business, as no trade can be carried on within the precencts of the University un-

less with the permission of the Faculty. On the occasion we allude to a seemingly valuable parcel of books had been put up byMr. Wise, and owing to the persuasive loquence he (was master of, had received biddings far above the price they could have been obtained of any respectable bookseller. The freshmen, however, in ignorance of the possession of this, were eagerly competing with each other for the possession of them, when old Dr. Bliss, the professor of Poetry i . the University, abruptly proclaimed the fact. Whereupon Wise, nothing abashed, roared forth in stentorian terms from his rostrum, pointing sign ficantly at the unfortunate interrupter

of the proceedings,
"When ignorance is bliss,
"Tis folly to be wise."

It is needless to say that this happy quo-ation was a decided hit. The audience were convulsed with laughter, and the Professor, convinced that he was no match for the witty auctioneer, made tracks, and ever darkened the premises again with his

etter to Dr. Jickson, Jan. 9, 1850, said—
"My wife aid myself have received more benefit from your nedicine than any other we have
ever taken for the Dyperpaia and Liver disease."
"The Tental Legion." published at Woodstock, Va., January 10, 1859, said—
"A GREAT MEDICINE."

"We have uniformly refrained from recommending to the phickary of the various Patent
Medicines of the day, unless thoroughly convinced of their vilue. Among these we consider worthy of notice is the German Bitters, invented by Dr. Instance in particular, in Wichthe superior virtues of this
medicine have been tested, has fallen under our
observation. Daring the last summer, a sen of
Mr. Adraman Phabeled with Liver complaint,
and after tryingin vain various remedies, he
purchased a bottle of the Bitters, and after using it, was so much refleved of his distressing ng it, was so much refleved of his distremalady, that he presented another bottle, and is restored entirely b health."

READ FURTHER A FEW FACTS

JUDGE M. M. 10AH, a gentleman with great cientific and livery attainments, said in his New YORK WEKLY MESSENGER." Janua-

ry 6. 1850.

"Ga. Hoofino's German Bitters.—
Here is a preparaton which the leading presses in the Union appar to be manimous in recommending, and, he reason is obvious. It is made after a presciption furnished by one of the most celebrated pysicians of modern times, the batch of the control of the leading of the leadin the late Dr. Chritopher Wilhelm Hoofland, Professor to the inversity of Jena, Private Physician to the ling of Prussia, and one of the greatest medical writers. Germany has ever produced. He waremphatically the enemy of humbag, and therfore a medicine of which he was the inventor ad endorser may be dently relied on. He specially recommended dently relied on. He specially recommended it in Liver Compaint, Dyspepsia, Debility, Vertigo, Acidity othe Stomach, Constipation, and all complaints arising from a disordered condition of the semach, the liver and the in-testines. Nine Valadelphia papers express their conviction of its excellence, and several of the editors speck of its effects from their own individual experience. Under these circum-stances, we feel surranted, not only in calling the attention of ou readers to the present pro-prietor's (Dr. C. 4, Jackson's) preparation, but in recommending the article to all afflict-ed."

The "PHILADEL HIA SATURDAY GAZETTE,"
the best family awspaper published in the United States, the sliter says of DR. HOOFLANDS GERMAN BITTERS. "It is seldom that we recommend what are termed Patent Medicines to the confidence and patronage of our raders; and, therefore, when we recommend D. Hoofland's German Bitters, we wish it to be stringtly understood that we we wish it to be definedly understood that we are not speaking of the nostrums of the day, that are noised about tr a brief period and then forgotten after they lave done their guilty race of mischief, but of r medicine long established, universally prized and which has met the hearty approval of the Faculty itself."

Evidence upon syndence has been received (like the foregoing from all sections of the Union, the last three years, and the strongest testimony in its favor, is, that there is more of it used in the practice of the regular Physicians of Philadelphia than all other nostrums combined

Philadelphia than all other nestrons combined, a fact that can easily be established, and fully proving that a sciuntic preparation will meet with their quiet approval when presented even in this form.

That this medic ne will cure Liver Complaint.

and Dyspepsia, noone can doubt, after using it as directed. It are specifically upon the stomas directed. If need specifically upon the stom-ach and liver—if is preferable to calonic in all bilious discusse—the effect is immediate. They can be noministered to FEMALE OF INFANT with safety and resuble benefit, at any time.

BEWARE OF COUNTERFEITS. This medicine has attained that high charac-

ter which is necessary for all medicines to at tain to induce connecters to put forth a spurious article at the sk of the lives of those who are innocently decreed.

is used with the most perfect and certain success in all GENERAL DEBILITY, GENERAL DEBILITY,
Strengthening the weakened body, giving tone to the various organ, and invigorating the entire system. Ale in FITS, CRAMP, PARALYSIS and FALSY, DYSPEP SIA or INDIGESTION, RHEUMATISM, ACUTE and CHRONIC, GOUT, EFILEFSY, LUMBAGO, DEAF NESS, NERVOUS TREMORS, PALFITATION OF THE HEART, APOPLEXY, NEURALGIA, FAINS in the SIDE and CHEST, LIVER COMPLAINT, SPINAL COMPLAINT, and CURVATURE of the SPIRE, HIP COMPLAINT, and CURVATURE of the SPIRE, HIP COMPLAINT, DISEASES of the KIDNEYS, DEFL CHENCY OF NERVOUS and PHYSICAL ENERGY; and all NERVOUS DISEASES, which complaints give from one simple cause—namely,

A Derangement of the Nervous System.

