Pepsin is the chief element, or Great Pigesting Principle of the Gastric Juice—the Solvent of the Food, the Purifying, Preserving, and Stimulating Agent of the Stomach and Intestines. It is extracted from the Digestive Stomach of the Ox, thus forming an artificial Digestive Fluit, precisely like the natural Gastric Juice in its Chemical powers, and furnishing a Complete and Perfect Substitute for it. By the aid of this preparation, the pains and evils of and of this preparation, the pains and evils of Indigestion and Dyspeptia are removed, just as they would be by a healthy Stemach. List do ing wonders for Dyspepties, curing cases of De-bility, Emaciation, Nervous Decline, and Dyspeptic Constantion, supposed to be on the verge of the grave. The Scientific Evidence upon which it is based, is in the highest degree Curi-

SCIENTIFIC EVIDENCE!

Buton Liebig in his celebrated work on Animal Chemistry, says: "An artificial Digestive Finid, madegous to the Gastric Juice, may be readily prepared from the mucous membrane of the stomach of the Calif, in which various articles of finel as ment and eags, will be softened. the stomach of the Calf, in which various articles of food, as meat and eggs, will be softened, clanged and digested, just in the same manner as they would be in the human stomach."

Dr. Combe, in his valuable writings on the "Physiology of Digestion," observes that "a diminution of the due quantity of the Gastrie Juice is a prominent and all-prevailing cause of Dyspepsia;" and he states that "a distinguished professor of incdicine in London, who was severely afflicted with this complaint, finding every thing else to fail, had recourse to the Gastrie Juice, obtained from the stomachs of Gastric Juice, obtained from the stor

Gastric Juice, obtained from the stomacha of fiving animals, which proved completely successfully."

Professor Dunglisen, of the Jefferson College Philadelphia, in his great work on Human Physiology, devotes more than fifty pages to an examination of this subject. His experiments with Dr. Beaumont, on the Gastric Juice obtained from the living human stomach, and from animals, are well known. "In cases." he says, "digestion occurred as perfectly in the artificial as in the natural digestions."

Dr. John W. Draper, Professor of Chemistry, in the Medical College of the University of New York, in his "Text Book of Chemistry," page 356, says,: "It has been a question whether artificial digestion could be performed—but it is now universally admitted that it may be."

ther artificial digestion could be performed—but it is now universally admitted that it may be."

Dr. Carpenter's standard work on Physiology, which is in the library of every physician, and is used as a Text Book in all the Colleges, is full of evidence similar to the above, respecting the remarkable Digestive power of Pepsin, and the fact that it may be readily reparated from the stomach of the calf or Ox, and used for externacins in Artificial Digestion, or as a for experiments in Artificial Digestion, or as a

remedy for dweases of the Stomach, and deficient secretion of Gastrie Juice.

OFFICE OF PHIL'A. & READING R. R. Co.,
No 73 S.-Front-st. cor. Willing and Alley.

J. S. Silver, Esq.:—Dear Sir.—We have used your "Plastic Paints" for more than a year, and for painting bridges, depots, &c. &c., we have found it equal to any paint we have used; in fact we now give it a preferance over all others we have tried for such purposes.

Yours respectfully.

We have tried for such purposes.
Yours respectfully,
JOHN TUCKER, President.
The above is but one of the many certificates we have received from gentlemen of our city, who have used Silver's Mineral Paints.
COLORS.—We have seven different colors, viz: three browns, two chocolates, black and yellow, and by combination, make every variety and shade of color.
iRON.—To iron, they furnish a perfect protection against tust, for they contain no metal.

iRON.—To iron, they furnish a perfect protection against rust, for they contain no metal; which, like white lead, acts destructively on the iron. In fact, this paint makes iron doubly valuable for building purposes.

BRICK WORK.—They give to house-walls a much heavier coating than any other paints, and if standing is required, nothing holds so firmly or finishes so well with it.

OLD ROOFS.—Give us a roof never so ord and leaky, Silver's Mineral Paints will make it cheaply new, and more enduring than ever it was.

was.
SIHPS using this extraordinary mineral as we prepare it for them, will be proof against the action of hot suns, worms, and salt water.

DIRECTIONS.—Use Linseed Oil, mix as DIRECTIONS.—Use Linseed Gil, mix as thick as you can, and use as other paints.

These pains need but little dryer, and for priming and second coatings in all household works, they will be found far cheaper and more durable than lead.
