Mrs. Clarendon W. Barron has issued invitations to members of the younger set for a euchre party on Monday afternoon at half after four o'clock, in compliment to her guest. Miss Helen Capwell of Providence, Rhode Island.

We were in error about two weeks ago, when we said Mr. W. T. Sprott of Jordan, had been operated on in Columbia, but he did have a very serious operation performed last Friday, and we learn he is getting along as well as could be expected under the conditions.

-Columbia Record.

On next Sunday morning March 12th at 11 o'clock, Rev. Guy, pastor of the Pinewood Baptist church at Pinewood will ordain two deacons assisted by vis iting pastors and other church officers The same afternoon at 4 o'clock at the church, the candidates for church membership will be baptized.

earnestly requested to be present at a called meeting of the League, to be seld at the court house. Thursday, slarch 9 h. at 11 o'clock a. m. An ur gent business matter requiring the atention of each member makes this called meeting necessary, and for this reason a full attendance is desired.

We commend the ladies of the civic ague for the good work they have en doing at the cemetery, and es -cially Mrs. Murrett Mouzon, who is just had the iron fence painted, and in of the grounds worked off, which in he future will be kept in perfect conlition, provided the people will give her the financial aid, and we have no loubt but what they will.

Manning's big automobile fire truck as arrived, and with the fine system of waterworks we now have, this town s certainly up-to-date from a fire-fighting view. The truck is a six cylinder, 60-horse power American La Franc, fully equipped with ladders, picks. axes, a chemical tank, and in fact everything that is needed. We also have a good volunteer company, and with a little practice, and the proper -ncouragement from the citizens, the boys will give a good account of themselves whenever an alarm is turned in.

Last Thursday morning about one o'clock the fire alarm was sounded, and it was found that the Bottling Works. owned by Mr. G. L. Thames was afire. Adjoining this building on one side was Frierson Bros. stand, and on the other an automobile shop, run by June and Blackwell. The fire had gained nch head-way, on account of all buildings being of wood, that it looked at one time like the damage would be greater than it was. The buildings were all owned by Mr. D. M. Bradham. The following are the losses: The Bot ling Works complete, with \$600 00 insurance, Frierson Bros., complete, no insurance, June and Blackwell, com-plete, no insurance, Willie Flowers, one Ford car, R. L. Bell, damaged con-

The Home Demonstration Club held its regular meeting on the third Wednesday in February in the school auditorium at Summertion. Miss Katherine Richardson, County Demoustrator, was present and the subject for discussion and demonstration was the curing of meat. Miss Richardson gave a very interesting talk and used several demonstrations of how meat could be properly cured at home. Several new members were added to the list, and the outlook for this recently organized club is very bright. Much interest is being manifested by the memers and it is hoped to make the club a very successful and profitable affair. meeting in the school auditorium on the third Wednesday in March.

All members of the Civic League are | The James McDowell Ministerial Scholarship at Davidson College.

Never was a memorial more fittingly erected than when recently the children of the late Rev. James McDowell, D D of Harmony Presbytery, enowed this scholarship in Davidson College with one thousand dollars in memory of their father. Mr. McDowell died in Yorkville May 7, 1913, eighty-one years of age, and after a long life of a most fruitful service as a minister of the Gospel. Such earnest sermons he preached, so sound and strong, so appealing in the gentle spirit of the message and man, and so did he love to preach, even far beyond his bodily strength, that his three children, Mrs. Hessie M. Seabrook, Edisto Island, Mrs. Janie M. Richards, Davidson, N. C., and Dr. James McDowell, York, most appropriately desired to establish a scholarship in this institution, noted

for the number and ability of the ministers it has educated, which would perpetually help to prapare young men to cry out the same glad me sage of hopand salvation to a waiting world of Christ-needy people.
This adds another to this growing

list of scholarships, the income from which assists the college in preparing the choicest of our young men to become heralds of the Cross more fitting memorial of a departed loved one! Not stone that crumbles. but lives prepared to carry the Gospe to the "uttermost parts of the earth. Davidson's crown is the large number of ministers she has educated, and she has done it under heavy financial strain. This love and thoughtfulness of these childrenof a noble man help to carry that load, and, in the name of Christ and His servant, their father they will assist in sending out again and again a line of young ministers who shall emulate Dr. McDowell in his service for the Master.

