Laxative Fruit Syrup
W. E. BROWN & CO.

Cures Bilioussness, Sick Headache, Sour Stomach, Torpid Liver and Chronic Constipation. Pleasant to take

Cleanses the system thoroughly and clears sallow complexions of pimples and blotches. It is guaranteed

JUST ARRIVED!
A car of the celebrated **O. K. Stoves and Ranges**
Over 1,000 in use in Clarendon County.
Every Owner of an O. K. are loud in their praises of them.
THE MANNING HARDWARE CO.

In the Fight.
The decks are cleared for action. I am now in the race for cash trade, and I have a splendid stock of everything needed on the farm or in the household.
I cordially invite an inspection of my stock of

Dry Goods, Fancy Goods, Notions, Shoes, Hats, Clothing, Crockery, Tin, Wooden and Hardware. GROCERIES
of all kinds and in large quantities.
Come to my store, price my goods, examine the quality, and if not as cheap as the cheapest, then don't buy from me. I have made special arrangements to do a large cash trade this season, and I fully realize that I must, to do business, meet sharp competition. This I have prepared for.
I want your trade
Yours, etc.,
B. A. JOHNSON.

SOLD! SELLING! FOR SALE!
We wish to thank our customers for the liberal patronage during the fall.
We beg to say our Stock is complete in every line, and we can save you money on any article in our Lines.
We have just unloaded two cars of Buggies into our Repository, and we give the best guarantee with our goods of any dealer in the county. When it comes to Wagons and Hand-made Harness our competitors are at a loss.
Our buyer is now in the West and this week we will unload a car of

Mules and Horses
and can fill any order.
Full Line of Oliver Chilled Plows and Plow Repairs always on hand.
We only ask for your inspection of our Stock before you buy. To look and price, means we trade.
Wishing you all a merry Christmas, I am yours for a square deal, small profits and quick sales,
D. M. BRADHAM & SON

BANK OF CLARENDON, Manning, S. C.
We solicit your banking business. It is to your interest to patronize this safe and strong bank. Four years of continued growth and operation without the loss of as much as a dollar, speaks for itself, does it not?
We want to be your bankers, if you are not already a customer, come and see us about it, and tell us why. If you are, come and see us anyhow. It is never too late to do a good thing for yourself.
Interest Paid on Savings Deposits.
BANK OF CLARENDON, Manning, S. C.

Physicians Advise
Use of a good laxative, to keep the bowels open and prevent the poisons of undigested food from settling on the system.
The latest product of science is **VELVO Laxative Liver Syrup**, purely vegetable, gentle, and of a pleasant, aromatic taste. Velvo acts on the liver, as well as on the bowels, and is of the greatest possible efficacy in constipation, indigestion, nervousness, sick headache, feverishness, colic, flatulence, etc. Try

Home Course In Poultry Keeping

IV. - The Modern Science of Incubation.

By **MILO M. HASTINGS,**
Formerly Poultryman at Kansas Experiment Station, Commercial Poultry Expert of the United States Department of Agriculture, Author of "The Dollar Hen."

Incubation has been practiced in Egypt and by the Chinese for several thousand years, but has been developed in this country only within the memory of the present generation. Because of the great extent to which incubators have been advertised, the large circulation of poultry books put out by incubator manufacturers and the favorable views of the poultry papers, which get their chief support from incubator advertisements, the general impression is that artificial incubation is a greater improvement over the natural method of hatching than is in reality the case.

Hens or Incubators.
One of the chief claims of the artificial incubation is that by this means chicks can be produced at any season of the year, whereas hens brood only in the spring and summer. This advantage is not great, however, as most inexperienced people believe, for chickens hatched in the winter are difficult to rear, and because of the evening up of prices due to cold storage, as referred to in a previous lesson, the use

of incubators for hatching winter chicks is not particularly profitable. The second important advantage claimed for incubators is that of saving labor, or, in other words, they enable one person to hatch a much larger number of chicks than would be possible with the use of hens. This claim is worthy of consideration. It is, in fact, the chief reason why incubators have gained their present standing.

