

Cures Biliousness, Sick Headache, Sour Stomach, Torpid Liver and Chronic Constipation. Pleasant to take

ORINDO Laxative Fruit Syrup W. E. BROWN & CO.

Cleanses the system thoroughly and clears sallow complexions of pimples and blotches. It is guaranteed

Notwithstanding the large quantities of beans which are produced in the United States, there were imported last year more than 2,500,000 bushels, valued at over \$4,000,000.

The manufacturers of almost all brands of stock foods realize that stock does not, as a rule, get all the salt they need; hence put in a generous supply of this much relished condiment.

On loose, rolling soils alfalfa is preferable to an annual legume like crimson clover or cowpeas, because when once established the soil needs no plowing and but slight harrowing for several years.

The newly set wood lot will do best if given much the same cultivation as other tilled crops, for the law of rapid growth for trees and plant life is the same—namely, adequate circulation of the air and moisture in the soil.

During the last fiscal year the importation of wool into the United States amounted to 265,500,000 pounds, valued at \$45,000,000. For the last decade the consumption of wool totaled 4,750,000,000 pounds, of which 28 per cent, valued at \$213,000,000, was imported.

If the boy couldn't have both, but could choose the one or the other, he would be better equipped for life with a well endowed self respect and moral backbone than by having a percentage of owned with a fat bank account only. The possession of the former will enable him to keep his head level in many times of stress, while the latter would more likely prove a pitfall and a snare than of any positive benefit.

It is generally conceded by experienced fruit men that heavy pruning during the dormant period tends to produce heavy wood growth the season following. This type of pruning is therefore desirable for young trees where growth of wood and the building of a good frame are the chief aims.

Where it is not desired to grow an intensive crop like strawberries in the young orchard beans or corn makes an excellent substitute where soil and climatic conditions are favorable. The tillage of these crops gives the soil that stirring which is most beneficial for the growing trees, while neither pulls largely on the soil fertility. In sections where the summer sun is very hot and a shade is needed for the trees corn would be preferable to beans, while the presence of the growing corn would lessen the damage to the young trees from grasshoppers.

Every farmstead located in a section where winters are cold and winds blow ought to have its shelter belt of coniferous trees—spruces, pines or firs. The strip devoted to such windbreak ought to be located at a sufficient distance from the house and farm buildings to give room for feed lots, gardens, etc. This strip should be put in mellow condition and given frequent cultivation after the young trees are set. It is well to select for the shelter belt varieties which have done well and made thrifty growth on other farms in the vicinity, or, if there be none of these, varieties which are recommended by the nearest reliable nurseryman. Only those trees should be bought which are guaranteed to have good roots and to grow when properly cared for. Trees that have been transplanted several times in the nursery are far preferable to those which have not been.

While the statistics of the world's supply of live stock are incomplete, the latest estimates are interesting. Sheep are the most numerous of the domestic animals, and their total number is placed at 580,000,000. In this industry Australia ranks first with 85,000,000 head, Argentina next with 67,000,000, and the United States third with 57,000,000 head. The world's supply of cattle is given as 430,000,000 head, and in this line British India leads with 91,000,000 head, including buffaloes and buffalo calves. The United States stands second with 70,000,000 head and Russia third with 37,000,000. In the raising of hogs the United States is far and away in the lead, being credited with 30,000,000, or more than a third of the world supply. Germany comes second with 22,000,000 head, while Europe has about 11,000,000. The total number of horses is placed at 95,000,000 head, and the United States and European Russia rank about even with between 20,000,000 and 25,000,000 each. This country is credited with more than half of the 7,500,000 mules. Asiatic Turkey raises most asses, British India leads in goats, Asiatic Russia has most camels, while Russia leads in the number of reindeer.

Worse Than Bullets.

Bullets have often caused less suffering to soldiers than the eczema I. W. Harriman, Burlington, Me., got in the army, and suffered with, forty years. "But Backlen's Arnica Salve cured me when all else failed," he writes. "Great healer for Sores, Ulcers, Boils, Burns, Cuts, Wounds, Bruises and Piles. 25c at all druggists."

Let the Lights Go Out.

It is a lonely little fishing bay in a corner of the Cornish coast, but it boasts a lighthouse on its queer old quay and also a story concerning it and its ancient keeper. The light was noted to be a little erratic, and so one day to the ancient keeper thereof came an officer of the coast guard. "What is this I hear?" he demanded. "Is it true that your light is never alight after midnight?" "That's right, my assent," answered the ancient one equably. "Tis a fact and well known that all the boats be in and safe afore 12 midnight, so I be savin' the lie!" And he looked smiling for approbation.—St. James' Gazette.

