How to Tell Genuine Cut Glass
Cut Glass like all other articles is sold in many grades. And perhaps there are more imitations in cut glass than most any other thing handled by jewelers today.
The first thing you want to take into consideration when you are thinking of purchasing a piece of cut glass is to go to the place where you know without a doubt that they themselves know that the article they are selling you is genuine.
And if the piece is a genuine handshaped and blown blank the inside surface will be perfectly smooth to the touch when you run your fingers lightly over the inside surface. And if you can feel any unevenness or waves like you know without a doubt that it is a pressed piece of glass. And the edges of genuine cut glass have a clear crystal appearance, while those of pressed glass a cloudy appearance which will be more and more apparent as it is exposed to light and change of temperature. But the genuine will hold its crystal like appearance no matter how it is exposed to light or any temperature. If you intend to purchase a piece of cut glass we will be pleased for you to drop in and let us explain and show you the many differences in glass ware so you can always know yourself when you are getting a good grade of Cut Glass.