As to the percentage of hatching and the vitality of the chicks, the average incubator, especially in the hands of the novice, will hardly equal the natural methods. The writer made an extensive study of the results obtained with incubators by Kansas farmers. The results showed that about as many farmers failed with incubators as succeeded with them.

The percentage of eggs that hatch either in incubators or with hens is commonly overestimated. The extraordinary hatches at poultry shows are usually arranged by setting two incubators and testing out the live eggs just before hatching and putting them in the one machine. A 60 per cent hatch of all eggs set for the season is good enough. Many very large and successful poultry farms have low averages. The advisability of purchasing an incubator will depend upon many circumstances. All those who breed Leghorns will require incubators. With the Plymouth Rocks, Wyandottes or Rhode Island Reds I should favor hatching with hens until the poultry work grows to such size that this becomes impractical.

Eggs For Hatching.
There are many superstitious notions prevalent regarding the relation of the shape of an egg to its vitality and the sex of the forthcoming chicken. Such notions have no ground in fact. Eggs having weak shells that might become broken in the nest or unseasonably small eggs should be discarded. If there are more eggs available than we wish for a sitting it will be better to select the fresher eggs than to overparticular about shape and appearance. The eggs for hatching should be stored in a cool, dry location and shifted or rolled about occasionally.

Eggs exposed to freezing temperature if not actually frozen may still retain their vitality, but it is generally considered best to keep them at a temperature between 40 and 70 degrees. If kept too warm eggs dry out rapidly and will not hold their vitality. A good rule is not to set eggs over two weeks old. The idea that jarring, as by thunder, will injure the hatching of eggs is without foundation; likewise the advice to let eggs rest after shipping has been proved to be groundless.

Accommodations For Sitting Hens.
The convenience of the arrangement for sitting hens has a great deal to do with the success of the hatching. By all means I should advise that a place be provided for the sitting hens away from the general poultry house. This may be in a separate room or building, where tiers of boxes are used for the nests and feed, water and dust wallow provided in the room. The nest boxes are open on the top, not on the side, and a board is laid loosely across

at the time the trays are taken out to be turned end to end, a precaution necessary to equalize any effects due to different temperatures in the various parts of the machine. Cooling the eggs, upon which many incubator manufacturers lay considerable stress, has never been proved to be of benefit. A good thermometer is essential in running an incubator and is best laid face downward on top of the eggs. Thermometers hung in a fixed position above the eggs frequently fail to register the temperature of the eggs themselves.

The best location for an incubator is in the cellar. The more even in temperature this cellar is kept the better. The cellar should not be so damp as to warp the incubator, but on the other hand, should not be entirely dry. If there is a furnace in the cellar or if in any way heated open water should be exposed in a warm place. The ventilation of the cellar is not as important as is ordinarily imagined, but chicks need very little oxygen. The increased evaporation induced by too much ventilation is a greater evil than lack of fresh air.

them to confine the hen. The hens are set in groups, so that those sitting on eggs which are to hatch the same time may be given their liberty at once. The attendant has only to remove the board from the nest, lift off the hens and return in a hour to see that there is a hen on each nest.
Another scheme for the easy handling of sitting hens, the plans for which have been largely sold, consists in constructing a series of outdoor nests and runways made by setting foot wide boards on edge about one foot apart. The runways are covered with laths or netting except the one in which the nest is constructed, and which is protected from the weather by another wide board to form a roof. Each hen thus has her individual nest and a runway, in which the hen may exercise and dust herself to get rid of lice. Old fruit cans are used to provide food and water.