Others could well do the same thing and are doing it and will. The college is blessed with nearly eighty candidates for the ministry this year. It is said, that no institution in America, doing strictly college work, can equal this record. The college needs some forty more of these scholorships to provide for the candidates now here. Are there not many of God's servants who would like to establish such a memor ial in memory of a loved one? Davidson. N. C. W. J. Martin.

McLauriu Says Warehouse Stability Unshak en by Insurance Storm.

Columbia, March 7-"That there no reason for uneasiness as to the fine insurance conditions in South Carolina resulting in the calling of loans upon large investments, and that the insurance placed through the State warecontinues in its satisfactory The meeting adjourned to hold its next course," is the wording of a telegram received today by John K. Aull, secretary, from John L. McLaurin, State warehouse commissioner, who is in New York

Keep Eggs For Use Next Winter.

Clemson College, March-At this sea son of the year when eggs are so plen-tiful, it is exceedingly profitable for the housewife to preserve as many dozens as are needed to make up the winters shortage. By a simple process of preserving, that seals the shell of P. Moses Plaintiff, the egg like a tin can and prevents the evaporation of the contents or outside germs from affecting the egg, it is possible to use these eggs next October, November, and December for all cooking purposes. These preserved eggs can be poached, fried, boiled, or scramb led, and the whites will even beat up stiff for cakes.

The preservative used is commonly called water glass, while the technical name is sodium silicate. It can be purchased in either the dry powdered or the liquid state. The for fifty cents, and the liquid costs from 75 cents to one dollar a gallon. The powdered form is sold at two and onehalf pounds for fifty cents, and the liquid costs from 75 cents to one del-York on Monday, says that there is no lar a gallon. Dangers of Drafts.

Drafts feel dest when we are hot and perspiring, just when they are most dangerous and the result is Neuralgia, Stiff Neck, Sore Muscles or sometimes an attack of Rheumatism. In such cases apply Sloan's Liniment. It stimulates circulation to the sore and painful part. The blood flows freely and in a short time the stiffness and pain leaves. Those suffering from Neuralgis or Neuralgic Headache will find one or two applications of Sloan's Liniment will give grateful relief. The agonizing pain gives way to a tingling sensation of comfort and warmth and quiet rest and sleep is possible. Good for Neuritis too. Price 25c at your Druggist—Adv.

POULTRY GIRL COULD

PLAN FOR HARD-SHELL EGGS

Mineral Elements Necessary Are Available in Much Cheaper Form Than in Feeding Grains.

The feeding of hens for the production of hard-shelled eggs, not easily breakable in handling, is possible and demands attention. Shells vary greatly in strength. A strong, heavy shell is not nearly so likely to be broken by the jars, jolts and rough handling incident to ordinary shipment as a weak one.

Chemical analysis shows that the shell of the egg is largely carbonate of lime, but that it also contains carbonate of magnesia, mineral phosphate and some organic matter. If strong shells are to be produced, the mineral elements must not be lacking. Grains that are ordinarily fed do not contain these mineral elements in sufficient proportions, and an additional and separate supply is necessary. Fortunately, these mineral elements are available in much cheaper forms than in grains. Lime is the principal ingredient of oyster shells. Iron, magnesia and often phosphorus in many kinds of artificial grit, may be procured for about the same price, while these elements in grain would cost at least double these figures.

Bone meal contains phosphorus in appreciable amounts, besides lime, magnesia, etc, and while expensive, it is effective in giving the shell an evenness and fineness of texture which

adds much to its strength. It is, therefore, often used as an ingredient for dry mashes for laying flocks, usually in amount varying from three to five Eggs that won't break give the poultryman greater profits than eggs

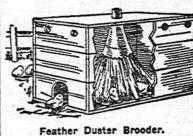

FEATHER DUSTER AS BROODER

breakable kind.

that will. Make your hens lay the non-

Feathers Are Arranged in Center of Box to Take Place of Those of the Mother Hen.

