REAL WINTER DRESS

Model That Will Look Well in Velvet or Velveteen.

Fashion Designers Struggle Hard to Retain Straight Line Frock Which Has Been Favorite for Past Two Seasons.

To retain the straight line frock, which has been such a strong favorite for the past two seasons and still make it new and distinctly of the 1917-18 vintage is a task that fashion designers have struggled mightily with during two or three months. Many attractive styles have resulted, and perhaps an

Straight Line Frock of Velvet or Velveteen.

equal number that are not attractive. The ultra-tight skirt, on dresses in any event, is not approved, and comfortable fullness is let in either through the medium of plaits or gathers.

The dress shown in the sketch would develop extremely well in velvet or velveteen, if it is to be a real winter dress. If for earlier wear velvet or velveteen might be used for the bodice section and the cuffs and crepe meteor or satin for the remainder of the frock, or it might be developed in satin and serge.

If the supply of black satin and navy blue serge holds out women need have no fear in regard to apparel for the coming season, as from present indications these two are to be by all odds the most popular materials.

The back of this dress is cut exactly like the front. The long pointed panel effect into which the bodice is continued is important in that it gives length of line to the finished frock. Touches of metal or colored embroidery trim the bodice, which fastens with small, decorative buttons in the center front.

To make the dress one and a half yards of velvet or other material will be required for bodice and cuffs and four yards of any preferred material 36 inches wide for the gown proper.

When considering the cost of a dress or blouse on which embroidery is to appear as the trimming—if expense is a matter of moment—bends must be omitted. Beads have advanced in price from 100 to 400 per cent during the past few months, according to type of beads selected, is, steel, chalk, glass, etc. Buttons indicate their cost is still higher.

However, fortunately, one can struggle along very well without bead embroidery.

Embroidery will undoubtedly be used to a great extent as a trimming during the fall and winter season, but various braids are also favored, and pipings in contrasting color or fabric are being used.

Much Fur Next Winter.

Much fur is to be used this coming winter in the up-to-the-minute wardrobe, though where all the skins are to come from has not been told us. There will be entire short coats of fur, bound around the hips in a new way, with knife-plaited or box-plaited skirts of cloth or velvet.

One-piece gowns will have old-fashioned dolmans of fur fitted across the front by broad straps that wrap around the waist.

Capes of fur, lined with velvet or satin, will have deep waistcoats in front that hold them securely to the figure, and the skirt beneath will be plain or plaited.

NOT ALL HEROES AT FRONT

Manus Duggan, Twenty-Year-Old Irish Lad, Saves 25 Miners, but Loses His Own Life.

Not all the deeds of bravery are in the war zone. When a fire in the Speculator mine, near Butte, Mont., entombed several hundred men and brought death to 145 others, a twenty-year-old Irish lad named Manus Duggan, known as a "nipper boy," or tool boy, saved 25 miners by his coolness and self-sacrifice. But he paid for devotion to duty with his life. His body was taken from the mine five days later.

When the first flash of flames, smoke and deadly gas cut off all retreat from the mine, Duggan was caught with a number of companions in a distant tunnel. Reared in the mines at Butte, he knew every nook and turn in the underground workings. He guided a party of miners through the tunnels to a spot comparatively free from gas and fire. There he constructed a temporary bulwark. He had few timbers at hand, and principally put off the fire's approach by building a wall of dirt, rocks and clothing taken from his companions and the bodies of those who already had fallen victims to the fire. As fast as one temporary wall was thus constructed, he fell back with his charges and built another. He finally directed the party to a point where their rescue was effected by miners from above. Whether the boy turned back to seek others or was overcome while building his last defense against the rapidly approaching flames and gas, no one seems to know.

But he died at his post and his body was buried among the victims of the grim tragedy.

But what he did will never perish from the memory of 25 men who owe their lives to the "nipper boy," Manus Duggan.

A Vermont Genius.

New England, if we may accept the testimony of the Harwick (Vermont) Gazette, will not let itself be outdone by ancient Greece. Zeuxis, who painted grapes so naturally that the birds came to peck at them, has his worthy rival in Timothy Tripe, a Bellows Falls sign painter.

Tripe completed a mail-order course in sign painting a few days ago, and to show his skill, and incidentally to get a little free advertising, he painted a board fence on the side of a barn that faced on the main street. It was a success artistically, but it got Tripe into trouble.

It looked so natural that several farmers skinned their knuckles trying to hitch their teams to it, and num-

berless English sparrows wore themselves out trying to alight on it. They would slip down the side of the barn, hit the ground, assume a worried expression, and fly away.

The climax came recently. Tripe has a vicious bulldog, named Francis X. Bushman. The dog chased a book agent down the street. The stranger, in trying to get away, attempted to jump the fence, and drove his head into the barn. He recovered sufficiently to consult a lawyer, and a lawsuit may result.—Youth's Companion.

How Trenches Are Dug.

Each man in an officers' training camp is given an intrenching shovel, about the size of a big tablespoon, and a small pick. He is expected to dig his trench with those small tools. Each man must start lying flat on his stomach and dig himself into the ground. In about two hours an entire system of trenches, beginning with the skirmishers' trench, and ending with the reserve trench, is finished, together with the parapets in front to protect the men from the front to protect the men from the enemy's fire, and the parades behind to keep out pieces of bursting shell. After the men have dug their trenches down so they are out of range they sometimes get a shovel a little larger than their intrenching tool. That helps considerably, for the intrenching tool takes out about a quart of earth with each movement. Each man carries his intrenching tools on his back.