Such an arrangement for sitting hens reduces the work of caring for them to a minimum, and if the nests are well protected from the weather and the ground where the nests are located thrown up so that the water will not run in the results are usually better than with hens set indoors. The nests should be arranged so that hens may be shut on them when the eggs begin to hatch, or the restless hen will frequently leave the nest with the first few chicks and allow the others to die in the shell.

Essentials of a Good Incubator.
In the case of artificial incubation we have a number of points to look after that do not concern us when hatching hens. The first to be observed is uniform temperature—103 for all eggs in the machine at all times. The second consideration and one that causes much more trouble in practice is to provide just sufficient circulation of air to just sufficient dryness to cause the eggs to lose water by evaporation at the normal rate; otherwise the body of the chick will contain too much water or not enough and die in the shell or shortly after hatching. The noise can do no better, as far as this and other points of incubation are concerned, than to follow the directions of the maker of his machine.

The following discussion of the points of a good incubator are given to help the poultryman in selecting a machine or in deciding whether he is capable of handling the problem of artificial incubation successfully rather than for the purpose of teaching him to run any particular incubator.

The case of the incubator should be built double or triple wall to withstand variation in the outside temperature. The door should fit neatly and should be made of double glass. The lamp, both bowl and chimney, should be made of heavy metal material and should have a wick sufficiently wide to maintain the temperature of the incubator with a low flame. The lamp is generally placed at the end of the machine, though there are some good incubators now made with the lamp placed underneath the machine. The heat is got from the lamp to the eggs by means of a circulation of hot air or a tank of hot water. The hot air machines seem to have proved most successful in practice, and the majority of well known makes are now of that type. It is easier, however, to make a cheap hot water machine that will retain the heat than it is to make a hot air machine. This is because the tank of hot water holds the heat against sudden changes in outside temperature.

Regulators composed of two metals, as aluminum and steel, are best. Water set filled with ether are more sensitive, but weaker in action. Hard rubber bars are frequently used. The incubator needs no arrangement for turning eggs, as this is not as important a part of the operation as is frequently stated, and the eggs can be rolled around readily with the hand.

Prof. C. C. Newman,
S. C. Experiment Station.

A Man Wants To Die
only when a lazy liver and sluggish bowels cause frightful despondency. But Dr. King's New Life Pills expel poisons from the system; bring bile and cod liver oil, cure Liver Stomach and Kidney troubles; impart health and vigor to the weak, nervous and ailing. 25c at all druggists.

The First Fork.
The first fork? The fork, as a matter of fact, did not appear as a table implement until the seventeenth century, though as early as the thirteenth century gold and silver ones were made for special purposes. The ordinary diner was only provided with a trencher, a napkin and a spoon. For knife he used his own, which he carried about, and, worse, there was no second trencher, no second spoon. When the several courses came along he exercised his ingenuity and mopped his trencher with his bread. His spoon—well, we ourselves lick postage stamps!—London Chronicle.

Comparing Notes.
Mrs. Slowboy—My husband's so lazy that if it wasn't for me I don't believe he would get up in time to go to bed.
Mrs. Rounder—My husband's different. He scarcely goes to bed in time to get up.

A Regular Tom-Boy
was Susi—climbing trees and fences, jumping ditches, whistling, always getting scratches, cuts, sprains, bruises, bumps, burns or scalds. But laws! Her mother just applied Bucklen's Arnica Salve and cured her quick. Heals everything—bleeding, Boils, Ulcers, Eczema, Old Sores, Corns or Piles. Try it 25c at all druggists.

His Job.
Joe—I have got a good job at last, Ben, me boy.
Ben—What be doin'?
Joe—Oh, I'm a cashier in a p'lice office, and a rattlin' good job it is.
Ben—A cashier in a p'lice office, Joe? What's that? I never 'eard of that afore. What's yer dooty?
Joe—Duty! I counts the coppers as they come in.—London Answers.

Pretty Icy.
"So she treated you coldly?"
"Coldly? Say, I'd have had to have a sextant and an artificial horizon to be able to get out what latitude I was in if I had been there for that purpose."—Chicago Record-Herald.