A becoming sense of the eternal fitness of things would suggest the propriety of having at least a couple of months elapse between the publication of a card of thanks and action on the part of the heirs at law to take steps to secure what they consider an equitable partition of the estate of the deceased relative.

Hen manure is too concentrated a fertilizer to be put on the land liberally, as is done with other manures. It should be mixed with dust or litter while accumulating, and even then one should spread the stuff sparingly. We have known of mature apple trees being knocked out by too much kindness in the application of this fertilizer.

Treating seed corn with coal tar by stirring a small quantity of it in a peck of seed at a time so that each kernel is smeared with a little of the tar is said to keep the corn after it is planted. If the kernels are inclined to stick together more corn should be worked in and possibly a little flour, which will tend to keep the kernels apart.

The sooner soil is harrowed after being plowed the more completely will it retain the moisture at and near the surface, for the blanket of fine, mellow earth thus made checks a rapid evaporation of the moisture. Since this is so a delaying of the harrowing will serve to more quickly dry a soil that contains more moisture than is required for the proper germination of the seed which is to be placed therein. In sections of the west where moisture is at a premium strict attention is paid this fact of moisture conservation.

If the truth were known it would probably come to light that the increased cost of living is due to a substantial increase in freight and express rates as well as to a perceptible inflation of the circulating medium and scarcity of some staple food supplies. This advance in transportation rates has been very quietly made, but the increase has been considerable and the middleman and distributor in order to come out whole has had to add this advance to the prices he had been previously asking for his goods, which were already high.

There is nothing calculated to check milk flow in a dairy cow more effectively than being chased around a yard by a cursing, loud mouthed man or boy and being ever and anon pounded over head or rump with club or milk stool. Not long ago we saw a pretty likely looking heifer put through this kind of mill by a couple of little healthens, whose treatment would be sufficient to cause a cow to give skimmilk, sour milk or no milk at all. It may suffice to say that the father of these boys wasn't in the dairy business for profit or he would have got busy on the boys with a big slit.

Of all shortsighted initial economies there is none worse than the buying of runty and unthrifty fruit trees just because they can be got cheap, and this is true whether one is setting an orchard for himself or expects to turn it over to some customer at a bearing age. It is the start a tree gets, as in the case of a calf or pig, during the first three years that largely determines not only its later beauty, but utility as a horticultural thing, and hence every reasonable precaution should be taken to see that the choice of the young trees as well as the care given should be of the best.

A fellow may not suffer anything more than physical discomfort if he orders his undershirt and prunes from a distant mail order house, but he had better pass the practice up when it comes to grass seed and order from a home man who he can bat with a stuffed club if the seed is not pure and as represented. Not as yet is there in force an adequate federal pure seed law; hence a fellow has no redress if he orders a cat from a firm outside of his own state and gets worthless or even pernicious grass seed. A number of states have effective pure seed laws, and where seller and buyer reside in such states the latter's rights are amply safeguarded.

While there is a big discrepancy between the prices which it was claimed could be got for ginseng in the craze which swept over the country four or five years ago and those which are quoted today, the returns are nevertheless sufficient to give a good interest return on the money invested, provided one has the patience to bide his time for results. The present prices of ginseng range from \$4.50 to \$6.75 per pound for the dried roots, the higher prices being received for the wild product, which finds a congenial home in moist, moldy wood lots where the shade is sufficiently dense to keep blue grass from getting a foothold. The roots should not be gathered before they are two years old, while much larger and a better quality of roots are secured if they are allowed to grow a longer period. In the arid cultivation of ginseng the conditions of moisture and shade referred to as existing in a native wood lot are reproduced as nearly as possible, the beds being shaded by the erection of rat roofs and abundant moisture being supplied if the rainfall should not be sufficient.

Baths in Finland. One of the greatest trials a visitor in Finland has to endure is a Finnish bath. The method of procedure is unique. Dressed of outer clothing and attired in a light and airy cotton garment, you are slung in a sort of hammock composed of cord above a large receptacle like the boilers in public laundries. This is almost filled with cold water, into which at the right moment is flung a large red-hot brick or piece of iron, which of course causes an overwhelming rush of steam to ascend and almost choke you. Then when that process has gone on sufficiently long you are slung out of your hammock, immersed in cold water, and resume your drab treatment until you resume your drab, sad and wiser than before your novel experience.

Effect of the Sun on Monuments. The peculiarly of a monument is visibly affected by the rays of the sun. On every sunny day a tall monument has a regular swing leading away from the sun. This phenomenon is due to the greater expansion of the side of a monument placed inside, say, Nelson's column, in Trafalgar square, and has been found to describe on every clear day an ellipse of nearly half an inch in diameter.—English Mechanic.

Black Rot of Sweet Potato.