672- In NERVOUS COMPLAINTS, Drugs and Medi-

63- In NERVOUS COMPLAINTS, Drugs and Medicines increase the disease, for they weaken the vital energies of the aiready prostrated system; while, under the strengthening, life-giving, vitalizing influence of, Galvaniam, as applied by this beautiful and wonderful discovery, the exhausted patient and weakened sufferer is restored to former health, strength, elasticity and vigor.

The great peculiarity and excellence of Dr. Christie's Galvanio Curatives, consists in the fact that they arrest and cure disease by estimated application, in place of the usual made of drugging, and physicking the patient, till exhausted Nature sinks hopelessly under the indiction.

They strengthen the whole system, equalize the circu-lation of the blood, promote the secretions, and never de-the stightest injury under any circumstances. Since their introduction in the United States, only three years since, many than 60,000 Persons including all ages, classes and conditions, among which were a large number of ladies, who are peculiarly subject to Nervous Complaints, have been ENTIRELY AND PERMANENTLY OURED,

when all hope of relief had been given up, and every thing ease ocen tried in vain! To illustrate the use of the GALVANIC BELT, To illustrate the use of the GALVANIC BELT, suppose the case of a person afflicted with that bane of tivilization, DYSFEYSIA, or any other Chronic or Nerv as Disorder. In ordinary cases, stimulants are taken, which, by their action on the nerves and muscles of the stomach, afford temporary relief, but which leave the patient in a lower state, and with injured faculties, after the action thus excited has ceased. Now compare this with the effect resulting from the application of the GALVANIC BELT. Take a Dyspeptic sufferer, even in the worst symptoms of an attack, and simply tie the Belt around the Body, using the Magnetic Fluid as directed. In a short period the invensible perspiration will act on the positive clement of the Belt, thereby causing a Galvanic circulation which will pass on to the negative, and thence back again to the positive, thus keeping up a continuous Galvanic circulation throughout the system. Thus the most severe cases of DYSPETSIA are PEP MANENTLY CURED. A FEW DAYS IS AMPLY SUFFICIENT TO ERADICATE THE DISEASE OF YEARS.

AN EXTRAORDINARY CASE. which conclusively proves that

"Truth is stranger than Fiction." CURE OF Rheumatism, Bronchitis and Dyspepsis. REV. DR. LANDIS, A CLERGYMAN

of New Jersey, of distinguished attainments and exalted reputation :-Sidenty, New Jersey, July 12, 1848.

Dr. A. H. Christiff—Dear Sir: You wish to know of me what has been the result in my own case, of the application of THE GALVANIO BELT AND NECK LACE. My teply is as follows:

For about the state years I had been suffering from Dyspepsia. Every year the symptoms became worse, nor could I obtain permanent relief from any course of medical treatment whatever. About fourteen years since, in consequence of frequent exposure to the weather, in the discharge of my pustoral duties. I became subject to a severe Chronic Rhemmatism, which for year after year, caused me indescribable anguish. Farther: in the winter of '15 and '16, in consequence of proching a great deal in my own and various other churches in this region, I was attacked by the Bronchitist, which soon became so, severe as to require an immediate suspension of my pastoral labors. My nervous system was nose theroughly protrated, and as my Bronchitis became worse, so also did my Dyspepsia and Rheumatic affection—thus evincing that these disorders were connected with cach other through the medium of the Nervous System. In the whole pharmacepaia there seemed to be no remedial agent which could reach and recuperate my Nervous System; every thing that I had tried for this purpose had completely failed. At last I was led by my friends to examine your inventions, and (though with no very sanguine hopes of their efficiency,) I determined to try the effect of the application of the GALVANIC BELT AND NECKLACE, with the MAGNETIC FLUID. This was in June, 1846. To my chear attended to try the effect of the application of the GALVANIC BELT AND NECKLACE, with the MAGNETIC FLUID. This was in June, 1846. To my chear attended to try the effect of the application of the GALVANIC BELT AND NECKLACE, with the MAGNETIC FLUID. This was in June, 1846. To my chear attended to try the effect of the application of the GALVANIC BELT AND NECKLACE, with the MAGNETIC FLUID This was in June, 1846. To my chear attended to the BELT and FLUID to many, who hav Sibary, New Jersey, July 12, 1848. DR. A. H. CHEISTI

DR. CHRISTIE'S GALVANIC NECKLACE
Is used for all complaints affecting the Throat or Head, such as Bronchitis, Inflammation of the Throat, Nervous and Sick Headache, Dizziness of the Head, Neuralgis in the Face, Burzing or Roaring in the Ears, Dealness, which is generally Nervous, and that distressing complaint, oalled Tie Deloreux.
