in quantities from ten tons and upwards. We have sold during the past ten days a large tonnage of this material, and while prices have advanced during the past week it is still cheap compared with other ammoniates. Get our prices before you buy.

MANNING OIL MILL.

finned to certain holiday seasons, as the demand for turkeys largely is, and that their value as egg producers is considerable, the importance of a few geese on a general farm becomes apparent.

Geese, in common with ducks, are utilizers of forms of feed confined to ponds and streams, but they are in that particular excelled by ducks. On farms where ponds or streams are available ducks will convert into meat and eggs great quantities of water insects and various aquatic forms that would not be utilized by any other kind of poultry. Ducks, while they consume much grass and other green stuff, are more partial to animal feeds and are very energetic in patrolling the branches, creeks, and ponds as sources of food supply, say poultry specialists in the United States Department of Agriculture. Where conditions are favorable they

will provide for their own good needs in a measure that will make them highly profitable.

ADVERTISE IN THE TIMES

ORDER QUEENS NOW

Clemson College, July 19.—Attention to bee-keepers is directed to the difficulty of obtaining queens on short order this season. It appears that a number of queen breeders have gone over to honey production because of the high price of honey at this time, say the Extension Service bee specialist, and it is necessary that all beekeepers desiring queens should place their orders promptly, as queens ordered now will probably not be delivered before August 5 to 10. A list of reputable breeders may be obtained from any of the beekeepers' magazines or from the Extension Service of Clemson College. It is advisable for beekeepers to cooperate and send club orders and thus receive considerable discount. Those who have failed to receive Information Card No. 10, should write for it because it furnishes a guide for all beekeepers who intend to require.

Great care should be exercised as to the places from which queens are ordered. The breeder should be a reputable one in order to get purely mated queens and to prevent the accidental introduction of European or American foul brood. So far as is known now, South Carolina is yet free from these injurious diseases.

BETTER DEAD

Life is a burden when the body is racked with pain. Everything worries and the victim becomes despondent and downhearted. To bring back the sunshine take

GOLD MEDAL HAARLEM OIL CAPSULES

The national remedy of Holland for over 200 years; it is an enemy of all pains resulting from kidney, liver and uric acid troubles. All druggists, three sizes. Look for the name Gold Medal on every box and accept no imitation.

E. C. HAMER IS ELECTED PRESIDENT COTTON ASSO.

Columbia, July 19.—R. C. Hamer, who was last week elected president of the South Carolina Division of the American Cotton Association to succeed Col. R. M. Mixson, resigned, has accepted the position. He has addressed the following statement to the members of the board of directors, the members of the cotton association and the people of South Carolina generally:

"On July 1, the Board of Directors of the South Carolina Division of the American Cotton Association honored me by electing me to the presidency of the division to succeed Col. R. M. Mixson, resigned. I was in the mountains of North Carolina at the time with my family and did not know of my election until the day afterwards. Had I been present, I would have protested against such action on the part of the Board, not that I am unwilling to serve the association in any way that I can, but because I feel that there are others in the State who are better fitted for the position than myself.

"Upon notification of my election, I stated my views along that line to individual members of the board but they would not hear to any talk of declination on my part. I have therefore consented to take up the duties and to discharge them to the best of my ability.

"Were I not convinced of the wonderful potentialities of the American Cotton Association I would not have considered taking the position to which I have been elected. I have studied the plans and purposes of the organization closely, together with its accomplishments, and I regard it as a very vital factor in the future life of the South, and indeed of the nation. I believe that it is really going to mean a new South. It is going to release us from the chains of commercial slavery that have held us bound fast for so, these many years.

"Already the association has been able to accomplish much. It has saved the South billions of dollars, having forced the speculators to pay the farmers a fair price for their cotton. In the passage of certain legislation, in securing recounts of the surplus crop, a classification of that surplus showing amount of unspinnable cotton on hand, in securing the erection of cotton warehouses, etc., it has accomplished something definite to which we can point with pride, has changed the viewpoint of the world towards the South.

"The formation of the American Cotton Association was really started in 1914. It has secured enormous benefits to the entire agricultural and commercial life of the South. This great association has completely changed the judgment of the world concerning cotton and the South. The world, as the results of the American Cotton Association, is thoroughly

convinced that the South will not longer produce and sell cotton at less than a profitable price; that the South has not been receiving a fair price for cotton for the last sixty years. Every minimum price recommended at the various annual conventions of the Association has been secured by the producer. The sinful waste resulting from the uneconomic handling of the American crop, resulting in the loss of one entire crop out of every ten, will be removed by the erection of warehouses, the securing of government graders and the formation of cooperative marketing associations. We have today the opportunity to complete this great work, which means the solution of the proper handling and marketing of our cotton crop. The completion of this work means that the manufacturers both at home and abroad, will send their representatives to the warehouses in the cotton fields of the South to purchase their cotton direct from the members of the Association. Your cooperation in this work means that all of these things will be accomplished, and that present and coming generations will receive wonderful benefits.

"I want to beg of the members of your committee and of the people of the State in general that they give me their heartiest support. The American Cotton Association, as I see it, is entitled to the hearty support of every man, woman and child that lives in the cotton growing section and that is interested in a business way in the South. The South is absolutely dependent upon the prosperity of the farmers. When he falls upon dark days our commercial life becomes stagnant. What benefits the farmer benefits everybody who lives in the South and everybody who does business in the South."

COSTS LITTLE TO KEEP GEESSE AND DUCKS ON GENERAL FARMS

Geese touch flanks with chickens in utilizing waste grain about the stables and feeding pens. In a larger measure than chickens or any other kind of poultry, they are grazing stock, taking their living in large part from the ordinary grasses of the pastures. When the facts are taken into consideration that the demand for geese is strong, steady, and extended over practically the whole year, not con-