One of the most widespread and most destructive diseases in this State at present is the Black Rot of Sweet Potato. This disease occurs quite commonly and does considerable damage on potatoes both in the field and in storage. The rot is caused by a parasitic fungus which, under certain conditions, is able to pass from one plant to another and thus spread the disease. The trouble first appears as brown or black patches or mottled, discolored areas on the surface of the potatoes. Quite frequently these discolored areas are observed in potatoes when they are dug, but at this stage the disease only seems to penetrate the skin and is apparently doing no serious harm. Later the rot extends into the potato and causes the affected area to turn black and to emit the odor which is so characteristic of rotten potatoes. When such potatoes are stored in warm, moist places, the rot producing fungus becomes especially active and by means of its spores, which are produced in small black pustules on the surface of the diseased areas, spreads rapidly from one potato to another. Under such conditions the disease is also spread by the filaments of the fungus growing from the affected area to the healthy potatoes. In this way the rot might spread to every potato in a bank.

If slightly diseased potatoes are stored in a place where conditions are unfavorable to the development of the rot, they frequently remain partly rotted until spring. The real danger of spreading the disease from one field to another comes in bedding such potatoes. Slightly diseased potatoes seem to sprout as readily as healthy ones, and the slips from such potatoes are diseased. The disease transferred with such slips to the field remains on the plant and attacks the potatoes when they develop. The fungus which causes black rot also enters the soil from year to year and where potatoes are planted every year on the same land, the disease constantly gets worse.

To prevent black rot then we must: First, secure disease free seed for planting; second, avoid planting potatoes on the same land for two years in succession.

Quite frequently it is impossible to secure potatoes for bedding which are entirely free from disease. In such cases it is well to use vines instead of slips, for the fungus which causes the disease remains in the vicinity of the roots of the plants. It does not live in the vines and leaves, so vines grown from diseased potatoes, if planted on land which is free from disease, will produce sound potatoes.

Now, as I have said, black rot occurs on the majority of the farms in this state, and is responsible either directly or indirectly for the loss of thousands of dollars worth of potatoes annually. It is well for every farmer to look out for it and guard against its spread. If you have already bedded your potatoes and are not sure that they are free from disease, plant as much of your crop as you can from vines and on land free from disease. When you gather these potatoes, bank separately the ones grown from the vines and the ones grown from the slips and note the keeping qualities of each.

Potatoes should not be banked for two years in succession in the same place, because the fungi which cause these rots will live over in the old banks and attack the new potatoes as soon as they are banked. Where potato houses or cellars are used for storing, they should be cleaned out and disinfected before the new crop is put in. This can be done by cleaning them out thoroughly and then spraying the walls and floor with a 3 per cent. solution of formaline or a 1 per cent. solution of copper sulphate (blue stone). H. W. BARRÉ, Botanist, S. C., Experiment Station.

Foley's Kidney Remedy will cure any case of kidney and bladder trouble not beyond the reach of medicine. No medicine can do more. W. E. Brown & Co.

On Choosing Legislators.

Does it often occur to the average voter that the legislature controls in a large measure the development of the public school system and colleges of the State? Does Winthrop need a new kitchen? The legislature decides whether it shall have the money with which to build it. Does the South Carolina University need both dormitory? Should Clemson's troubles in administration be some into the hands of the trustees? The members of the legislature must decide. Shall a fund be provided to lengthen the school term of the weak public schools? Shall they be helped to buy libraries? The man you send to legislature must say yes or no.

Often these questions are decided by a very few votes, not infrequently by one. Sometimes in the House and frequently in the Senate one member decides the fate of large issues. The members of the legislature is of great importance to the State at large. Each county must, of course, consider local issues in choosing representatives, but voters should, at the same time, think seriously of the greater issues involved. Counties are judged in considerable measure by the character of their representatives and county pride should play no small part in selecting delegations.

When all this is realized it becomes rather distressing to find that there are voters who cast their votes from small personal motives. The total number who are influenced by political grudges, personal animosities, tribal likes and dislikes, or who cast their votes thoughtlessly are at times enough to elect or defeat legislative candidates.

This is all said without regard to any aspirant for legislative honors in this county, however or in the past. But the time is at hand when voters will be called on to choose their representatives, such reflections are very timely.—Beaufort Gazette.

Baths in Finland. One of the greatest trials a visitor in Finland has to endure is a Finnish bath. The method of procedure is unique. Dressed of outer clothing and attired in a light and airy cotton garment, you are slung in a sort of hammock composed of cord above a large receptacle like the boilers in public laundries. This is almost filled with cold water, into which at the right moment is flung a large red-hot brick or piece of iron, which of course causes an overwhelming rush of steam to ascend and almost choke you. Then when that process has gone on sufficiently long you are slung out of your hammock, immersed in cold water, and resume your drab treatment until you resume your drab, sad and wiser than before your novel experience.