DR. KING'S NEW DISCOVERY
Will Surely Stop That Cough.

Cover Crops in Orchards.
Clemson Extension Work—Article VI.
The importance of planting cover crops in our orchards is being more fully appreciated each year, yet in some of the principal fruit districts of the South we find many large orchards where no cover crops have been planted. The result is the soil in these orchards is becoming more impoverished each year by the leaching of soluble fertilizers by surface washing and for want of humus. In most cases the orchards are located on the more elevated land which is hilly or rolling with sandy soil and clay subsoil. Such soil is hard to prevent surface washing entirely, but it could be reduced to the minimum by the proper use of cover crops. Not only do these cover crops prevent surface washing, but they utilize the soluble fertilizers which would otherwise leach out of the soil. When the cover is turned under, it adds considerable humus to the soil and the fertilizers required to produce it become available for the use of the trees.

The plants used as cover crops are of two distinct types, leguminous and non-leguminous plants. The legumes, such as clover, cowpeas and vetch, in addition to furnishing humus have the power of collecting nitrogen from the air and adding it to the soil. The non-leguminous plants, such as rye, oats and turnips, do not collect nitrogen from the air but when sown in the early fall consume soluble plant food during their growth which would otherwise be lost and adding it to the soil when returned to the soil when the cover crop is plowed under in the spring. Most soils where orchards are planted are deficient in both humus and nitrogen and therefore a leguminous cover crop should be selected.

Such a cover crop should be sown without the use of nitrogenous fertilizers than a non-leguminous cover crop may be planted.

I think I am safe in saying, however, that there are few commercial orchards in the South that are not in need of both nitrogen and humus. To accomplish our purpose of adding nitrogen and humus to the soil and to prevent surface washing, we should have both a winter and summer cover crop. Rye followed by clover give the best results on poor soil. The rye should be sown in the early fall in order that it may cover the ground as soon as possible and prevent surface washing. The rye should be turned under not later than the last of March. This may be accomplished by doubling the rye with the disk harrow and this method is preferable to plowing as it avoids the danger of plowing too deep near the trees. A strip of land six to ten feet wide between the rows of trees should be prepared and the peas sown broadcast about the first of May. The peas should be sown in a disk harrow and the land can be seeded to rye or crimson clover.

After one or two crops of rye and peas have been worked into the soil, crimson clover or hairy vetch is the best cover crop. Crimson clover makes an excellent cover crop from September to May. As soon as enough seed have ripened to reseed itself, the clover should be worked into the soil with a disk harrow. If the clover is allowed to occupy all of the space between the rows of trees during the months of March and April it will retard the growth of trees to some extent, and therefore I think it best to turn under the clover early in March. My plan is to fertilize and cultivate the trees early in March, leaving a narrow strip of clover in the middle to reseed itself. A strip two or three feet wide will produce enough seed for the entire middle. After the seed have ripened, the clover is worked into the soil with a disk harrow and the land may be mowed and the seed scattered over the entire middle by means of a tooth harrow. Hairy vetch is an excellent cover crop and may be treated in the same way as crimson clover. The seed are sown in August or September and the crop worked into the soil in the spring.

If crimson clover or hairy vetch is to be planted on land where neither of these crops has grown before, it will be necessary to inoculate the seed by sowing soil with the vetch and clover before previously grown. This soil may be scattered over the land in the same way as fertilizer immediately after sowing the seed, and then mixed with the soil and seed by means of a tooth harrow. When the clover and vetch are sown over crops, but they do not thrive on poor land as well as rye.

In no case should grain be allowed to mature in the orchard as it would rob the trees of moisture and plant food at the very time they need them most. When a good crop of cowpeas, vetch or crimson clover is added to the soil, we are at the same time greatly enriching the supply of nitrogen which is our most expensive fertilizer.

