CAN ENOUGH BEANS FOR NEXT WINTER'S USE

Hurry This Vegetable Form the Garden to the Can—Care Used in Following Directions More Than Compensated by Product Which Will Keep Well.

Plenty of string beans in jars in the store closet means that the basis for innumerable salads and vegetable side dishes is at the housekeeper's command all during the winter months so when this vegetable is at its best in the garden or on the market the wise woman cans enough for use when it is out of season. The following directions for canning string beans are given by the United States Department of Agriculture:

Select small, tender wax or green beans for canning purposes. Beans which have grown within the pod to any size are difficult to can, and the resulting product is not as satisfactory as one from younger beans. The

sooner the beans are in the jar after picking the better the flavor and the more certain they are to keep. Wash, string, and cut off the ends of the beans. Whole beans may be canned or they may be cut in short lengths. Those cut diagonally are attractive in appearance.

Fill Jars With Hot Brine.

Place the beans in a wire sieve or in cheesecloth and blanch (scald) in hot water or live steam for from 3 to 5 minutes, or until the pod will bend without breaking. On removal, drain well and pack into hot jars which have been boiled for 15 minutes. On the jars place rubbers which have been boiled in a solution of 1 tablespoon of soda to 1 quart of water.

Cover beans with a hot brine made from 4 level tablespoonfuls of salt to 4 quarts of boiling water. Put on top which has been boiled 15 minutes. With glass-top jars put one wire bail in position. Make screw tops about half tight. Processing beans under steam pressure is recommended. Quart jars should be processed 45 minutes under

pressure of 10 pounds. With a hot-water canner or with a home-made canner made out of a wash boiler or lard can process the jars three hours if the one-period procedure is used. Make sure the water is boiling before starting to count time. When boiled, tighten the covers and cool.

If the intermittent boiling procedure is used, boil for 1 hour on 3 successive days. Before each boiling loosen the covers. Tighten covers after each boiling. When the processing is finished, lift the jars from the canner. Cool in a spot free, from drafts; test, and store. In event of leakage when jar is tested, remove rubber, put on new, wet, boiled, one, and process 15 minutes more.

Vinegar aids in Preventing Spoilage.

During the past year the Home Economics Experimental Kitchen of the United States Department of Agriculture has been experimenting with the addition of a small amount of acid—vinegar—to honacid vegetables being canned. This work is being continued and the results thus far indicate that

1 to 4 tablespoons of vinegar added to a quart jar help greatly in reducing the amount of spoilage. When the vinegar is added, the time of processing can be reduced. For instance, it is found that corn, which ordinarily is difficult to call successfully, keeps well when 4 tablespoonfuls of vinegar are added to a quart jar processed 3 hours continuously. String beans, old peas, and spinach are other vegetables successfully canned by this method.

The addition of vinegar to canned vegetables in the amounts mentioned modifies to some degree the natural flavor of the vegetable, but the result is not objectionable to most people and in many instances is not noticed.

"FRIDAY IS MY HOODOO," SAYS MAN ON GALLOWS

Dallas, July 9.—Green Hunter, negro, was hanged in the county jail here today for attacking a white woman at Hele station, May 28 last, after admitting that he also was guilty of attacking another young white woman, for which crime Ben Perry, a negro, was sentenced to life imprisonment. Perry now is serving the eighth year of his prison term.

The criminal courts building was under heavy guard today as a precaution against possible attempts to prevent the execution.

"Friday has always been my hoodoo," Hunter was quoted as having said. He was born on Friday, the crime for which he was hanged today, Friday, was committed on a Friday, and he was convicted on Friday, June 4.

S. C. DEVELOPMENT BOARD

Columbia—Notices have been sent out from the office of the Secretary of the South Carolina Development Board of a meeting of the Board of Control of that organization to be held on Wednesday, July 14th. The meeting is called to consider and adopt new by-laws putting in effect the plan of reorganization and expansion which has been the basis of the Campaign for a State-wide membership.

Without awaiting the final result of the membership campaign, the process of reorganizing the Development Board upon a more widely representative plan is to be proceeded with. Following the meeting of the existing Board of Control and the adoption of the new plan of organization, meetings will at once be called of the members in each County throughout the State to select representatives on the new Board of Control. Then as the next step, the new Board of Control will be assembled and formulate a program of work, deciding the order in which various activities are to be taken up, and, in general, the scope of work for the ensuing year, now that the Development Board has been expanded and revitalized as a State promotional agency.

The new Board of Control will also elect the new Board of Directors to which the conduct of the affairs of the organization will be entrusted. Under the by-laws which have been prepared for adoption this Board of Directors will be constituted as follows: One Director to be appointed by the Governor of the State; one to be designated by the S. C. Division of the

American Cotton Association; one by the S. C. Division of the American Legion; one by the S. C. Bankers Association; one by the State Chamber of Commerce; one by the S. C. Live Stock Association; one by the S. C. Press Association and four to be elected by the members of the Board of Control from each congressional district.

This is a truly democratic form of organization and will insure the equal representation of all sections of the State.

It is too soon, as yet, to predict what chief activities the new Board of Control may decide shall be taken up first; but the recent campaign has disclosed that more interest is expressed throughout the State in the

problem of marketing than in any other one feature of the tentative program recently put forward by the State Campaign Committee. It is fair to assume, therefore, that this will receive first attention; but the development of the live stock industry; the promotion of a rational revision of the State system of taxation, and public health matters are likely to be other projects immediately taken up.

ECZEMA!
Money back without question if HUNT'S Salve fails in the treatment of ITCH, ECZEMA, RINGWORM, TETTER or other itching skin diseases. Try a 75 cent box at our risk.

STOP IN

and look over what we have to show you in our line next time you come to town. It may be you are not in the market just now for what we have for sale, but would give us the privilege and pleasure of showing you thru anyway. We will show you only such goods as will give you service. Prices and terms always in line. Stop with us when in town.

D. M. Bradham & Son.

The Zig-Zag Tread
Mechanically and scientifically correct for greatest security under all road conditions. The A and V shaped cups alternate on both sides of the extra wide, heavy tread. Skidding is minimized. Parallel Bar Base of the "Pine Trees" and straight Center Line of tread are thick rubber studs that assist in keeping the wheels "stead on."

Puncture-Proof with Every Cord-Quality

LEE Cord Puncture-Proofs are the only cord tires that can win an argument with steel.

Let the thinnest, toughest, sharpest nail or stoutest spike try to pierce the triple thickness of steel discs. They cannot pass. Your tube is safe. The cord construction is uninjured. Not a cord cut or weakened, for the steel discs are placed between the cords and the tread.

For eighteen months Lee Cord Punc-

ture-Proofs were subjected to the severest tests before being offered to the public. They were everything that a cord tire should be—not a single cord quality had been sacrificed to make them puncture-proof.

Let us show you the quality and construction of this remarkable tire.