This phenomenon is due to the greater expansion of the side of a monument placed inside, say, Nelson's column, in Trafalgar square, and has been found to describe on every clear day an ellipse of nearly half an inch in diameter.—English Mechanic.

The Kaffirs Thought It a Joke.

I once took some Kaffirs from their desolate homes in the more desolate gorges beyond the mountain ranges to the more civilized south. Like most savages, they looked with stupid indifference at the marvels about them, and once only were they excited by an incident which opened their eyes to what they considered a most extraordinary and unnatural state of things. They were descending a road when one of them chanced to remark that he was hungry, and the English "sahib" here-it him some food at a wayside change hands. "How is this?" he inquired in surprise. "Do you have to pay for food in this country?" "Certainly." "What a country!" cried the man in amazement. Then, after pondering awhile, he continued doubtfully: "Suppose a man had no money in this country. He might starve."

"It is quite possible." The Kaffir shook with uncontrollable laughter. It was the best joke he had ever heard. He then explained the ridiculous system to his companions, and they roared in chorus. "Where Three Empires Meet."

Literary Censorship in Russia.

In an article on the literary censorship in Russia a writer in the Frankfurter Zeitung says that some of the queer examples of this work on the part of the czar's government are worthy of note. In a poem the line "Under strange skies we may be happy" was canceled, with the remark that "no sky can be more conducive to happiness than that which spreads over Russia." A biography of Sumarokov mentions the novel "Korew" as his first "creation." The sentence was blotted out because "God alone creates. Man may write, work, compose, etc., but he does not 'create.'" In the names of the gods of Greek mythology are written capital letters, in the case of Mrs. Our gracious czar has had so many years that he owes Mars this compliment." A poem was suppressed because it contained the line, "To solitude devoted, I despise the world." The censor said: "Despising so generally includes also the czar. Thank me, writer, for saving you from Siberia."

There is no cough medicine so popular as Foley's Honey and Tar. It never fails to cure coughs and colds and is especially recommended for chronic and bronchial coughs. W. E. Brown & Co.

An Unnatural Conclusion.

Now she was enraptured with her sweetest and most cherished girl friend in a corner of the piazza, and I seated just inside the French window behind a massive rubber plant. Rather significant vegetation under the circumstances, for, curious as it may seem, I observed that the latter bit her lip now and then and did not appear enthusiastically joyous or congratulatory, as warranted by the occasion. But the innocent cooing and amorous gurgling did not cease.

"And to think, to think," gush she, "that such heavenly bliss as fell to my lot, might have escaped me forever! Dear Bob! Did I ever tell you he had proposed to me twice?" Then the unsympathetic auditor assumed an air of innocence. "Didn't you hear him the first time?" she inquired with raised eyebrows. "She is not going to be the maid of honor.—Exchange.

Echoes of the Past.

Mark Anthony had asked his countrymen to lead him their ears. "I want them for a loan exposition," he explained. "I have already a splendid collection of Roman noses."

Why Do You Suffer?

With headache, biliousness, constipation and the ills it entails, when Foley's Orino Laxative will relieve and cure you. It tones up all the digestive organs, carries off the waste matter and stimulates the bowels to their normal activity. It is a splendid spring medicine. W. E. Brown & Co.

The Skin of My Teeth.

In the book of Job appears the sentence, "An escaped jaw was the skin of my teeth," which is modernized "by the skin of my teeth" and gives the idea of a narrow escape, one so close as to be just by the thickness of the skin on the teeth, which is so thin that a microscope has yet been able to find it. "To cast in the teeth" means to throw defiant reproaches or insults spitefully, as one would cast a stone at the exposed teeth of a snarling dog. "Tooth and nail" denotes the manner of an action full of frenzied fury, typified by biting and scratching, as when two belligerent cats make the fur fly.

Court Trials.

At the coronation of Queen Adelaide that lady's train tore itself away from the bodice, taking part of the latter with it. When Elizabeth of Austria entered Paris to marry Charles IX, her train was seventy feet long and both of Valois wore a train six yards long, which was carried after her by gentlemen as she danced. Mary, queen of Scots, is said to have worn a twelve yard train at Ball Mazarin, also carried by a gentleman.—Fall Mail Magazine.

A Heavyweight.

"And then," she said in telling of the romantic episode, "she sprang to his arms." "She did?" "Of course. Do you doubt it?" "Oh, no," he replied, "but after seeing her I can't help thinking that it must have jarred him quite a bit."—Chicago Post.

Today.

If you made mistakes yesterday, forget them. No strength was ever built upon continued regret. Today is the result of yesterday, but it is more important to remember that tomorrow is the result of today.