She Didn't Dance.
In 1736 a gentleman living in Hampshire, England, named Samuel Baldwin, died after a rather stormy and most unhappy married life. In his will he directed that all his vast estate be given his wife on condition that she should dance upon his grave from time to time. As the will further instructed that his remains should be taken by boat to the Needles and from there cast into the sea, this, of course, prevented his widow from fulfilling the conditions of the will and thus lost her property. He, however, had his revenge for the various tempers she had exhibited during their life together and for the remarks she often made that she "would yet dance upon his grave."—Cincinnati Commercial Tribune.

His Mental Incapacity.
The Court—So you ask divorce from this man on the ground of mental incapacity. What proof have you that he's insane? The Woman—Who said he was insane, your honor? The Court—Why, you say he is mentally incapable. The Woman—Yes; mentally incapable of understanding that I'm boss.

Enthusiasm Dullied.
"Don't you feel as if you would like to leave footprints in the sands of time?" asked the ambitious citizen.
"No," answered Mr. Crossroads gloomily; "not where I live the mud is eight inches deep, and I don't feel as if I wanted to see another footprint as long as I live."—Washington Star.

Foley Kidney Pills are antiseptic, tonic and restorative and a prompt corrective of all urinary irregularities. Refuse substitutes. W. E. Brown & Co.

The Confederate Monument.
The movement so long neglected has at last begun to erect a monument to the memory of the heroes who wore the gray,—soldiers whose record was the marvel of the civilized world. Clarendon now proposes to place upon the court house square a suitable mark of its patriotism by having erected a shaft in honor of those who responded and laid down their lives upon the country's altar. All contributions sent to THE MANNING TIMES will be acknowledged through its columns.

Lion Fondles A Child.
In Pittsburg a savage lion fondled the hand that a child thrust into his cage. Danger to a child is sometimes great when least regarded. Often it comes through Colds, Croup, and Whooping Cough. They slay thousands that Dr. King's New Discovery could have saved. "A few doses cured our baby of a very bad case of Croup," writes Mrs. George B. Davis, of Flat Rock, N. C. "We always give it to him when he takes cold. It's a wonderful medicine for babies." Best for Coughs, Colds, LaGrippe, Asthma, Hoarse throats, Weak Lungs, Whooping Cough, etc. Price, 50c. Trial bottle free. Guaranteed by all druggists.

Chinese Names of Places.
Chinese names of places often define their character. Thus the terminal "yang" means fortress, Pingyang the "fortress of peace." "Cheng" means a walled city, as Fenghuangcheng the "Phoenix walled city." "Shan" is a mountain, "hai" the sea, "kuan" a camp; thus Shangkuan is the "mountain sea camp." A "ling" is a mountain pass; Moudeling, near Mukden, is the "heaven scraping pass."

The suffixes "tao" and "to" indicate islands; "po" or "pho" a harbor; "wan," a bay; "kiang" and "ho," a river; "kow," a port; "tu," a first class city; "je," a province; "king" is capital. These suffixes help to explain such familiar names in these days as Sanshantao, Chemulpo, Tallenwan, Yangtsching, Hoangho, Yinkow, Chefoo, Anju, Peking and Nanking.—New York Tribune.

The Suspect's Declaration.
Parson White's precautionary measure of protecting his chicken coop with chilled steel bars was futile, for that very night four more of his choice Leghorns disappeared, leaving the severed and twisted bars as the only visible evidence of the theft. However, his suspicions pointed toward his next door neighbor, whom he had seen prowling around his yard that day, and accordingly he had this suspect up in police court the next morning. "If the prisoner can file an alibi I'll let him off with a suspended sentence," announced the judge at the end of the evidence. "Can you file an alibi, Ham?"
"Ah guess Ah kin," eagerly rejoined the suspect. "If ah ain't my nahder den Pabson White's chicken coop bars!"—Brooklyn Life.