Love Schedule.

Girls in love ain't no use during the whole blessed week. Sunday's they're looking down the road, expectin' he'll come. Sunday afternoon they can't think of anything else 'cause he's here!

Monday mornings they're kind of sleepy and dreamy, and slimsy and good for nothing on Tuesday and Wednesday. Thursday they get absent-minded and begin to look off toward Sunday again, an' mope around and let the dishwasher get cold right under their noses. Friday they break dishes and go off in the best room and snivel an' look out of the window. Saturday they have queer spurts of workin' like all possessed, an' spurts of frizin' their hair. An' Sunday they begin it all over ag'in.—Coopersville Sun.

Joy Riding in Army.

Joy riding seems to be a regular sport of French army officers. According to charges of reckless extravagance made against the touring-car section of the French army, the officers think that the cars they use are their own private property. Indeed, competition is rampant, each officer wanting the best machine and the most expensive assortment of accessories, says the report. The cost of 25 cars for the gen-

eral headquarters staff cost \$170,000. Three thousand dollars is the annual upkeep per car. The only remedy, as France now sees it, is to refuse to allow any officer, no matter what his rank, to have a personal car.—Popular Science Monthly.

Living on Calories.

The cheapest eating in the world is rice and peanuts, measured by the calories, which constitute the only real test. The former costs five cents per 1,000 calories and the latter seven cents. So that if a person would eat a good helping of rice and wind up by a plentiful dessert of peanuts, he would get more muscle, brain, nerve and bone out of it than he would out of a diet of roast beef and potatoes. There is no attention paid to the value of food in practical living. Our sole guide is what hits our appetite, says the Ohio State Journal. We want what "we'd rather," as the poor woman told Jane Addams. It is going in and buying potatoes by the pile, without regard to the bushels or pecks. There is twice as much living in some kinds of foods as in others and yet we pass up our plate perfectly unconcerned whether it comes back with 500 or 1,000 calories. This is one reason we are poor.

Gases Used in Warfare.

A recent scientific report from Europe treats of the principal gases used for attack. These include chlorine, bromine, sulphur dioxide and formaldehyde. Chlorine and bromine have proved most effective, because of their great weight. They roll over the ground like water. These gases are released from compression tanks. The sulphur dioxide and formaldehyde are produced by burning the appropriate chemicals. There are many gases more deadly than those named, but in order to be effective for trench work the poison gas must have sufficient weight to stick to the ground. The gas mask has practically done away with the actual effectiveness of the gas attacks, but they are said to have considerable psychological effect still, many soldiers thinking they are "gassed" when they are only smelling the harmless vapors set up inside the gas masks.

AMERICAN STEAMER SUNK

Nine of the Lewis Luckenbach's Crew Reported Missing.

New York, Oct. 14.—News of the sinking of the American steamship Lewis Luckenbach by a German submarine off the coast of France was received here today in a cable message to the shipping firm of George Luckenbach, Inc., from the French agents. Forty-seven of the fifty-six

APPLES

4 1/2c Lb.

Nice Virginia Mountain Fruit, run of the orchard, medium to small sizes, sound and sweet. The price of 4 1/2c lb. is approximately 50c a peck. We are quoting by the pound to facilitate serving and to enable everybody to share justly in this big bargain.

Feed 'Em to the Children They're Wholesome.

THE MANNING GROCERY CO

members of the crew had been landed the message said, but one boat with nine men was missing.

The Luckenbach was bound for Havre with a general cargo. She was a steel screw vessel of 8,906 tons and was built in 1893.

AMERICANS DRILL IN RAIN

American Training Quarters in France, Oct. 13.—Gen. Rachitch, Serbian chief of staff, and Dr. M. E. Vesmitch, Serbian minister to France, have just spent two days with the American troops in training. They were much impressed by what they saw, particularly the bayonet drill, which is a mixture of English and American tactics, the English methods having been found to coincide closely with the American. Gen. Rachitch made a brief address to one section of the troops, thanking them for their demonstration.

Drills are being held in the rain, which has been steadily falling for the past eight days, giving American soldiers a taste of what their French and British comrades have been enduring for the last three winters.

ADVERTISE IN THE TIMES.

Children Cry FOR FLETCHER'S CASTORIA

A Good Opportunity!

Last year a bale of cotton would buy an acre of land—now it will buy two acres. One Dollar will buy only half as much meat and clothes, but will buy just as much land which makes the food and clothes. Prices of land have gone down in the past seven years and now they are going up.

Now is the opportunity for the wise man to become independent. Money is plentiful and land is cheap. Buy land.

We have a large number of tracts that will sell cheaper now than later.

A Few Bargains:

- 3 tracts of 25 acres each near Davis Station at \$50.00 per acre.
- 250 acres between Summerton and Manning at \$25.00 per acre.
- 500 acres in Fork at \$20.00 per acre.
- 112 acres near Foreston at \$15.00 per acre.
- 246 acres near Sammy Swamp at \$60.00 per acre.
- Numerous Town Lots and tenant houses in Manning.

The following large tracts belonging to Estate Moses Levi to be sold:

- The Seymore Lands.
- The Harvin Lands.
- The Callie Plowden Lands.
- The Chandler Lands.
- The Auld Lands.
- The Benbow Lands.

All the Lands of the Moses Levi Estate are

in Our Hands for Sale

If you want to buy or sell land write or call on us.
