SUMMERTON. Let's not be false accusers but as one party, work together for the good of our great commonwealth, of this land and country of ours. And now the County Conventions have been held and I regret the factional lines were drawn in most of the counties between Bleese and Smith, but as such is true now let each faction do everything in their power in a straight forward, and honest way to win and when the election is over which ever side wins let the other side say AMEN.

What you eat determines your color, according to Bergfeld, a German investigator—not necessarily that your self could effect any change of color, but your ancestors for thousands of years have unconsciously been influenced by the food they have eaten and the drinks they have drunk.

POLAR RESEARCH. Arctic and Antarctic Problems That Still Remain Unsolved. The era of pole hunting is now happily over, and the best result of Peary's and Amundsen's athletic feats in the north and south is that the really important problems of the circumpolar regions can henceforth be attacked with a single mind.
