'Soil Surgeon' Declared Seedbed-Making Boon

Performs Multiple Work, Cuts Needed Time in Half

A new, efficient device for producing finer, smoother seedbeds is the "Soil Surgeon" now on the market.

Designed for use in a plowed field only, the device does the combined work of a double-disc, spiked toothed harrow and a float—and manufacturers declare it gives the farmer a finer, smoother seedbed in half the ordinary time.

The exclusive use of the soil surgeon after plowing does not turn up dormant weed seeds or plowed-under vegetation, thus giving a cleaner growing crop and richer soil. It levels the ground, fills all air pockets, and seals the moisture

This "soil surgeon" is designed for use in a plowed field only. It does the work of a double-disc, a spike-toothed harrow and a float—and is said to give you a finer, smoother seedbed in half the time.

in the soil, thereby making for quicker germination and a higher yield.

Sturdy and simple, the soil surgeon consists of two heavy steel pans with raised sides, to permit loading with dirt for added weight. These may be used singly or bolted together, depending on the desired width to be covered.

To the bottom of each pan are bolted 20 double-edged cultivator knives, each provided with a bearing to permit it to follow easily and automatically the tractor's line of travel. These heavy-duty knives slice the four and one-half inches of soil into one-inch strips, while the action of the pan pulverizes, smooths and levels the sliced soil in a way not approached by any other instrument currently in use on the farm.

The field should first be worked in the direction of plowing, using as many sections side by side as the tractor can pull with weight adjusted. The final finish is obtained by pulling the soil surgeon across the line of furrows. The soil surgeon should also be used as a crust breaker for all oncoming crops to mulch and kill small weeds.
