HARD TO DECIDE AINT IT?

MEASURES ALTITUDES.

The Use of the Barograph on Asro-

planes and Balloons.

What the compass is to the mariner

the barograph is to the aviator. The

baregraph is an instrument for meas-

uring altitudes. The pressure of the

air as it increases or decreases causes

a delicate needle to trace a wavy line

upon a cylinder which revolves by

clockwork. This line indicates not

only the exact height that is reached

by the aviator, but also the speed at

The barograph is kept in a weather

proof bex with a glass front, which is

attached to a bar of the aeroplane or

to a rope on the balloon. It is official-

ly sealed before the aviator embarks.

so there is no possibility of tampering

with it, and the seal is taken off in

the presence of witnesses at the end

of the flight. In this way it is possi-

ble to establish absolutely and graph-

feally the altitude which an aviator

attains in his aeroplane or balloon.

It is necessary for the aviator to

watch the barograph constantly, as it

most to the foot. The sky pilot has to

keep his eye on the indicator much as

the man at the wheel of the seagoing

ahip watches his compass. Should the

aeroplane or the balloon rise or fall

ten or twenty feet the aviator would

not be conscious of it unless he looked

at the wavering needle trucing its

him. This tells him immediately of

any changes in the nature of the alt

currents and gives him timely warning

These instruments are so delicate

and so accurate, it is said, that a man

might hang one of them about his

neck in its glass case or carry it in his

hand and climb a flight of stairs, the

height of his ascent being graphically

indicated by the inked needle on the

mer years rejoiced in rather curious

A boat named What's That to You?

"Boat aboy! Your captain's name?"

"And what are you laden with?"

"I asked you the name of the ship."

"You shall be reported for your

insolence!" roared the coast guards-

man. Again he put the question, and,

receiving the same reply, the boat was

commanded to remain where she was.

In the morning two boats were seen

keeping guard. The officials, as they

boarded the ressel with full authority

to seize the offenders, observed for the

first time the name painted in large

letters. Amid the laughter and jeers

of the crew of the What's That to

Our First Locomotives.

States were brought over from Eng-

land by Boratio Allen of New York

in the fall of 1820 or the spring of

1800 and one of them was set up on

doned. The first locomotive construct-

ed in this country was built by the

and named the Phoenix. A second en-

gine was built the same year by the

same establishment and for the same

road and named the West Point. In

the spring of 1831 a third engine was built by the same establishment for

the Mohawk & Hudson railroad from

Albany to Schenectady and called the

De Witt Clinton. This was the first

locomotive run in the state of New

York. The first Stephenson locomotive

ever imported into this country was

the Robert Fulton. This engine was

brought out in the summer of 1831 for

the Mohawk & Hudson railroad. It

was subsequently rebuilt and named

The Eaglet's First Flight.

account of the first flight of an eaglet

whose life from babyhood he had

watched. One day he ventured to the

edge of the cliff containing his cradle

and looked about. Suddenly his moth-

er swung past on silent wings and

tried to tempt him from his fast-

ness." But he was unwilling or afraid.

a wild, weird cry rang through the

glen. "For the first time I had heard

the yelp of the adult eagle, the voice

of the queen of birds calling to her

young. The eaglet cheeped continuous

ly until he flapped to the very edge of

now he, too, changed his cry; his voice

seemed to break, and the adult yell

burst from his throat. The eagles

called to each other, yelp answering

yelp. The young eagle gazed round

him, spread out his giant wings and

vanished forever from my sight among

Baboons and Water.

In Captain Drayson's "Sporting

Scenes Among the Kaffirs" we find the

following: "Well," said Kemp, "when

I go into a country where there is not

much water I always take my ba-

boon." "You don't drink him, do you?"

"No, but I make him show me water."

"How do you do that?" "In this way:

When water gets scarce I give the

Bavian none. If he does not seem

thirsty I rub a little salt on his tongue.

I then take him out with a long string

or chain. At first it was difficult to

make him understand what was want-

ed, for he always wished to go back

to the wagons. Now, however, he is

well trained. When I get him out

some distance I let him go. He runs

along a bit, scratches himself, shows

his teeth at me, takes a smell up wind,

looks all round, picks up a bit of grass,

smells or eats it, stands up for another

sniff, canters on, and so on. Wherever

the nearest water is there he is sure to

The Tyrant In the Field.

There have been few commanders so

tyrannous as Lopez, the dictator of

Paraguay, when, in the war of 1865-70,

it fought single handed the neighbor-

ing countries of Argentina, Brazil and

Uruguay. Lopez, says Mr. W. H. Koe-

bel in his "Argentina," was wont to

carry the theory of victory or death to

an uncomfortable point. "Officers

were executed for mere remarks

whose tone fell beneath the standard

of confidence that Lopez had set up

for himself. One, for instance, was

shot having announced in the

course of his duty that the enemy was

strongly increnched! Another met his

end on account of an unguarded

speech to the effect that the Para-

guayan army was accustomed to count

the enemy's losses and forget its own."
