MANNING, S. C.

Coast States from New Jersey southward to and including Florida. Certain species of wild duck, also protected under the act, were found to be destructive in the rice fields of California, and a special order was issued permitting rice growers to kill them out of season. In the Arkansas rice fields a special order had to be issued permitting the shooting of ducks at night. Meadow larks in South Carolina were found to be inflicting severe damage to sprouting corn and oats. In order to afford proper relief, says the chief of the Survey, permission has been given farmers to drive the birds from the fields with shotguns, if necessary. Complaints were received from Louisiana that night herons were a menace to the frogging industry, and it was suggested to the bureau that permission be granted to shoot them. Investigation, however, showed that about 96 per cent of the food of night herons is crawfish; not a single frog was found in any of the stomachs examined.

Other birds, not protected under the migratory bird treaty act, were also reported to be inflicting severe damage in some instances. Red-winged blackbirds in Ohio were found to be very destructive of sweet corn and eye of field corn. Poisoning methods effective for small fields, were devised, but it is necessary to discover more economical measures for large fields. Complaints of depredations by eagles were investigated. "It is evident," says the report of the chief, "that

these powerful birds are seriously destructive at times and their unlimited protection is probably not warranted." This applies to both the golden and the bald eagle. Charges came from the South Atlantic coast that the brown pelican was responsible for reduction in the number of mullet and other food fishes. Examination of a quantity of regurgitated material showed that of 814 fish eaten only 9 were of species valuable as human food.

one that stands out more prominently than any other, is the large number of men and women from different parts of the south who have recently reported astonishing results from its use.

One of the most recent to testify to the good results obtained from using FERROLAX, is Mr. C. D. Henry, who lives at 269 Lake Ave. Atlanta, Ga. While in conversation with a FERROLAX representative a few days ago, Mr. Henry said:—

"For several years I have been suffering with indigestion and stomach trouble. Not being able to eat the substantial food I needed to keep me going, I began badly run-down. I felt tired and worn out all the time, and my blood was not as healthy as it should be.

After taking many other medicines without relief, I commenced taking FERROLAX, and I just want to say right here that before I had finished my first bottle of this medicine I knew that I had struck the right thing at last.

Well, to make a long story short, FERROLAX fixed me up all right, and I am now enjoying the best of health. I am free from indigestion and stomach troubles, and never suffered a particle from constipation. I have plenty of good, rich, red blood in my veins now and just feel fine all the time. I gladly recommend FERROLAX to everybody.

Ferrolax is sold by Dickson's Drug Store, Manning; D. O. Rhame & Co., Summerton.

Get a bottle at this store today. Take it according to directions and if it does not do you the good you want come in and get your money back. Your bare word is good enough for us. Watch for the next issue of this paper and see what Ferrolax is doing for others.

WHAT THE DEPARTMENT OF AGRICULTURE IS DOING

Earnest effort to acquaint foreign people in this country with American ways of thought and living is being made this year by various agencies, including the extension service of the U. S. Department of Agriculture and the State agricultural colleges. Within the territory of nearly every county or home demonstration agent are to be found a greater or less number of people, living quite to themselves and speaking their native language almost entirely. These people from other lands are usually very appreciative of any effort made to teach them American ways, and they welcome instruction in the cooking of American foods, the making of American clothes, and even the growing of vegetables that thrive here.

In Lake Charles, La., is a Mexican community, which is as typically Mexican as if it were located in Mexico. The home demonstration agent in that parish has been endeavoring this year to bring about a change in living conditions. A sewing class has been organized and garden work encouraged. Previously, only two people in this Mexican community had ever had a garden. Among the things the mothers wished to learn was how to make American cookies. One of the women offered to teach the home economics worker how to make the finest of Mexican hot tamales if she would in turn teach her how to make American pastry. While they learn American cooking and sewing it is hoped that incidentally they will learn not only the American language but American ideas of living as well.

Working for More Pastures

The pasture problem in the coastal plain section of the South must be solved, says the United States Department of Agriculture, in order to bring about agricultural utilization of these lands. The problem has become increasingly important since the high prices of feeds are more and more forcing attention to the only cheap feed—pasturage. The Bureau of Plant Industry has recently done a great deal of work along this line. The investigators have confirmed the blue-grass-pasture experiments, in which it was shown that heavy pasturing was much the best method both agronomically and economically. Unfortunately, say the specialists, facilities for experiments and demonstrations are wholly inadequate in attempting to work out a system of bot-

ter handling of northern pastures. On the coastal plains of the South, unless the soils are much affected by drought continue the experts, carpet grass supplemented with lespedeza makes excellent pasture. Golden crown grass is also excellent. Efforts are being made, with the aid of new stripping machine, to place carpet grass seed on the market in adequate quantity. Several newly introduced grasses are promising as pasture possibilities.

Testing Asiatic Grasses

Numerous grasses and legumes secured by botanical explorations in central Asia may disclose species that will solve the problem of range improvement on semi-arid lands, according to the Bureau of Plant Industry, United States Department of Agriculture. There is a constant demand for grass that will increase the amount of feed above that which may be se-

cured by rational grazing of the land under fences, and specialists of the department are undertaking a systematic testing of Asiatic grasses and legumes.

It Pays to Grade Cotton

Texas growers producing cotton of good staple and marketing it cooperatively received from 1 1/4 to 8 cents more a pound for their cotton than was received for other cotton grown in the same community and sold by individual farmers, according to the Bureau of Markets, U. S. Department of Agriculture. Demonstrations have been made to acquaint producers with the desirability of classifying their cotton before sale and to show them how to use market quotations in determining the value of their crop. About 236,360 bales of cotton were classed in this work in Texas, Arkansas, North Carolina, Louisiana, Mississippi, and South Carolina during the cotton season of 1918-19.

Has Cotton Warehouse Designs

Standard cotton warehouse designs have been prepared by the Bureau of Markets, United States Department of Agriculture, and person adopting them are given cooperative supervision in an effort to promote the construction of warehouses in accordance with the most advanced ideas. This work should save insurance costs, says the bureau, and also aid in obtaining better warehouse service.

Destructive Birds Investigated

Now that the beneficial species of birds are fortified by ample protective legislation, the importance becomes apparent of perfecting methods for protecting crops against damage by birds, says the Chief of the Bureau of Biological Survey, United States Department of Agriculture. A policy of bird conservation that will best serve the interests of the farmer, he says, involves not only a thorough appreciation of the value of beneficial species but adequate attention to the control of troublesome ones. Following out that line of endeavor, investigations have been made of a number of species complained of as troublesome, and in some cases special rulings have been made under the migratory bird treaty act to permit control measures.

It has been determined that bobolinks, protected under the migratory bird treaty act, are as destructive as ever to rice when opportunity offers, and in order to control them an open season has been declared on bobolinks in Pennsylvania and the Atlantic