A very effective brooder can be made of an old feather duster hung in a box so that the tips of the feathers will come close to the bottom. The brooder consists of a wood box about far wrong if you walk in his footsteps. one foot high. This cover is removed, and a hole cut in the center to receive the shank of the duster after cutting

its handle off, writes William T. Miller of Roslindale, Mass., in Popular Mechanics. This makes an excellent substitute for the feathers of the hen. Some finely cut hay, or sand, is placed beneath so as to bring the level up cufficiently for the chicks to run among the feathers. For ventilation, bore some holes in the sides of the box near the top and cut a small opening for an entrance. For convenience in cleaning, the cover should be

WINTER FEED FOR THE HENS

Warm, Soft Mashes Sometimes Have Effect of Making Fowls Lazy-Feed Sparingly in Morning.

Amateurs sometimes are puzzled to know how much to feed when throwing grain in the litter and are prone to overfeed, making it so easy for the hens to fill their crops that they will not work long. If a dry mash is kept before the hens at all times, the poultrykeeper may comfort himself with the thought that his birds need never go hungry even if they have difficulty in finding the grain they need to satisfy themselves.

The use of warm, soft mashes some times has the effect of making hens lazy. If a heavy feeding of mash is given in the morning, the hens will fill up on that and then stand around for several hours. If the amount of mash is made so small that their hunger is not satisfied, no damage will result.

A mash at the close of day is not advisable, but it may be given an hour er two before roosting time and followed with a feeding of whole corn. The corn will almost always be eaten, m spite of the mash feed just consumed, and the hens will go to roost with full crops, the digestion of the two kinds of feed taking a long time.

Demand for Hen Turkeys. In marketing turkeys the hen turkey is more in demand than the male turkey. The market likes mediumsized turkeys. On some markets a 15pound turkey or over must await special customers, but a 10-pound turkey finds a ready buyer.

Cure Feather-Eating Habit. A feather-eater is seldom a male bird, but he suffers most from feathereating hens. Burning the end of the bill, a cruel method, is recommended as a curo; also adding a teaspoonful of salt to each two quarts of meat, is another.

CASTORIA For Infants and Children

START A SMALL DAIRY HERD

Numerous Failures to Realize Profits Attributed to Mismanagement and Wrong Beginning. (By C. A. BURNS, Department of Dairy Husbandry, Oklahoma Agricultural Col-lege.)

It is quite a well known fact that a great many Oklahoma dairy farmers are not realizing the profit they should. The numerous failures to realize such profits may be attributed to mismanagement, but as a general rule those who know enough to begin the "right way" in the dairy business are rather apt at staying in the "right way." If we should ask the successful men to explain the more necessary precautions in starting a dairy herd, I imagine they would give us a story somewhat similar to this: "In case you are not well acquainted with money into fine, pedigreed stock at first. Better get your experience on cheaper stock and add to your herd

perienced. Do not select your cows for your foundation stock by guesswork. An experienced eye can determine quite a little about the ability of a cow by the external appearance, but in most cases a record of the animal's ability as a producer is much safer. "Even though a grade herd is to be maintained at first, it is to be understood that a pedigreed buil should be used from the beginning. Make

sure that the bull is up to standard.

The cows in the grade herd should,

of course, be all of one breed, and

better cattle as you become more ex-

the bull of the same breed." It must be remembered that more rigid and careful selection and branding will be required to raise and maintain a high standard of production in a grade herd than would be required in a fine herd of pedigreed animals. As a last word, be sure never to neglect to use the Babcock milk tester and milk scales to determine the productive ability of every cow in the herd. It saves time, it saves trouble, it saves feed, and it saves money.

FENCES FOR SHEEP PASTURE

Advisable to Inclose Portion of Farm in Such Manner as to Keep Animais in Place.

The large majority of our farms are not suitably fenced to enable the farmers to pasture sheep, but, when considered from a business standpoint, we cannot doubt the advisability of inclosing a portion or all of the farm in such a manner that they can be kept where they belong. The most satisfactory fence is made

by using a 24-foot strip of woven wire for the bottom with two strands of barb wire above. This will serve the purpose for both sheep and cattle. If barb wire alone be used, the lower wires should be stretched tightly and placed close together.

To Drive Out Malaria And Build Up The System
Take the Old Standard GROVE'S TASTELESS chill TONIC. You know what you are taking, as the formula is printed on every label, showing it is Oninine and Iron in a tasteless form. The Quinine drives out malaria, the Iron builds up the system. 50 cents.

A woman would hardly marry a bow-legged man to reform him, and there are several other varieties of misshapen masculinity that it is just as futile to attempt to mend by means. of matrimony.-Detroit Journal.
